WHEREAS, Benjamin Leinhardt, for Estate of Elizabeth Fischer, owner, filed, November 20, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 50-60 Pennsylvania avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Pennsylvania avenue and Atlantic avenue are business districts and Fulton street is an unrestricted district; and

MINUTES

WHEREAS, the decision of the superintendent of buildings, rendered September 24, 1924, in acting on N. B. Application No. 18986-24, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 4. A garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of fireproof construction, one story in height above grade, with a frontage of 100 ft. and a depth of 100 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, the applicant has filed the duly acknowledged consents of the owners of 90 per cent of the property frontage deemed by the board to be affected.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be restricted in height to one story above street grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that the front elevation shall be finished substantially in accordance with the design of facade filed in this case, of finished brick, with architectural terra cotta or stone trimmings; that there shall be no roof signs erected or maintained on the premises and that there shall be no advertising display other than a projecting or flat sign, indicating the title of the garage business; that any gasoline storage equipment shall be located at the extreme northerly end of the street front of the building;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

1494-24-BZ.

APPLICANT—Leopold Phillipp, for 135 West 100th Street Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—133-135 West 100th street, Manhattan.

APPEARANCES—

For Applicant: Leopold Phillipp, Jacob Ruth and A. N. Gitterman.

For Opposition: Eva Landman and Samuel Jurmark.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon.....	7
Absent	0

THE RESOLUTION:

(1494-24-BZ)

WHEREAS, Leopold Phillipp, for 135 West 100th Street Corp., owner, filed, December 20, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 133-135 West 100th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 100th street, Amsterdam avenue and Columbus avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered November 28, 1924, in acting on N. B. App. No. 354-24, reads:

"13. Proposed public garage for more than five motor vehicles in a business district is contrary to Art.

II, Sec. 4, of the Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, four stories in height, with a frontage of 50 ft. and a depth of 90 ft. 11 in.; and

WHEREAS, the board deemed that a further invasion of this street by prohibited uses was not justified in view of the street being now almost in its entirety improved and occupied with tenement dwellings, and the structure now in course of erection as a warehouse under a permit issued by the bureau of buildings cannot be held to be unproductive of substantial return and therefore no facts as to condition of hardship were adduced or supported on the testimony presented at the hearing.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1528-24-BZ.

APPLICANT—William F. Doyle, for Keap Const. Company, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2847-2857 West 21st street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Maria Klippel.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell

Negative

Absent: Fire Chief Kenlon.....

THE RESOLUTION:

(1528-24-BZ)

WHEREAS, William F. Doyle, for Keap Const. Co., owner, filed, December 29, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 2847-2857 West 21st street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 21st street, West 20th street, Mermaid avenue and Neptune avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 17, 1924, in acting on Application No. 24489-24, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 4. The erection of a public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height above grade, with a frontage of 100 ft. and a depth of 118 ft. 9¾ in.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, the further invasion is comparable with the many now existing non-conforming uses.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be restricted in height to one-story structure above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that the roof shall be of flat design and construction, fire-retarded in accordance with the rules of the board of standards and ap-

MINUTES

peals; that the front elevation shall be finished with face brick, architectural terra cotta or stone trimmings; and, further, there shall be no roof signs erected or maintained; any skylights installed shall be glazed with plain glass, protected with wire guards above and below;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

16-25-BZ.

APPLICANT—John DeHart, for Wadbin Realty Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1204-1212 Webster avenue, The Bronx.

APPEARANCES—

For Applicant: John De Hart.

For Opposition: Louis Hemmerdinger and Wm. Sudbrink.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell 6

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(16-25-BZ)

WHEREAS, John De Hart, for Wadbin Realty Co., owner, filed, January 6, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises 1204-1212 Webster avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Webster avenue, north of a point 100 ft. south of East 168th street, business district, and Webster avenue, south of a point 100 ft. south of East 168th street, is an unrestricted district and East 168th street is a business district and Brook avenue is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 2, 1925, in acting on N. B. Application No. 16-25, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business and unrestricted districts is contrary to the provisions of the Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 124 ft. on Webster avenue, 100 ft. on East 168th street and a depth of 145 ft.; across the rear to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, under the provisions of section 7, subdivision B, the board is empowered to act.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a one-story structure above grade; that the gable walls shall be unpierced throughout their entire height and length; that there shall be no vehicular entrance on East 168th street or doorway other than one

emergency exit not exceeding 3 ft. 8 in. in width, and, any windows installed shall be equipped with fixed steel sash; that there shall be no roof signs erected nor any advertising signs or display maintained on the premises, other than one projecting sign on either or both street fronts, indicating the name or title of the garage business; that any gasoline storage equipment installed shall be located at the extreme southerly end of the Webster avenue front of building; that the elevations of street fronts shall be finished in face brick with architectural terra cotta or stone trimmings;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

29-25-BZ.

APPLICANT—William Shary, for Fidelio Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles and also the omission of a rear yard as required by the zone resolution.

PREMISES AFFECTED—511-515 East 80th street, Manhattan.

APPEARANCES—

For Applicant: William Shary and Winter Russell.

For Opposition: Alexander Arnold.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE:

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell.... 5

Negative 0

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(29-25-BZ)

WHEREAS, William Shary, for Fidelio Realty Corp., owner, filed, January 9, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles, and also the omission of a rear yard as required by the zone resolution; premises 511-15 East 80th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 80th street and Avenue A are business districts and East End avenue is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 1, 1924, in acting on N. B. Application No. 639-24, reads:

"1. Erection of a garage for more than 5 motor vehicles in a business district is contrary to Art. II, Sec. 4, of the Building Zone Resolution.

"2. A lawful rear yard should be provided.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories and basement in height, with a frontage of 75 ft. and a depth of 102.2 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there existed on this street between the intersecting streets on July 25, 1916, a stable for more than five horses.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the rear and gable walls shall be unpierced throughout their entire

MINUTES

height and length; that the building shall not exceed a height of two stories above grade; that the front elevation shall be finished in face brick, with architectural terra cotta or stone trimmings; that there shall be no advertising signs erected or displayed on the premises; that any skylights installed shall be glazed with plain glass, protected with wire guards above and below, and that no skylight shall be installed within 25 ft. of the rear wall; *granted on further condition* that the requirements of the building zone resolution as to rear yard and area restrictions shall be complied with in all respects;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

675-19-BZ.

APPLICANT—Szerlip & Szerlip, on behalf of Otto Heepe, owner.

SUBJECT—Application (previously denied) (re: order of fire commissioner) to permit in a residence district the maintenance of a garage, space in which is rented to persons not residing on the premises.

PREMISES AFFECTED—325-327 16th street, Brooklyn.

APPEARANCES—

For Applicant: Sidney Szerlip.

ACTION OF BOARD—Application dismissed without prejudice.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell.... 5

Negative 0

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(675-19-BZ)

WHEREAS, Otto Heepe, on behalf of Margaret A. Morrison, owner, filed, August 23, 1919, with the board of appeals, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage, space in which is rented to persons not residing on premises; premises 325-327 16th street, north side, 100 ft. west of Seventh avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its meetings on October 21 and November 18, 1919, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, applicant failed to appear at the public hearing and the application was dismissed for lack of prosecution, November 18, 1919, and applicant appeared before the board and stated that his non-appearance was due to a misunderstanding of the time of hearing, and requested a reopening of the case, which request was granted by vote of the board; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, January 20, 1920, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 16th street is located in a residence district and that Seventh avenue is located in a business district; and

WHEREAS, the decision of the fire commissioner, dated August 1, 1919, is contained in Order No. 53421-LC, which reads:

"With reference to your application, for a permit to maintain a garage at the above location, I regret to inform you that I am without power to grant such a permit for the following reasons:

"Maintenance of your garage is a violation of section 3 of article 2 of the Building Zone Resolution of the Board of Estimate and Apportionment of the City of New York adopted July 25, 1916, inasmuch as garage is not an accessory to residence on lot, and

motor vehicles stored are for sale, for rent, or for hire or are subject to charges for storage. * * *.

"You are, therefore, ordered to remove all motor vehicles, the fuel tanks of which are not empty, stored by others than the occupants of dwelling on lot where garage is situated.";

and

WHEREAS, the premises consists of a plot of ground on which are located a number of buildings and shed, occupied as stable and garage; and

WHEREAS, this application was denied by the board at its meeting, January 20, 1920, and applicant, through his attorney, requested a reopening of the case, which request was granted by vote of the board; and

WHEREAS, the applicant has obtained a certificate of occupancy from the superintendent of buildings for the existing occupancy of the premises and the board deemed that the matter should be submitted to the fire commissioner for consideration as to issuance of necessary permits.

Resolved, that the application be and it hereby is *dismissed*, without prejudice, for further consideration by the fire commissioner as to certificate of occupancy issued by the superintendent of buildings subsequent to the action of the board, January 20, 1920.

1482-24-BZ.

APPLICANT—Louis A. Sheinart, for Adelheen Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—204-208 East 97th street, Manhattan.

APPEARANCES—

For Applicant: Louis A. Sheinart.

For Opposition: Nathan D. Stern, Samuel Ecker, Charles Novello and eight other objectors.

ACTION OF BOARD—Application denied.

CONDITIONS—As specified in resolution.

THE VOTE TO GRANT—

Affirmative: Mr. Gunnison 1

Negative: Chairman Walsh, Messrs. Kennedy, Dowd and Connell 4

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(1482-24-BZ)

WHEREAS, Louis A. Sheinart, for Adelheen Realty Corp., owner, filed, December 17, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 204-208 East 97th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 97th street, Third avenue and Second avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 9, 1924, in acting on N. B. App. No. 678-24, reads:

"1. A public garage may not be erected in a business district. (Section 4, Art. II, Zoning Resolution.)";

and

WHEREAS, the proposed building is to be of fireproof construction, four stories and cellar in height, with a frontage of 81 ft. and a depth of 100 ft. 11 in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, no facts were adduced at the public hearing

MINUTES

in substantiation of the basis of this application under section 21.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

892-24-BZ.

APPLICANT—John E. Murphy, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1356 St. Mark's avenue, Brooklyn.

APPEARANCES—

For Applicant: John E. Murphy.

For Opposition: Annie Cohen and Joseph Sumpter.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT:

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell 6

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(892-24-BZ)

WHEREAS, John E. Murphy, owner, filed, July 3, 1924, an application under the building zone resolution, to permit on an interior lot, in a residence district, the erection and maintenance of individual garages, spaces to be rented out to persons not residing on the premises; premises 1356 St. Marks avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that St. Marks avenue and Prospect place are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered June 19, 1924, in acting on N. B. App. No. 13185-24, reads:

"Denied—Proposition contrary to the Zone Resolution, Art. 2, Sec. 3 (8). The erection of garages in a residential district not accessory to the residential use of the lot;"

and

WHEREAS, the premises consist of an interior lot, approximately 300 ft. long and 30 ft. wide, having an exit to St. Marks avenue. It is proposed to erect eighteen individual garages (in four units) thereon, and rent them to persons not residing on the premises; and

WHEREAS, the board deemed that the erection of the proposed structure in the rear of the private residence would constitute a nuisance.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

200-25-BZ.

APPLICANT—William H. Gompert, for Board of Education, City of New York, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in an "F" area district also in a residence district the erection and maintenance of a public school nearer than fif-

teen (15) feet from the street line, contrary to section 16, subdivision (a) of the zoning resolution.

PREMISES AFFECTED—134-01 to 134-19 Cronston avenue, Belle Harbor, Borough of Queens.

APPEARANCES—

For Applicant: William H. Gompert and James J. Buckley.

For Opposition: Mrs. May.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and

Connell 6

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(200-25-BZ)

WHEREAS, William Gompert, for Board of Education, City of New York, owner, filed, February 18, 1925, an application, under the building zone resolution, to permit in an "F" area district the erection and maintenance of the street wall of a public school, nearer than fifteen (15) feet from the street line; premises 134-01 to 134-19 Cronston avenue, Belle Harbor, Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the area district maps accompanying the building zone resolution show that the premises are located in an "F" area district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 22, 1925, in acting no N. B. Application No. 275-25, reads:

"1. Contrary to Zoning Resolution in that building is erected nearer than 15 feet to the building line of street;"

and

WHEREAS, the proposed building is to be of fireproof construction, three stories in height, with a frontage of 185 ft. and a depth of 97 ft. 11 in.; to be occupied as a public school, the east and west street walls setting back 7 ft. 6 in. from the building line instead of 15 ft. as required by the building zone resolution; and

WHEREAS, it appears that more than 60 per cent of the entire plot area will be maintained as an open, unoccupied yard, and there would be hardship in compelling applicant to set these street walls back, necessitating a change in the entire design of the school.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the street walls on Beach 134th and Beach 135th streets shall be set back not less than 7 ft. 6 in. from the building line; that the requirements of the building zone resolution shall be complied with in all other respects;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the construction work prosecuted to completion without interruption or suspension.

Adjourned, 2:30 p. m.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Superintendents Brady, Reville, Kleinert, Moore and McDermott 10

Negative 0

Absent: Mr. Kennedy, Fire Chief Kenlon and Deputy Fire Commissioner Hannon .. 3

THE RESOLUTION:

(1484-24-S)

WHEREAS, Samuel Rosenblum, for Maurice A. Frey, owner, filed, December 18, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 76 West Houston street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 63423-LD, dated August 2, 1924, reads:

MINUTES

"1. Extend the interior stairway at the west side of building to the roof, as per Section 271 of the Labor Law.

"1. Arrange the fire escape on the front of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards & Appeals * * *.

"NOTE: Among the defects noted on this fire escape are the following:

"Windows on course not fireproof, self-closing. No counterbalanced stairway to street. No stairway from roof of 4th story level to balcony at 3rd story."

and

WHEREAS, the building is non-fireproof, three and five stories in height, 21 ft. 8 in. by 70 ft. in area at 1st, 2nd and 3rd stories and 21 ft. 8 in. by 24 ft. in area at 4th and 5th stories. OCCUPIED as follows: 1st floor, mfg. radio cabinets, 7 persons; 2nd floor, mfg. hats, 9 persons; 3rd floor, will have occupancy of about 10 persons (vacant at present); 4th floor, stain radio cabinets, 4 persons; 5th floor, polishing radio cabinets, 3 persons. EXITS: An interior wooden stairway extending from the 1st to top story; enclosed in fire resisting partitions, with metal-covered doors at openings; a fire escape (with non-fireproof windows along the course thereof) on the front of the three-story portion of the building, having a gooseneck ladder to roof and drop ladder in guides to street; on the front of the 4th and 5th story section—there is a balcony on the 5th story with an 85 degree ladder to roof of main building; roofs of adjoining building to west (at 5th story section) is 5 ft. higher and to east two stories higher; and

WHEREAS, petitioner proposes to provide a 60 degree stair to replace the 85 degree ladder extending from 5th story balcony to main roof, a gooseneck ladder to roof of 5th story portion of premises; to provide, also, on the fire escape on the three-story section, a 60 degree connecting stair to roof of main building and to counterweight the existing drop ladder in guides; and

WHEREAS, it appears that the factory occupancy has been vacated.

Resolved, that the petition be and it hereby is *dismissed* as the order is not enforceable at this time.

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Superintendents Brady, Reville, Kleinert, Moore and McDermott 11

Negative 0

Absent: Fire Chief Kenlon and Deputy Fire Commissioner Hannon 2

THE RESOLUTION:

(1520-24-S)

WHEREAS, John David, lessee, filed, December 26, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 125-127 West 42nd street, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated December 9, 1924, and December 17, 1924, read:

"Order No. 69576-LD—December 9, 1924:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, * * *.

"Among the defects noted on this fire escape are the following:

"No stairway from top balcony to roof.

"No stairway from lowest balcony to ground.

"No safe passageway to the street from the termination."

"Order No. 70149-LF—December 17, 1924:

"1. Install an adequate interior electric fire alarm system in accordance with the Rules of Board of Standards and Appeals and the enclosed approved layout;"

and

WHEREAS, the premises consist of two non-fireproof buildings, having openings (protected with fireproof doors) in the dividing wall on each story; each building being five stories and basement in height, and each building being 20 ft. by 100 ft. in area at the 1st story and 20 ft. by 90 ft. in area above. OCCUPIED as follows: No. 125—Basement, storage; 1st and 2nd stories, clothing store; 3rd story, musical instruments; 4th story, showrooms; 5th story, mfg. neckwear; 19 persons above the 1st story. No. 127—Basement, vacant at present; 1st story, store; 2nd story, showrooms; 3rd story, offices; 4th story, busheling; 5th story, dentist; 19 persons above the 1st story. EQUIPPED with a fire alarm signal system. EXITS: An interior fireproof stairway, in the westerly section of the building, extending from 1st story to the roof, enclosed in fireproof partitions with fire doors at openings; a party wall fire escape balcony, taking in one window on each side of the division wall, on the rear of building, at the 3rd, 4th and 5th stories, with connecting stairs and a gooseneck ladder to roof; ROOFS of adjoining buildings are about 15 ft. lower; and

WHEREAS, petitioner proposes to provide a fire escape balcony on the 2nd story rear of No. 127 and connect with the balcony on the 3rd story; to extend this 3rd story balcony to the east and to provide stairs connecting to the 3rd story balcony on premises No. 123 West 42nd street and also to provide additional means (on fire escape on No. 123) of exit to yard; and proposes further to provide an opening in the easterly wall of No. 125 leading from yard of No. 123 and also to provide in the basement, an opening, in the division wall, leading to No. 127; and contends that the existing gooseneck ladder affords ample egress from upper balcony to roof.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted* as to Order No. 69576-LD on condition that the existing fire escape balconies on the rear of the 3rd and 4th and 5th stories are provided with 60 degree stairways, with a gooseneck ladder from the top story balcony to the roof; with iron stairway from roof of extension at rear of No. 125 to the balcony of No. 123; that a 60 degree stairway shall be provided from the roof of the extension of No. 127 to the roof of the extension of No. 125, all openings on course of fire escape of No. 125-127 to be fireproof, self-closing, except the stained glass openings on the rear of the 2nd story of No. 125; and that the occupancy shall not exceed 25 persons on each story, above the 1st story; *denied* as to Order No. 70149-LF.

Negative 0
Absent: Fire Chief Kenlon and Deputy Fire Commissioner Hannon 2

THE RESOLUTION:

(1454-24-S)

WHEREAS, Croker National Fire Prevention Engineering Co., for Irving Ruland, owner, filed, December 9, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 35-37 Ann street and 104-108 Nassau street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 16, 1924, reads:

"1. Extend the interior stairways at the centre of building to the roof, as per Section 271 of the Labor Law, said extension and the landings and passageways connecting therewith to be enclosed on all sides with partitions of fire resisting material extending at least 3 ft. above the roof, as per Section 271 and 272 of the Labor Law and Rule 2 of the Industrial Code.

"2. Enclose the interior stairways at the centre of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the 1st story to 3 ft. above the roof, constructed as per Section 271 of the Labor Law and Rule 2 of the Industrial Code.
* * *

"3. Provide an additional means of exit from the cellar, said exit to be located at the Ann Street side of building in accordance with the requirements of the Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories and cellar in height, 42 ft. by 39 ft. (irregular) in area; separated into two sections by a fore and aft brick wall having a horizontal opening on the 2nd story; OCCUPIED as a tenant factory, 37 persons above the 1st story; the cellar of the easterly section being used for printing, 2 persons. EXITS: An interior wooden stairway extending from 1st story to top story in the westerly section and also one in the easterly section, extending from the 2nd story to top story; both are enclosed in wooden partitions with wooden doors at openings, and two iron ladders from top story to scuttle in roof; a fire escape on the Ann street front of the building extending from the top story to 2nd story balcony, with counterbalanced stair to street; ROOFS of adjoining buildings, to north 7 stories higher, to south five feet higher; and

WHEREAS, petitioner contends that, in view of the light occupancy of the building, the existing means of exit are adequate and in re: to Item No. 3 of the order, proposes to provide an iron ladder leading from the areaway in the easterly section of the premises, to Ann street.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition, as to Items Nos. 1 and 2, be and it hereby is granted on condition that the stairhall on the westerly side of the dividing brick wall be enclosed in fire-retarding partitions, from the cellar to the roof, with fireproof self-closing doors at openings, and that a fixed double-rung iron ladder or stairway be provided from the top story hall to a scuttle in the roof and a double rung iron ladder be maintained in top story hall of easterly section; and granted as to Item No. 3 on condition

that an engineer's ladder be provided in the easterly section from the cellar to the sidewalk on the Ann street side; and that this variation shall be granted so long as conditions as to use and occupancy remain unchanged.

Negative 0
Absent: Fire Chief Kenlon and Deputy Fire Commissioner Hannon 2

THE RESOLUTION:

(46-25-S)

WHEREAS, John H. Knubel, for Estate of P. E. Guerin, owner, filed, January 12, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 16 Horatio street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 29, 1924, reads:

"1. Provide an additional required means of exit on 2nd floor of the building, remote from the existing stairway, preferably located at the south side of the building, in accordance with the requirements of Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories in height, 25 ft. by 95 ft. in area at 1st story and 25 ft. by 90 ft. in area above; OCCUPIED as a piano factory, 6 persons on the 2nd story and 10 persons above. EXITS: An interior wooden stairway extending from 1st story to top story, with iron ladder to scuttle in roof; enclosed in wooden partitions; no doors at openings; a sub-standard fire escape on the front of the building, extending from the 4th story to 2nd story balcony with drop ladder in guides to street; and also fireproof passageways on the 3rd and 4th stories connecting with building to the south; ROOFS of adjoining buildings are 10 ft. higher; and

WHEREAS, petitioner contends that an adequate secondary means of exit is provided on the 2nd story by means of a door at the rear, west, leading to a fireproof extension roof at premises No. 23 Jane street (under same ownership), thence across roof to door leading to premises No. 21 Jane street (also under same ownership), and thence to street.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that an exit be provided at the rear of the 2nd story to the roof of the extension of premises No. 23 Jane street; that iron steps and platform be provided at the westerly end of the 2nd story with openings to the roof of extension to west, with egress therefrom over the roof of No. 23 Jane street, with egress into No. 21 Jane street; that an opening be provided in the parapet wall, or necessary steps be provided to take up the difference in level; and that the occupancy shall not exceed 25 persons above the 1st story.

Absent: Fire Chief Kenlon and Deputy Fire Commissioner Hannon 2

THE RESOLUTION:

(53-25-S)

WHEREAS, John J. Sammon, for Patrick J. Mooney, owner, filed, January 12, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 209 West 34th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 3, 1924, reads:

"Order No. 59238-LD:

"1. Provide an outside iron balcony fire escape on the south side of building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from the ground to the highest story, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals.

"2. Extend the interior stairway at the east side of building to the roof, as per section 271 of the Labor Law."

and

WHEREAS, the building is non-fireproof, three stories in height, 17 ft. by 99 ft. in area at the 1st story and 17 ft. by 50 ft. in area above. OCCUPIED: 1st story, stationery store and printer, 5 persons; 2nd story, furrier, 5 persons; 3rd story, artist, 3 persons. EXITS: An interior stairway, fireproof on the 1st story and wooden above, extending from 1st story to top story, with iron ladder to scuttle in roof, enclosed in fireproof partitions on the 1st story and wood lath and plaster above, with wooden doors at the openings; ROOFS of adjoining buildings are at the same level; and

WHEREAS, petitioner contends that in view of the light occupancy of the premises that the existing means of exit are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item 1, on condition that a balcony be provided on the rear of 3rd story of the building with a gooseneck ladder to the roof and 60 degree iron stairs to the roof of the extension immediately at the rear; and granted, as to Item 2, on condition that a fixed, double-rung iron ladder be provided from the closet on the top story to the roof, with no door at the opening of said closet; and this variation shall be granted so long as conditions as to use and occupancy remain unchanged.

55-25-S.

PETITIONER—Jno. B. Snook Sons, for Estate of Thomas Lewis, owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—623 Broadway, Manhattan.

APPEARANCES—

For Petitioner—John W. Boylston.

For Administration: Inspector Maher, of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Superintendents Brady, Reville, Kleinert, Moore and McDermott 10

Negative 0

Absent: Mr. Connell, Fire Chief Kenlon and Deputy Fire Commissioner Hannon.... 3

THE RESOLUTION:

(55-25-S)

WHEREAS, Jno. B. Snook Sons, for Estate of Thomas Lewis, owner, filed, January 12, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 623 Broadway, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered December 26, 1924, in acting on Alt. Application No. 2703-24, reads:

"3. Fire resisting partitions should conform to Labor Law. Both sides should be protected by fire resisting material."

and

WHEREAS, the building, running through from street to street, is non-fireproof, five stories in height, 34 ft. by 200 ft. in area; OCCUPIED as a tenant factory, 39 persons above the 1st story; EQUIPPED with a fire alarm signal system. EXITS: Two interior wooden stairways, the Broadway front stairway unenclosed on the 1st story and both stairways are unenclosed on the 5th story and at all other stories both stairways are enclosed in partitions composed of two thicknesses of 7/8 in. boards with sheet iron on the loft side, with metal-covered wooden doors at openings; ROOFS of adjoining buildings to south, four stories higher and to north, seven stories higher; and

WHEREAS, petitioner proposes, in lieu of the wire lath and Portland cement on 2 in. by 4 in. studs as required by rule 504 of the industrial code, to fire-retard the existing partitions by means of applying furring strips, 16 in. on center on the loft side of the present enclosure, then wire lath and 3/4 in. Portland cement, space between furring strips packed with mineral wool, all in accordance with plans filed with this case, and proposes, also, to enclose the stairways on the 1st story, Broadway front, and both stairways on the 5th story with standard fire-resisting partitions and also to provide two iron ladders from top story to scuttle in roof.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that the hall side of the existing stairhall partition be fire-retarded with V-ribbed metal lath and cement mortar, and that the loft side be stiffened with 2 by 2 angle irons, 3 ft. on center, with metal-covered self-closing doors at openings.

70-25-S.

PETITIONER—Samuel Rosenblum, for Marx & Rawolle, owners.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—9 Van Brunt street, Brooklyn.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher, of fire department.

ACTION OF BOARD—Petition granted on condition.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Superintendents Brady, Reville, Kleinert, Moore and McDermott 10
Negative 0
Absent: Mr. Connell, Fire Chief Kenlon and Deputy Fire Commissioner Hannon.... 3

THE RESOLUTION:

(70-25-S)

WHEREAS, Samuel Rosenblum, for Marx & Rawolle, owner, filed, January 17, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 9 Van Brunt street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated November 13, 1924, reads:

"1. Extend both interior stairways to the roof, as per Section 271 of the Labor Law.

"2. Extend the interior stairway from the 3rd to the 4th story and from the 2nd story to the 1st story at the north side of building "C" as per Section 271 of the Labor Law."

and

WHEREAS, the premises consist of two non-fireproof buildings, separated by a fore and aft brick wall with horizontal openings therein (protected with fireproof swinging doors) on each story, each four stories in height; there being an iron storage shed on the roof of building "D"; building "C" being 34 ft. 8 in. by 50 ft. and building "D" being 26 ft. by 50 ft. in area; OCCUPIED for the manufacture of shellac, the maximum occupancy of both buildings being 10 persons; EQUIPPED with a sprinkler system. EXITS: A wooden stairway in building "C" extending from the 2nd to 3rd stories; a wooden stairway in building "D" extending from the 1st story to top story, enclosed in wooden partitions with wooden doors at openings; a 60 degree fire escape on the rear of the building extending from yard to 4th story balcony with gooseneck ladder to roof; windows along course of the fire escape are non-fireproof; EGRESS from yard by means of passageway to street; and

WHEREAS, petitioner contends that practical difficulties (large tanks taking up the greater part of the floor area) make it impractical to extend, in either direction, the stairway in building "C," and contends, further, in view of the small occupancy, that the existing means of exit are adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the exits as indicated on plans filed with this petition are maintained, and that buildings C, D and E and the building to the north on Van Brunt street remain under one control and operation, and this variation shall be *granted* so long as conditions as to occupancy remain unchanged.

Absent: Mr. Connell, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott

THE RESOLUTION:

(73-25-S)

WHEREAS, International Coffee Co., owner, filed, January 19, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 533 Greenwich street and 99-101 Van Dam street Manhattan; and

WHEREAS, the orders of the fire commissioner, dated October 8, 1924, read:

"Order No. 65916-LD:

"1. Arrange the fire escape on the south side of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"Among the defects noted on this fire escape are the following: Windows on course not fireproof, self-closing. Not screened to height of 4 ft. 6 in. No steps to window sills provided. No counterbalanced stairway from lowest balcony to ground. Connecting stairs are not placed at angle of 45 degrees. No connection of top balcony to roof.

"2. Enclose the interior stairway at center of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire-resisting material extending continuously from the 1st story to 2 ft. above the roof, constructed as per Section 271 of the Labor Law or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law."

"Order No. 65918-LD:

"1. Arrange the entrance doors at street so as to open outwardly, as per Section 271 of the Labor Law."

and

WHEREAS, the building is non-fireproof, seven stories in height, 25 ft. by 100 ft. in area; OCCUPIED for roasting, packing and storing of coffee, 13 persons in the entire building; the means of egress consisting of an interior stairway at the center of the building, extending from the 1st story to the roof, enclosed in wood studs covered both sides with 26 gauge metal; an interior stairway at the Van Dam street front extending from the 1st story to the 2nd story, with fire escape on the Van Dam street front of building, with balcony connected by 60 degree stairs, with gooseneck ladder to roof and drop ladder to street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the main occupancy is on the 2nd story from which there are three means of exit; that in the 1st story there are three exit doorways giving direct access to the street; that the upper portion of the building is used for storage only, with two persons working on the top story, and that the means of egress are adequate for the small occupancy.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Order No. 65916-LD, Item 1, *on condition* that the fire escape be maintained with 60 degree connecting stairs, and that the casement doors thereto shall not be less than 5 ft. high, with gooseneck to roof and counterbalanced drop ladder in guides to street; *denied* in all other respects; and *granted*, as to Item 2, *on condition* that the occupancy above the 4th story shall not exceed two persons; and that the petition be and it hereby is *denied* as to Order No. 65918-LD, Item No. 1.

THE RESOLUTION:

(75-25-S)

WHEREAS, Wm. F. Doyle, for 132 West 31st Street Realty Corp., owner, filed, January 19, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 128-136 West 31st street and 127-133 West 30th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered January 15, 1925, in acting on N. B. Application No. 179-24, reads:

"14. All windows must be provided with self-closing device. Industrial Code, Rule 503.";

and

WHEREAS, the building is fireproof, 17 stories in height, 125 ft. by 197 ft. in area; OCCUPIED for lofts and offices, variable number of employees; EQUIPPED with a sprinkler system. EXITS: Three interior fireproof stairways, extending from the 1st story to the roof, enclosed in fireproof partitions with fire doors at the openings; ROOFS of adjoining buildings to east are 13 stories lower, to west no buildings; and

WHEREAS, petitioner proposes to provide self-closing devices only on such windows which form an exposure and which are within 30 ft. of any other opening in another building or within 50 ft. of a neighboring roof.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that any windows that constitute exposures within 30 ft. horizontally and 50 ft. vertically of openings on roofs of adjoining building shall be equipped in accordance with the requirements of the building code.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Superintendents Brady, Reville, Kleinert and Moore 9

Negative 0

Absent: Mr. Connell, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 4

THE RESOLUTION:

(90-25-S)

WHEREAS, Otto L. Spannhake, for Adolph Klar, owner, filed, January 22, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 5 East 19th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered January 21, 1925, reads:

"2. Egress to street from termination of fire escape should comply with Section 273 of Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 92 ft. in area at 1st story and 25 ft. by 82 ft. in area above; OCCUPIED as a tenant factory, 44 persons above the 1st story. EXITS: An interior fireproof stairway extending from 1st story to roof; enclosed

MINUTES

in fireproof partitions with fire doors at openings; a fire escape (with fireproof windows along the course thereof) on the rear of the building extending from the roof to 2nd story fire escape balcony; ROOFS of adjoining buildings to east same level, to west 50 ft. higher; and

WHEREAS, petitioner proposes to extend the fire escape balcony, on the 2nd story, to the east, taking in one window on premises No. 7 East 19th street, and contends that this will afford adequate exit from the termination of the fire escape.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that a standard fire escape be provided on the rear with party wall balcony at the 2nd story level, connecting to No. 7, embracing not less than two plain glass windows on No. 7; and that this variation shall be *granted* so long as conditions as to use and occupancy remain unchanged.

111-25-S.

PETITIONER—Samuel Rosenblum, for Union Photo Engraving Co., lessee of 3rd floor; Werner Bros., lessee of 6th floor, and Art Craft Photo Engraving Co., lessee of 7th floor.

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—260-262 West 41st street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenbloom.

For Administration: Inspector Maher, of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Superintendents Brady, Reville, Kleinert and Moore 8

Negative 0

Absent: Messrs. Holland and Connell, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

THE RESOLUTION:

(111-25-S)

WHEREAS, Samuel Rosenblum, for Union Photo Engraving Co., lessee of 3rd story; Werner Bros., lessee of 6th story, and Art Crafts Photo Engraving Co., lessee of 7th story, filed, January 26, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 260-262 West 41st street, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated November 25, 1924, read:

"Order No. 68522-LD:

"1. Remove all partitions not built of incombustible material as per Section 263 and 270 of the Labor Law."

"Order No. 68510-LD:

"1. Remove all partitions not built of incombustible material as per Sections 263 and 270 of the Labor Law."

"Order No. 68511-LD:

"1. Remove all partitions not built of incombustible material as per Sections 263 and 270 of the Labor Law.";

and

WHEREAS, the building is fireproof, eight stories in height, 50 ft. by 99 ft. in area. OCCUPIED: 1st story, stores; 2nd story, storage of uniforms; 3rd story, photo engraving; 4th story, printing; 5th and 6th stories, manufacturing of jewelry; 7th story, photo engraving; 8th story, storage of ink; approximately 35 persons per story; EQUIPPED with a fire alarm signal system. EXITS: Two interior stairways, both extending from the 1st story

to the roof, both enclosed in fireproof partitions with fireproof doors at openings; ROOFS of adjoining buildings to east three stories lower, to west five stories lower; and

WHEREAS, petitioner contends that the greater part of the partitions in question are dwarf partitions of a temporary nature and that they do not obstruct the exits.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the partitions around show rooms, office and entrance hall to office and show rooms, *on condition* that the upper portion of said partitions shall be glazed with thin glass not less than 18 in. below ceiling; that exit door not less than 36 in. wide shall be provided in said partition, leading from workroom and opening out to exit hall; that an exit sign at least 8 in. in height shall be erected and a red light placed over such door, in addition to other means of exit; that on any floor occupied by more than one tenant, the subdividing partitions shall be arranged so as to allow independent egress to all required means of exit for each tenant; that the partition separating one tenant from another shall extend from the floor to the ceiling; that all interior partitions, excepting show room, office and entrance hall partitions, shall be constructed of incombustible material as specified under subdivisions A to H of section 355 of the Building Code, or any approved fireproof partition; and that the occupancy and use shall remain substantially unchanged.

113-25-S.

PETITIONER—Samuel Rosenblum, for Alice L. Kravigny, owner.

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—51 Vesey street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher, of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Superintendents Brady, Reville and Kleinert 8

Negative 0

Absent: Mr. Connell, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendents Moore and McDermott 5

THE RESOLUTION:

(113-25-S)

WHEREAS, Samuel Rosenblum, for Alice L. Kravigny, owner, filed, January 26, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 51 Vesey street, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated October 24, 1924, read:

"Order No. 66708-LD:

"1. Reduce the number of persons employed above the 1st story to (22) as per resolution of the Board of Standards and Appeals, calendar 1467-18-S, and properly paint the fire escape on front of building with at least two coats of paint or provide an outside iron balcony fire escape on the front of building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from the ground to the highest story, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with Section 271 of the Labor Law.

"REMOVE the substandard fire escape on the rear of the building or reconstruct same in accordance with

MINUTES

Section 274 of the Labor Law, as per rules of the Board of Standards and Appeals, amended May 9, 1924."

"Order No. 66710-LF:

"As inspection of the premises 51 Vesey Street, Borough of Manhattan, shows that a fire drill should be established and maintained therein according to the requirements of Section 279 of the Labor Law, the Labor Law specifically charges the Fire Commissioner with the duty of enforcing the provisions of the law, as to fire drills.

"This law holds the owner of such premises responsible for the proper supervision and maintenance of fire drills. It is, therefore, your duty to organize and maintain a fire drill in the above premises in accordance with the rules and regulations of the Board of Standards and Appeals."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 81 ft. in area at the 1st story and 25 ft. by 75 ft. in area above; OCCUPIED as a printing establishment. 1st story, 15 occupants; 2nd story, 10 occupants; 3rd story, 12 occupants; 4th story, 7 occupants; 5th story, 5 occupants. EXITS: An interior wooden stairway, extending from the 1st story to the top story (with iron ladder to scuttle in roof), enclosed in wood board partitions with wooden doors at the openings; a 60 degree fire escape on the front of the building, with fireproof windows along the course thereof, extending from the top story to the 2nd story balcony, with counterbalanced stairway to street; a sub-standard fire escape on the rear of the building, with non-fireproof windows along the course thereof, extending from the top story to the 3rd story balcony, with a connection therefrom to extension roof of adjoining premises to west; ROOFS of adjoining buildings to east, two stories lower, to west one story lower; and

WHEREAS, petitioner contends that many of the employees operate presses and serious loss would be involved if same were to be stopped prematurely by operators who were to take part in the fire drill, and proposes to install an interior fire alarm signal system throughout the building, and contends further that the existing means of egress are adequate for the number of employees on the premises.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Order No. 66708-LD, on condition that a gooseneck ladder to the roof be provided from the top story balcony of rear fire escape; and granted, as to Order No. 66710-LF, on condition that an interior fire alarm system be installed; and that the occupancy shall not exceed 25 persons above the 2nd story.

APPLIANCES SUBMITTED FOR APPROVAL.

1395-24-SA.

PETITIONER—Ralph B. Carter Co.

SUBJECT—Approval of Deming Power Rotary Force Pump.

APPEARANCES—None.

ACTION OF BOARD—Petition laid over to April 21, 1925, at 2 p. m.; not reached before adjournment.

154-25-SA.

PETITIONER—Edwards & Co.

SUBJECT—Approval of Edwards Solenoid Type Bell.

APPEARANCES—None.

ACTION OF BOARD—Petition laid over to April 21, 1925, at 2 p. m.; not reached before adjournment.

Adourned, 5:30 p. m.

EDWARD V. BARTON, Acting Secretary.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES—SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, April 7, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided

throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and

PUBLIC HEARING

sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. *When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.*

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, *except when tanks of unlimited capacities are supported on structures altogether independent of buildings.*

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting structures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the side-

PUBLIC HEARING

alk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. *An automatic electric fire pump is an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.*

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. *For the purpose of computing the capacity of water supplies, standard one-half (1/2) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.*

Rule 10. Fire Area. *A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.*

Rule 11. Fire Department Connection. *All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections where the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].*

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3 1/2) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3 1/2) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr." etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (1/2) inch pipe connection and one-half (1/2) inch orifice and a bronze ball of proper size, or by a three-quarter (3/4) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. *Automatic sprinkler systems shall be classified as:*

(a) *One Source Systems, supplied with water from any one of the automatic sources; and*

(b) *Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a*

PUBLIC HEARING

direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;
- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—
 - 25 feet in 5 to 12 foot bays.
- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing. Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed six-

teen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

PUBLIC HEARING

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of

joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1	2 heads
$1\frac{1}{4}$	3 "
$1\frac{1}{2}$	5 "
2	10 "
$2\frac{1}{2}$	20 "
3	36 "
$3\frac{1}{2}$	55 "
4	80 "
5	140 "
6	200 "
7	300 "
8	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$	2 heads
$1\frac{1}{2}$	3 "
2	4 "
$2\frac{1}{2}$	6 "
3	9 "
4	18 "
5	34 "
6	51 "
7	75 "
8	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$	2 heads
2	3 "
$2\frac{1}{2}$	4 "
3	6 "
4	12 "
5	21 "
6	40 "
7	60 "
8	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

PUBLIC HEARING

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, 48.
- (b) For Conran* one (1) inch heads, 12.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other

parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the building are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

PUBLIC HEARING

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] *In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.*

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower

PUBLIC HEARING

than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

Rule 33. Approval of Sprinkler System [Tests]. Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. Non-fireproof Business Buildings. Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. Dangerous or Hazardous Buildings. Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. Factories and other Buildings. Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. Theatre Buildings. Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. Firework Storage. Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. Nitro-Cellulose Products. Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. Inflammable Motion-Picture Films. Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. Existing Installations and Approvals. Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. Communicating Openings. When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

PUBLIC HEARING

Rule 43. Maintenance Inspections. Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises

a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. Open Sprinklers. When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

RULES

RULES FOR THE CONSTRUCTION AND INSTALLATION OF GAS SHUT-OFF VALVES, ADOPTED BY THE BOARD OF STANDARDS AND APPEALS, JANUARY 11, 1924.

RULES FOR GAS SHUT-OFF VALVES TO COMPLY WITH ORDINANCE AMENDING ARTICLE 2 OF CHAPTER 12 OF THE CODE OF ORDINANCES, RELATING TO CONTROL OF GAS IN CERTAIN BUILDINGS IN CASE OF FIRE.

1. Gas shut-off valves and accessory appliances shall include valves approved as such by the Bureau of Standards, Washington, D. C., by the Underwriters' Laboratories, Inc., Chicago, Ill., by the Associated Factory Mutual Laboratories of Boston, or other recognized standard laboratory; and all valves shall be approved and meet the test prescribed by the Board of Standards and Appeals.

2. Gas shut-off valves shall be installed only by corporations, firm or individuals who shall furnish evidence of their qualifications under the Code of Ordinances, to the Fire Commissioner or the Tenement House Commissioner in their respective jurisdictions.

3. Such corporations, firms, or individuals shall maintain a Service Station which shall be in direct communication with the Fire Department by telephone or telegraph. Location of service station and means of communication shall be on file with the Fire Commissioner, in order that the Fire Department may insure immediate service when the gas is turned off by the members of the Fire Department or from any other cause.

The Fire Department shall have exclusive use of gas shut-off valves to be operated in the event of fire or other emergencies.

4. All gas shut-off valves to be installed must be made of the best quality of standard materials.

Protection of Valves:

5. The gas shut-off control shall be protected by a suitable, approved metal box, placed on the exterior of the building, which shall be connected, through a rigid metal conduit, by a cable, with the valve body placed on the gas intake where the gas pipe enters the building, and as near as practicable to the inside face of the wall, before reaching the meters. The lock for securing box on outside wall of building shall be operative only by a Fire Department inner box key by members of the Fire Department.

6. All valve bodies shall be made of brass or bronze. If a spring is used to actuate a valve in conjunction with the fusible link, it shall be of the best quality phosphor bronze.

7. The internal mechanism which acts to shut off the gas shall be securely connected with the external mechanism by a direct mechanical connection, made gas tight, where it passes through the valve body, by a stuffing box filled with soft, well-lubricated packing, in accordance with recognized standard practice.

Installation:

8. The valve shall be so installed as to be conspicuously displayed and readily inspected and reset by authorized persons.

Valves shall be located so that condensation will not accumulate in the valves; and shall be installed so that gas will flow through the valve in direction indicated on it.

9. Valves shall be secured in piping by threaded connections or companion flanges. Combustible packing or sheet lead shall not be used between flanges.

10. The gas main at both ends of the valve must be rigid and secure to withstand the pull from the control handle. Additional non-combustible brackets or hangers must be provided, if necessary, to secure and maintain rigid installation.

11. The valve shall be enclosed in a substantial, perforated metal case, conspicuously exposed, painted red, protected by standard lock acceptable to the Fire Prevention Bureau, and shall indicate the name, telephone number and address of installer, to insure prompt service to property owner.

12. Casing of the valve on gas intake shall be kept locked to protect valve from interference and make it accessible only to authorized persons. Perforations, to allow circulation of air around fusible link, shall be provided and so arranged as to prevent tampering with valve when casing is locked.

Control Box:

13. The control handle for the manual closing of the valve shall be in a locked metal control box having a cast iron cover conspicuously labeled with raised letters, painted red.

14. On the outside of the cover or the inside of the control box, in raised or stamped letters, or on a securely fastened metal plate, shall be displayed concise operating directions, together with the name, initials or registered trademark of the manufacturer.

15. The control box must be placed as nearly vertically above the point where the gas main enters the premises as is practicable, when this does not involve excessive length of cable and extra turns, and at a height above the sidewalk or grade, of not less than two (2) feet and not more than five (5) feet. Without special permission, the control box shall not be placed or mounted on basement window frames, or directly above basement windows or other openings, nor shall it be located behind doors or other obstructions which would prevent the Fire Department from having easy access to it.

16. Control boxes must be securely and permanently fastened. Whenever possible, they shall be fastened to a non-combustible wall, pillar or column. They shall be secured by not less than two 3/16 inch bolts or the equivalent. Unless the building is so constructed that the control box must unavoidably be secured to a wooden part, the use of wood screws is not permitted for supporting countersunk control boxes; lag bolts shall be used. When the walls are of masonry or concrete, through bolts, expansion bolts or toggle bolts shall be used. All fastenings must be arranged so that they cannot be loosened except from inside opening of the control box.

RULES

17. Control boxes may be set or recessed into the wall to a depth not greater than the depth of the box so that cover is flush with the face of the wall. Control boxes may be mounted directly on the surface of the wall.

18. The control box shall be located on the outside of the building wall, facing the street, whenever possible. When the control box is installed on an alley face of a building, or in a similar place where the control box is subject to injury from passing vehicles, etc., the control box must be thoroughly protected. This may be done by having the control box recessed, marked by waterproof red paint ring and waterproof white paint ring on the wall, or, when such protection is not available, protected by heavy iron channels or angles secured to the wall by through bolts, expansion bolts, or toggle bolts.

Control Handles:

19. Control handles shall be of standard construction, arranged to fit the control boxes so that they may be locked without difficulty, and cable connections shall be securely made in an approved manner, according to the design of the handle.

Cable:

20. The connection between the valve and control handle shall be as direct as practicable, and shall consist of a single piece of stranded phosphor bronze cable not less than 3/32 inch in diameter. No splices in the cable shall be permitted.

21. It is essential that cable connections to valve and handle be securely made according to the design in each case. The cable may be slightly annealed for making ends, and when cutting the cable, it should be taped and cut through the tape, or a small amount of solder applied where it is to be cut, so as to prevent frayed end.

Conduit:

22. The control cable for the shut-off valve shall be run in galvanized wrought iron or steel pipe or other standard approved conduit not less than 1/2 inch in pipe size. The pipe or conduit line must be water-tight and continuous from the casing enclosing the operating mechanism of the valve to the control box on outside of building. The cable shall not be exposed at any point in its length.

23. All ends of pipe or conduit, not only at valve and control box terminals, but in the run of the piping, shall be carefully reamed so as to remove burrs and fins caused by cutting-off tools, which would interfere with the movement of the cable in the run, or cut, or wear the cable. Unions should not be employed in making joints.

24. Pipe or conduit must be rigidly and permanently secured in position. Pipe straps and hangers of standard forms may be employed for this purpose. In every case supports must be provided at points sufficiently numerous to prevent sagging. Pipe straps (if used) must be of metal of sufficient thickness to insure a permanent fastening and must be thoroughly coated to prevent corrosion.

Bends and Offsets:

25. Bends of small radius or through much of an arc, introduce possibilities of binding of the cable or of an appreciable friction resisting the pull of the cable; therefore, approved roller fittings shall be required wherever the pipe or conduit is bent to a radius of less than 4 inches, or wherever the bend is through an arc exceeding 15 degrees, except as outlined for offsets.

26. When connections to control boxes are made from below, it is frequently necessary to make an offset in the conduit to avoid a water table or other part of a building wall. One offset of not more than 2 inches will be permitted for each installation at such points. The bends in the pipe forming the offsets must be carefully made to avoid cracking the enamel or galvanized coating, or the flattening or cracking of the pipe or conduit. The amount of offset shall not exceed 2 inches and the length of the offset shall not be less than five times the amount of the offset. For example, a 2-inch offset must be at least 10 inches long. Single offsets only shall be permitted. Double offsets are not acceptable.

Roller Fittings:

27. For turns in the conduit greater than those mentioned above, approved roller fittings shall be used. No roller fittings turning more than 90 degrees from a straight line shall be used.

Automatic Control:

28. The fusible link which controls actuation of the valve in the event of direct heat, shall melt at not less than 225 degrees F. and shall be so arranged as to in no way interfere with the manual means of shutting off the gas which is controlled by the handle in box placed on the face of the building. Only approved fusible links shall be used. Automatic control shall in no way depend upon electric current for its operation.

Production Tests at Factory:

29. Valves must be tight under the following tests:

(a) Valves shall be mounted in the position in which they are designed to operate. Normal city gas pressure or equivalent air pressure shall be applied to the inlet side and the valve shall completely shut off the gas or air when closed as in normal operation.

(b) To determine whether the valve shuts off tightly under this test, a tube shall be connected with the outlet side of the valve and the outer end of the tube shall be immersed in water to a depth not exceeding one (1) inch, indicating leakage by bubbles rising through the water from the end of this tube.

(c) Valves, after this test, shall be capable of shutting off ten (10) pounds air pressure applied to the inlet side; to determine whether the valve is tight, the test procedure shall be as indicated in the preceding test.

(d) Valve bodies shall be strong enough to withstand, without leakage, one hundred (100) pounds pressure applied from either end with the other end closed. In this test the entire valve, including the stuffing box, shall be completely immersed in water, so that leakage will be indicated by bubbles rising through the water.

(e) The fusible link connections of each valve shall be carefully tested to avoid prematurely operating the gas shut-off valve through vibration or concussion. The construction of the fusible link connections shall be so designed and made that the automatic feature will not operate through vibration or concussion.

(f) The entire process of manufacture of the valves shall be subject to inspection and review and each valve shall be tested at the factory by a recognized laboratory or agency with facilities for making the test prescribed by the Board of Standards and Appeals, and each valve must bear satisfactory evidence that it has been so tested.

(g) Manufacturers of gas shut-off valves must submit the name or names of said laboratories or agencies to the Fire Commissioner or the Tenement House Commissioner, in their respective jurisdictions, with satisfactory evidence of their ability and facilities to properly carry out said tests.

(h) Valves and operating mechanisms shall be so designed and constructed that they will withstand the deteriorating effects or corrosion, as evidenced by operating tests.

Installation and Inspection Tests:

30. a. After shut-off valve is installed, it shall be set and operated to determine that proper closure is secured by operating the control handle. Particular care should be taken to observe that when operating the control handle, no part of the cable or of its attachment to the valve interferes in any way with the positive closure of the valve.

b. After the above test, all gas outlets in the building must be inspected to insure their being closed before the valve shall be set and the gas turned on. Valve and connections shall also be tested for leaks by applying a solution of soap and water to all parts, including connections to gas piping.

RULES

c. After the valve has been used to shut off gas, it shall be reset only by authorized corporations, firms or individuals, or by members of the Fire Department.

d. Operating and installation corporations, firms or individuals responsible for the installation of the gas shut-off valves shall permanently maintain properly equipped service stations in each of the boroughs where they install valves.

Gas shut-off valves and installations shall be inspected at least once a year by members of the Fire Department or the Tenement House Department, in their respective jurisdictions, or by corporations, firms or individuals authorized to install gas shut-off valves, as determined by the Fire Commissioner or the Tenement House Commissioner, in their respective jurisdictions.

RESERVE CALENDAR

BOARD OF STANDARDS AND APPEALS.

Appliances Submitted for Approval.

- 53-21-S—Angle Hose Valve.
- 1372-21-S—Ford Fire Line Reducing Valve, approval of.
- 337-22-S—Elkhard Brass Company, Siamese Connection, approval of.
- 357-22-S—Quinn Acme Crude Oil Burner, approval of.
- 392-22-S—The Surface-Combustion Company Low Pressure Gas and Oil Burner, approval of.
- 447-22-S—Howard Water Pressure Reducing Devices, approval of.
- 610-22-S—Crocker Gas Valve, approval of.
- 799-22-S—Kennell Gas Cut-Off Valve, approval of.
- 957-22-S—Burnwell Mechanical Burner, approval of.
- 1104-22-S—Dean Fuel Oil Pump, approval of.
- 1105-22-S—Combustion Fuel Oil Burner, approval of.
- 1173-22-S—Anti-Syphon Valve, approval of.
- 1230-22-S—Thermostats for Automatic Fire Alarm Systems, approval of.
- 1249-22-S—Coen Oil Burner, approval of.
- 1274-22-S—Rodriguez Oil Burner, approval of.
- 1391-22-S—Dempsey High & Low Pressure Fuel Oil Burner, approval of.
- 1395-22-S—Caloroil Burner, approval of.
- 1526-22-S—Delaney Fuel Oil Burner, approval of.
- 57-23-SA—Collin Patent Automatic Gas Cut-Off Valve, approval of.
- 92-23-SA—Surface Combustion Low Pressure Fuel Oil Burner, approval of.
- 123-23-SA—Todd Steam Atomizing Fuel Oil Burner, approval of.
- 124-23-SA—Master Gas Shut-Off Valve, approval of.
- 125-23-SA—Packless Gas Shut-Off Valve, approval of.
- 127-23-SA—S. & K. Gas Shut-Off Valve, approval of.
- 232-23-SA—Manual and Thermal Gas Cut-Off Valve.
- 275-23-SA—Wm. E. Toelle Manual & Automatic Gas Shut-Off Valve, approval of.
- 279-23-SA—Heil Standard 200 Gal. Truck Tank.
- 297-23-SA—"Automatic" Deluge Valve, approval of.
- 345-23-SA—Cornell Falat Oil Burner, approval of.
- 392-23-SA—"Billow" Class G. R. Oil Burner, approval of.
- 393-23-SA—"Billow" Class C. R. F. Oil Burner, approval of.
- 397-23-SA—Cornell No. 1 Type "A" Oil Burner, approval of.
- 443-23-SA—Automatic Gas Shut-Off, approval of.
- 525-23-SA—Tilman-White Gas Cut-Off Valve, approval of.
- 544-23-SA—Domestic Fuel Oil Burner, approval of.
- 628-23-SA—Powerlight Oil Heat Burner, approval of.
- 820-23-SA—Morse Fuel Oil Burning System, approval of.
- 888-23-SA—Lewis Oil Burner, approval of.

NOTICE OF REMOVAL

APR 13 1925

NOTICE IS HEREBY GIVEN THAT THE
BOARD OF STANDARDS AND APPEALS IS
NOW LOCATED ON THE TENTH FLOOR OF
THE MUNICIPAL BUILDING, ROOMS 1001
TO 1015—NORTH END OF BUILDING.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.

Special meetings as listed in this Calendar.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

Board of Standards and Appeals, as listed in the Cal-
endar.

All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013 on *Tuesday, April 7,*
1925, at 2 o'clock. At this call each case is set for hearing
on a definite day.

The next subsequent Call of the Calendar will be on
Tuesday, April 14, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

THE RESOLUTION:

(1436-24-A)

WHEREAS, Deiches & Goldwater & Flynn, for Adams, Wertheimer Co., Inc., lessee, filed, December 4, 1924, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 2501-5 Grand Concourse, The Bronx; and

WHEREAS, the orders of the fire commissioner, dated November 14, 1924, read:

"No. 66746-F:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars, and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.

"Such standpipe shall be kept constantly filled with water by means of an approved tank or pump supply and to be ready for use at all times * * *."

"No. 66747-F:

"1. Provide a separate and distinct system of Automatic Sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

"No. 66748-F:

"1. Provide iron or kalameined shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at west side of building, or other approved protection, as per Sec. 375, Article 18, Chapter 5 of the Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, two and four stories in height, having a frontage of 120 ft. on Fordham road and 93 ft. 4 in. on Grand Concourse, irregular in shape; OCCUPIED as a department store; and

WHEREAS, there are eight windows on the 2nd story, in the west wall, rear, within 30 ft. of openings in the wall

of an apartment house to the west; and

WHEREAS, appellant contends that the building is amply provided with exits, that it faces on three street fronts, and, also, that it is equipped with a watchman service and fire alarm boxes.

Resolved, that the order of the fire commissioner, No. 66746, be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition*, and only so long as the present area and dimensions of the building shall remain substantially unchanged; that the orders of the fire commissioner, No. 66747, and No. 66748, be and they hereby are *affirmed*, and the appeal as to these orders be and it hereby is *denied*.

1357-24-A.

APPELLANT—Bertram L. Kraus, for Eva K. Moller, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—14 West 40th street, Manhattan.

APPEARANCES—

For Appellant: William B. Delacey.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE RESOLUTION:

(1357-24-A)

WHEREAS, Bertram L. Kraus, for Eva K. Moller, owner, filed, November 18, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 14 West 40th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 20, 1924, reads:

"1. Provide iron or kalameined shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at south side of building, or other approved protection, as per Section 375, Article 18, Chapter 5 of the Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, six stories in height, 25 ft. by 98 ft. in area at 1st story and 25 ft. by 88 ft. in area above. OCCUPIED: 1st story and basement, shoe store, 6 persons; 2nd story, dealer in books, 6 persons; 3rd story vacant at present; 4th story, tailors, 4 persons; 5th story, mimeographing, 19 persons; 6th story, diamond merchants, 5 persons; and

WHEREAS, there are three windows on each story above the 1st story within 30 ft. of openings in the wall of a building to the rear; and

WHEREAS, appellant contends that the building to the rear is a fireproof building, protected by a sprinkler system and the windows therein, forming the exposure, are fireproof windows; and

WHEREAS, the openings in the building within the area of exposure, immediately to the rear, are protected and the building is sprinklered.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the stipulations set forth in the resolution under Cal. No. 1356-24-S, reading:

"Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that the factory occupancy shall be discontinued on or before March 31, 1926, and that a balcony fire escape (section 273, L. L.) shall be provided at window sill

MINUTES

...vel, the fireproofing of the windows on the course of the fire escape may be omitted, with egress from lowest balcony by ladder to balcony of fire escape of building to the east, and that the doors leading to the stairway on the 5th story shall be made to open out."

shall be complied with; and that the factory occupancy shall be discontinued on or before March 31, 1926.

1474-24-A.
APPELLANT—Samuel Rosenblum, for 540 Realty Co., Inc., owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—536-546 West 23rd street, Manhattan.

APPEARANCES—
For Appellant: Samuel Rosenblum.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:
(1474-24-A)
WHEREAS, Samuel Rosenblum, for 540 Realty Co., Inc., filed, December 15, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 536-46 West 23rd street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 28, 1921, reads:

"1. Replace the missing and defective shutters with proper iron or kalameined shutters at all openings in the exterior wall above the first story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at east, south and west sides of building, or other approved protection as per Section 375, Article 18, Chapter 5, of the Code of Ordinances.";

and
WHEREAS, the building is non-fireproof, four stories in height, 150 ft. by 98 ft. 9 in. in area. OCCUPIED: 1st story, pipe cutters; 2nd story, mfg. of paper boxes, 18 persons; 3rd story, mfg. of fibre cases, 30 persons; 4th story, dyeing establishment, 16 persons; and

WHEREAS, there are six windows in the easterly wall of the building on the 3rd and 4th stories within 50 ft. of the rear of an adjoining two-story building; in the southerly wall there are 18 windows on the 2nd and 3rd stories and 11 windows on the 4th story within 30 ft. of openings in buildings to the south; and 6 windows on all stories above the 1st story in the westerly wall within 30 ft. of openings in the adjoining building to the west; and

WHEREAS, appellant contends that all of the windows in the six-story building to the south are fireproof; and that all the windows in the southerly wall of the westerly section of the building under appeal are protected with fire shutters excepting on the 4th story; that the windows (excepting those along the course of the fire escape, which are fireproof) in the building to the west are protected with fire shutters; and that the building in question is only four stories in height and protected with a sprinkler system.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted so far as it affects the openings in the rear wall; and denied so far as it affects the openings in the easterly and westerly gable walls.

1515-24-A.
APPELLANT—John Lemkau, owner.
SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—678 East 133rd street, The Bronx.

APPEARANCES—
For Appellant: John Essom.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell and Holland.. 5
Negative: Fire Chief Kenlon 1
Absent: Mr. Kennedy 1

THE RESOLUTION:
(1515-24-A)

WHEREAS, John Lemkau, owner, filed, December 24, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 678 East 133rd street, The Bronx; and

WHEREAS, the order of the fire commissioner, dated October 7, 1924, reads:

"You are hereby notified that an inspection of premises No. 678 East 133rd Street, Bronx, used as a non-storage garage, shows that the following must be done before permit requested by you can be issued:

"2. Separate boiler from remainder of building by unpierced wall of solid masonry at least 8 inches in thickness. Entrance to boiler room to be from exterior of building only. Section 159-1, Chapter 10, Code of Ordinances.";

and
WHEREAS, the building is non-fireproof, two stories in height, 25 ft. by 100 ft. in area at 1st story and 25 ft. by 40 ft. in area above. OCCUPIED: 1st story, boiler room (enclosed in 1/2 in. plaster boards covered with 24 gauge sheet metal) and milk distributing station, and incidental thereto, as a non-storage garage for two trucks; 2nd story, occupied as dwelling by owner; and

WHEREAS, appellant contends that there is no gasoline stored on the premises other than that in the tanks of the trucks and that hardship would result if compelled to carry out the order; and

WHEREAS, there are two intervening partitions between the boiler room and garage on the premises which are fire-retarded.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the runway side of the partition in garage area shall be protected with plaster boards and 26 in. gauge metal, with not more than one doorway provided with a tin-clad door; and that there shall be no gasoline storage equipment maintained on the premises.

72-25-A.
APPELLANT—John Powell & Co., Inc., sub-lessee.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—189 Water street, Manhattan.

APPEARANCES—
For Appellant: George R. Rinke.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

THE RESOLUTION:
(72-25-A)

WHEREAS, John Powell & Co., Inc., for Alfred M. Rau, owner, filed, January 19, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 189 Water street, Manhattan; and

MINUTES

WHEREAS, the order of the fire commissioner, dated December 30, 1924, reads:

"Order No. 27131-LC:

"1. Provide glass bottles of a capacity not exceeding four ounces each, or metal cans of a capacity not exceeding one gallon each, the latter fitted with a screw top so made that the can will be air-tight when closed for combustible mixtures.";

and

WHEREAS, the building is non-fireproof, four stories in height, 20 ft. by 82 ft. in area at the 1st story and 20 ft. by 60 ft. in area above; OCCUPIED for the storage of crude drugs, 8 persons in the entire building; and

WHEREAS, appellant proposes to store two 50-gallon steel drums of an insecticide having a kerosene base, and contends that this liquid is not a finished product, that it is sold only in bulk to dealers who after adding other substances put it in small packages for retail consumption.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that not more than two (2) fifty-gallon steel drums of insecticide shall be stored on the premises at any one time, located in the basement, at the extreme front of cellar, with direct egress therefrom by means of stairs to the street.

83-25-A.

APPELLANT—Henry J. Nurick, for Bernard Greenthal, owner.

SUBJECT—Appeal from decision of fire commissioner. PREMISES AFFECTED—491-501 Bushwick avenue, Brooklyn.

APPEARANCES—

For Appellant: Henry J. Nurick.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative: Mr. Dowd 1

Negative: Chairman Walsh, Messrs. Gunnison, Connell, Holland and Fire Chief Kenlon 5

Absent: Mr. Kennedy 1

THE RESOLUTION:

(83-25-A)

WHEREAS, Henry J. Nurick, for Bernard Greenthal, owner, filed, January 21, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 491-501 Bushwick avenue, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered January 9, 1925, reads:

"1. Standpipe system cannot be omitted since building exceeds an area of 10,000 square feet within exterior walls of building.";

and

WHEREAS, the building is fireproof, two stories (26 ft. 2 in.) in height, 100 ft. by 122 ft. 5 in. (approximately 11,500 sq. ft. within walls) in area; OCCUPIED as stores in the 1st story, Bushwick avenue front, and the remainder of the premises is occupied as a public garage; and

WHEREAS, appellant contends that the building is low in height, that there are two city fire hydrants immediately in front of the premises and that the building is accessible to the fire department from two street fronts.

Resolved, that the decision of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

258-25-A.

APPELLANT—Wm. Wirt Mills, Department of Plants and Structures, for City of New York, owner.

SUBJECT—Appeal from decision of fire commissioner. PREMISES AFFECTED—278-290 Avenue C, Manhattan.

APPEARANCES—

For Appellant: F. P. McDuffy.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Connell, Gunnison, Holland and Fire Chief Kenlon 6

Negative 0

Not Voting: Mr. Kennedy 1

Absent 0

THE RESOLUTION:

(258-25-A)

WHEREAS, William Wirt Mills, for the City of New York, owner, filed, March 6, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 278-290 Avenue C, Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered February 13, 1925, reads:

"7. The average number of sprinkler heads per floor being about 700, the tank capacity of 40,000 gallons now provided is insufficient, and, since the tank capacity required is any way greatly in excess of 25,000 gallons, Rule No. 5 requires that the capacity required shall be specified by the Board of Standards and Appeals and therefore the question must be referred to said Board.

"8. By Rule No. 15 the 8 in. dead riser now provided may only serve for 420 heads, and as the average number per floor is about 700, this question also must be referred to the Board.

"9. While Rule No. 12, B, permits the combination of any two automatic sources for a "two source system", it does not specifically permit such a combination to be acceptable for a "one source system" and, therefore, the proposed combination of the 40,000 gallon gravity tank and 8 in. dead riser portion of the system with the other portion consisting of the two direct connections to the city water supply and one of the auxiliary sources, to wit, the 1,500 gallons per minute fire pump as a compromise for a "One Service system" must be referred to the Board of Standards and Appeals, for decision.";

and

WHEREAS, the proposed building is to be fireproof, ten stories in height, 173.7 ft. by 346.3 ft. from the 1st to the 7th story and 173.7 ft. by 330.6 ft. in the upper stories in area; to be OCCUPIED as a repair shop, 50 persons per story; the building being equipped with approved standpipe system and a sprinkler system, supplied from a 40,000-gallon tank with an 8 in. dead riser, three siamese connections on the street front, three supply pumps and one fire pump, the system being fed two ways from a 6 in. main on Avenue C and a 12 in. main on East 16th street, there being an average of 700 sprinkler heads per story; and

WHEREAS, the appellant contends that the tank is of ample capacity, the 8 in. dead riser is adequate and the source of supply is also ample.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the sprinkler system shall comply with the rules in all other respects; and that an approved standpipe system shall be installed and maintained.

THE RESOLUTION:

(1438-24-BZ)

WHEREAS, Jos. M. Smith, for Leading Auto Top Co., owner, filed, December 5, 1924, an application, under the building zone resolution, to permit in a business district the maintenance of a motor vehicle repair shop; premises 605 Fourth avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 31,

MINUTES

1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fourth avenue is a business district and 17th street and 18th street are residence districts; and

WHEREAS, the order of the fire commissioner, dated February 28, 1924, reads:

"Order No. 86688-LC:

"1. Discontinue the maintenance of a motor vehicle repair shop on the premises, the use of the premises for the repairing and manufacturing of automobile tops and side curtains constitutes a motor vehicle repair shop.

"This order is issued for the reason that the maintenance of the use or occupancy referred to above is a violation of the Building Zone Resolution adopted on July 25, 1916, by the Board of Estimate & Apportionment. The premises affected by this order located in a portion of the City designated by said resolution as a business district.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 20 ft. and a depth of 80 ft.; occupied for repair and manufacture of automobile tops; and

WHEREAS, the board deemed that the element of hardship justifies the variation.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, only so far as it permits the conduct of an auto top repairing business, *on condition* that there shall be no power-driven machinery of any nature or description operated on the premises, and that there shall be no gasoline storage equipment maintained on the premises.

THE RESOLUTION:

(1232-24-BZ)

WHEREAS, Boris W. Dorfman, for Louis Bergstein, owner, filed, October 16, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 169-191 Linden street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Linden street and Central avenue are business districts and Grove street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered September 20, 1924, in acting on N. B. Application No. 7530-24, reads:

"Denied—Proposition contrary to the Zone Resolution, Art. II, Sec. 4. A public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 250

MINUTES

ft. and a depth of 100 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, a committee of inspection of the board visited the premises and reported adversely, which report was adopted unanimously and no facts were adduced from the testimony offered in support of hardship or practical difficulty, the report reads:

Cal. No. 1232-24-BZ.

Premises—169-191 Linden St., Brooklyn.

TO THE BOARD OF APPEALS:

On March 30, 1925, a Committee of the Board, consisting of Chairman Walsh, Chief Kenlon, Messrs. Holland, Dowd and Connell, visited this premises, the site of the proposed garage.

The appeal is brought under section 20, namely, hardship, and covers a plot of ground 250 ft. frontage on Linden Street with a depth of 100 feet.

There is no other prohibited or non-conforming use on this entire street front. Adjoining to the west, there is a four-car garage which, being in a business street, is permissible. The entire street, otherwise, is now occupied by frame dwellings. Grove Street, the next street to the north, is occupied by frame dwellings, other than a vacant plot immediately to the rear of this proposed garage, and, on the northerly side of Grove Street, a wagon factory, as mentioned in the moving papers in this appeal, does exist in a small frame dwelling, approximately 25 ft. front and two stories in height. It is a wagon repair works on the ground floor with living apartments above, and its existence in no wise supports consideration of a con-conforming invasion on this street, one block easterly therefrom.

The Committee reports that there is no other provision of exception in the Building Zone Resolution applicable to this case, and the basis alleged in the appeal, namely, hardship and practical difficulty, is absolutely unsupported because the remainder of Linden Street as well as Grove Street is developed by dwellings. The Committee therefore recommends denial of the application.

(Signed) WILLIAM E. WALSH,
JOHN KENLON,
JOHN DOWD,
JAMES P. HOLLAND,
HENRY L. CONNELL.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

THE RESOLUTION:

(21-25-BZ)

WHEREAS, Murray Klein, for Watkins Garage Realty Co., Inc., owner, filed, January 7, 1925, an application, under the building zone resolution, to permit the extension from

an unrestricted district into a business district of a proposed garage for the storage of more than five motor vehicles; premises 50-54 West 144th street and 69 West 143rd street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that the southerly side of West 144th street, 100 ft. east of Lenox avenue is unrestricted and the southeast corner of West 144th street and Lenox avenue is business; and

WHEREAS, the decision of the superintendent of buildings, rendered December 2, 1924, in acting on N. B. Application No. 637-24, reads:

"1. Proposed occupancy should comply with Art. II, Section 4, of the Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 75 ft. on West 144th street, 47 ft. 2 in. on West 143rd street, and a depth of 199 ft.; to be occupied as a garage for the storage of more than five motor vehicles, a portion 15 ft. wide at the westerly side of the 144th street front is in the business district; and

WHEREAS, under the provisions of section 7, subdivision C, the board is empowered to act.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the structure be limited in height to a one-story building above grade; that there be no cellar other than a boiler room not exceeding in area 20 ft. by 20 ft., including the stairs therefrom, located at the extreme northwesterly corner of the 144th street front of the building; that the gable walls shall be unpierced throughout their entire height and length; that any gasoline storage equipment installed shall not exceed a single tank of not more than 550 gallons capacity, located at the extreme northerly end of the structure at the 144th street wall front; that the roof shall be of flat design and construction, fire-retarded throughout in accordance with the rules of the board of standards and appeals; that the street elevation be finished in face brick with architectural terra cotta or stone trimmings; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the work completed within eighteen months from the date of this action.

WHEREAS, this application was denied by the board at its meeting November 25, 1924, and reopened by vote of the board; and

MINUTES

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 200 ft. and a depth of 150 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the applicant has filed the duly acknowledged consents of the owners of 81 per cent of the property frontage deemed by the board to be affected.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be restricted to a one-story structure above grade, with no cellar other than the boiler room; that the roof shall be of flat design and construction; that the elevations of the street fronts shall be finished in face brick with architectural terra cotta or stone trimmings; that the rear wall shall be unpierced throughout its entire height and length; that there shall be no vehicular entrances on the 19th street or the 20th street front; that any openings, other than an emergency exit not exceeding 3 ft. 8 in. in width, on the 19th street and 20th street fronts, shall be restricted to windows the sills of which shall be not less than 5 ft. 6 in. above grade; that there shall be no roof signs erected or maintained on the structure; that any gasoline storage equipment installed shall be located at the street wall of the Jackson avenue front; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1204-24-BZ.

APPLICANT—Charles B. Meyers, for Stuyvesant Fulton Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1716-1728 Fulton street, Brooklyn.

APPEARANCES—

For Applicant: Charles B. Meyers and Samuel Hellinger.

For Opposition: Charles H. Levy and George Schneider.

ACTION OF BOARD—Application denied.

THE VOTE—

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon.....	7
Absent	0

THE RESOLUTION:

(1204-24-BZ)

WHEREAS, Charles B. Meyers, for Stuyvesant Fulton Co., Inc., owner, filed, October 7, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1716-1728 Fulton street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fulton street and Herkimer street are business districts and Stuyvesant avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered September 5, 1924, in acting on Application No. 17405-24, reads:

"1. Erection of a public garage for more than five motor vehicles in a business district is contrary to Zone Res. Art. II, Sec. 4-a. Therefore denied."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 175

ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there is a city park located opposite the premises and applicant failed to substantiate the basis of his application under section 7, subdivision E, and section 21.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1066-24-BZ.

APPLICANT—Croker National Fire Prevention Engineering Co., for George F. and Howard J. Riley, owners.

SUBJECT—Application (re: order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises.

PREMISES AFFECTED—595 East 35th street, Brooklyn.

APPEARANCES—

For Applicant: Herman E. Horwood.

For Opposition: Arthur Windels.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland and Connell.....	5
Absent: Mr. Gunnison and Fire Chief Kenlon	2

THE RESOLUTION:

(1066-24-BZ)

WHEREAS, Croker National Fire Prevention Engineering Co., for George F. and Howard J. Riley, owners, filed, August 25, 1924, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 595 East 35th street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 35th street and Newkirk avenue are residence districts; and

WHEREAS, the order of the fire commissioner, dated May 8, 1924, reads:

"Order No. 88717-LC:

"Discontinue the maintenance of Garage on the premises in which is kept motor vehicles that are used for business purposes.

"This order is issued for the reason that the maintenance of the use or occupancy referred to above, is a violation of the Building Zone Resolution, adopted July 25, 1916, by the Board of Estimate and Apportionment. The premises affected by this order located in a portion of the city designated by said resolution as a residence district."

and

WHEREAS, the existing building is non-fireproof, one story in height, 40 ft. by 20 ft. in area; occupied as a garage for five cars; it is proposed to rent four spaces to persons not residing on premises; and

WHEREAS, the applicant failed to substantiate the basis of his application, under section 7, subdivision G, not having filed the necessary consent.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

239-19-BZ.

APPLICANT—Nathan Permut, for Jose B. DeCastro and Lydia DeCastro.

SUBJECT—Application for reopening (re: decision of fire commissioner) to permit the maintenance

MINUTES

of a public garage in a residence district.
PREMISES AFFECTED—1171 New York avenue and
3301 Cortelyou road, Brooklyn.

APPEARANCES—

For Applicant: Nathan Permut.

For Opposition: None.

ACTION OF BOARD—Application granted on condi-
tion; permit extended two (2) years, expiring
March 24, 1927.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Ken-
nedy, Dowd, Gunnison, Connell and
Holland 6

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(239-19-BZ)

WHEREAS, John Kenny, owner, filed, April 22, 1919, with
the board of appeals, an application, under the building
zone resolution, to permit the maintenance of a public
garage in a residence district; premises 1171 New York
avenue and 3301 Cortelyou road, Brooklyn; and

WHEREAS, a public hearing was held on this application
by the board of appeals, at its special meeting, May 20,
1919, after due notice by publication in the Bulletin of the
Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-
ing zone resolution show that New York avenue is in a
residence district and that Canarsie lane (Cortelyou road)
is in a residence district; and

WHEREAS, the decision of the fire commissioner, dated
April 7, 1919, reads:

"Maintenance of your garage is a violation of Sec-
tion 3 of Article 2 of the Building Zone Resolution
* * * inasmuch as motor vehicles stored are for sale,
for rent, or for hire or are subject to charges for
storage.";

and

WHEREAS, the building is non-fireproof (cement block),
one story, 9 ft. 6 in. in height, with a frontage of 47 ft.
6 in. and a depth of 20 ft.; and

WHEREAS, it appears that Canarsie lane, east of 34th
street, is undeveloped, and there is a printing shop lo-
cated in the rear of 486 East 34th street and also a private
garage located on adjoining property on New York ave-
nue; and

WHEREAS, this application was granted by the board at
its meeting, May 20, 1919, for a temporary period of two
years and applicant's grantee requested an extension of
time until May, 1925, and now requests a further extension
of time until May, 1927, and the request was granted by
vote of the board.

Resolved, that the board of appeals does hereby *make*
a variation in the application of the use district regula-
tions of the building zone resolution, and that the applica-
tion be and it hereby is *granted* for a period of two years, from
the expiration of the present permit, i. e., until May 24, 1927,
on condition that not more than five automobiles of the
pleasure car type are stored on the premises at any time.

896-19-BZ.

APPLICANT—Michael J. Martin & Son, Inc.

SUBJECT—Application for modification of resolution (re:
decision of superintendent of buildings) to per-
mit, partly in a business district and partly in
an unrestricted district, the erection of a garage
for the storage of more than five (5) motor vehi-
cles.

PREMISES AFFECTED—Southeast corner of 230th
street and Exterior street, The Bronx.

APPEARANCES—

For Applicant: George V. Martin.

For Opposition: None.

ACTION OF BOARD—Application for modification of
resolution granted.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Ken-
nedy, Dowd, Gunnison, Connell and Hol-
land 6

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(896-19-BZ)

WHEREAS, Moore & Landsiedel, architects, on behalf of
Michael J. Martin & Son, Inc., owner, filed, November 28,
1919, with the board of appeals, an application, under the
building zone resolution, to permit partly in a business
district and partly in an unrestricted district the erection
of a garage for storage of more than five motor vehicles;
premises southeast corner West 230th street and Exterior
street, The Bronx; and

WHEREAS, a public hearing was held on this application
by the board of appeals, at its special meeting, December 18,
1919, after due notice by publication in the Bulletin of the
Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-
ing zone resolution show that Exterior street is located
in an unrestricted district and that 230th street and Broad-
way are both located in business districts; and

WHEREAS, the decision of the superintendent of buildings,
dated November 13, 1919, reads:

"Erection of proposed garage for storage of more
than five motor vehicles in unrestricted district ex-
tending into a business district is contrary to provi-
sions of Building Zone Resolution.";

and

WHEREAS, the proposed building was to be of fireproof
construction, five stories in height, with a frontage of 133.62
ft. and a depth of 106.98 ft., the building extending ap-
proximately 6 ft. 6 in. into the business district to the east;
to be occupied as a garage for more than five motor vehi-
cles, the maps accompanying the building zone resolution
specifically placing the corner on which the proposed garage
is to be located in an unrestricted district; and

WHEREAS, this application was granted by the board at its
meeting, December 18, 1919, on certain conditions, and ap-
plicant requested a modification of the time limit imposed,
and on April 8, 1924, applicant requested a modification of
the resolution to permit the reduction of the height of the
building from five to two stories and the change of type
of construction from fireproof to fireproof except the roof,
which is to be of non-fireproof construction; and

WHEREAS, this application was granted by the board at
its meeting, April 8, 1924, and applicant requested a cor-
rection of the resolution as to the openings in walls in the
unrestricted district.

Resolved, that the board of appeals does hereby *make*
a variation in the application of the use district regula-
tions of the building zone resolution, and that the appli-
cation be and it hereby is *granted on condition* that the build-
ing be restricted to two stories in height above grade, con-
structed fireproof, other than the roof of the building, which
shall be fire-retarded in accordance with the rules of the
board of standards and appeals, and the building to be
equipped with 2½ in. standpipe; that the rear and side
walls in the business district be unpierced throughout their
entire height and length; that the front of the building
shall be of face brick, with architectural terra cotta or
stone trimmings; and that all permits necessary for the
prosecution of the work shall be obtained within ninety days
and the building completed within six months from the
date of this action.

AREAS FIXED.

(205-25-BZ)

The chairman presented and read a communication
from Victor Tria, requesting the board to fix the area
deemed affected and within which to obtain consents for
the erection and maintenance of a garage; premises 737-
743 Pennsylvania avenue, Brooklyn.

The following area was approved by the board:

MINUTES

Both sides of Pennsylvania avenue from a point 100 feet north of Linden (Lorraine) avenue to a point 400 feet north of proposed garage; also the properties at rear and for a distance of 50 feet on either side of the side lot lines of the premises in question.

(206-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 94-96 Avenue U, Brooklyn.

The following area was approved by the board:

Both sides of Avenue U from West 8th street to West 11th street, the east side of West 10th street from Avenue U to a point 150 feet south of Avenue U; also the west side of West 9th street from Avenue U to a point 150 feet south of Avenue U.

(27-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage;

premises, east side of Jerome avenue, 200 feet north of Clifford place, The Bronx.

The following area was approved by the board:

Both sides of Jerome avenue from West 176th street to a point 400 feet south of proposed garage; both sides of East 175th street from Jerome avenue to Townsend avenue; also the west side of Townsend avenue from East 175th street to a point 240 feet south of East 175th street.

(732-24-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 162-172 McDougal street, Brooklyn.

The following area was approved by the Board:

Both sides of McDougal street from Saratoga avenue to a point 200 feet east of Hopkinson avenue; both sides of Hopkinson avenue from Sumpter street to a point 100 feet south of Hull street; also the north side of Hull street from Hopkinson avenue to a point 150 feet west of Hopkinson avenue.

Adjourned, 3:25 p. m.

THE RESOLUTION:

(1306-24-A)

WHEREAS, Yankauer & Davidson, for Marino L. Pomares, and others, owners, filed, November 6, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 276, 278, 280, 286, 288, 294, 296, 300, 318, 320, 324, 328, 332, 336, 338 and 340 Chauncey street, Astoria, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated October 21, 1924, reads:

“Order No. 90870-LC:

“With reference to your application dated February 26th, 1924, for a permit to maintain a garage at the above location, I regret to inform you that I am without power to grant such a permit for the reason that Section 154, Chap. 10, Code of Ordinances, provides that a permit shall not be issued for a garage in a building in which more than two (2) stories above the garage are used as living apartments.

“You are therefore ordered to remove all automobiles from the premises and discontinue the maintenance of a garage on the premises.”;

and

WHEREAS, the premises consist of a number of buildings located on Chauncey street, each non-fireproof, three stories and basement in height, 18 ft. by 34 ft. in area. OCCUPIED: Basement, boiler room and garage; upper stories as a dwelling; and

WHEREAS, appellant submitted a certificate of occupancy permitting the use of the premises as a garage and dwelling, issued by the bureau of buildings; and contends that to comply with the orders of the fire commissioner would be a hardship.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that fire escape balconies not less than 3 ft. by 3 ft. in area, embracing at least one window on each story, connected by vertical ladders, with drop ladder in guides from lowest balcony to yard, shall be provided on the rear of each building; that the opening between garage and boiler room shall be built up solidly with approved masonry and that not more than one automobile shall be main-

tained on each premises; and that no gasoline storage equipment shall be maintained on premises.

THE RESOLUTION:

(1187-21-A)

WHEREAS, George Kuss, Finndell Amusement & Con. Co., owner, filed, October 13, 1921, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 640-44 Lenox avenue, 59-71 West 142nd street and 52-58 West 143rd street, Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered October 3, 1921, in acting on N. B. Application No. 1018-21, reads:

“1. A regulation standpipe equipment must be installed together with a 3500 gal. gravity tank filling pump, capable of filling tank at the rate of 65 gals. per minute and a 5000 gal. suction tank, fire pump and etc., all to be shown in detail on plans and section.”;

and

WHEREAS, the proposed building is to be of fireproof construction, “L” shape in area, facing on three streets, the portion facing on Lenox avenue being 74 ft. 11 in. by 85 ft. in area, two stories in height, the main portion of the building extending from 142nd street to 143rd street being 100 ft. by 200 ft. in area; the entire building to be OCCUPIED as theatre and stores and assembly hall; theatre seating 2,200 persons and assembly hall 100 persons; and

WHEREAS, appellant states that the theatre portion of the building is only 17,500 sq. ft. in area, facing on two streets, and there will be no stage or scenery.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a regulation standpipe with 4 in. street connections to city water mains in both streets be provided; that there shall be no dressing room, stage, scenery or stage setting maintained or used on premises; that there shall be no roof garden; and that the public assembly occupancy of premises shall be restricted to one floor, the auditorium.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell and Fire Chief Kenlon	5
Negative	0
Absent: Messrs. Kennedy and Holland.....	2

THE RESOLUTION:

(1167-24-A)

WHEREAS, E. H. Gibson, for Gulf Refining Co., owner, filed, September 25, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises east side of Zerega avenue, between Chatterton and Blackrock avenue, The Bronx; and

WHEREAS, the decision of the fire commissioner, Alt. App. No. 1460-24, dated September 5, 1924, reads:

"1. Fire Department considers location of plant unsatisfactory.

"2. Filling tanks are required to be buried 2 ft. below the grade level.";

and

WHEREAS, the premises consist of a plot of ground, approximately 200 ft. by 200 ft., upon which is located the storage plant of the Gulf Refining Co.; and

WHEREAS, appellant contends that the location of the plant offers no fire hazard; that the tanks comply with the regulations relating to explosives and hazardous trades regarding filling tanks; and that the method used is common to all oil storage plants; and

WHEREAS, a committee of the board visited the premises and reported:

Cal. No. 1167-24-A.

Premises—Zerega Ave., Chatterton Ave., Blackrock Ave., The Bronx.

TO THE BOARD OF APPEALS:

On March 30, 1925, a committee of the board, composed of Chairman Walsh, Fire Chief Kenlon, Messrs. Holland and Connell, made a personal inspection and survey of the plot embraced in this appeal and the environs.

The appeal affects a proposed oil storage plant at the above location, from Zerega Avenue to Westchester Creek, and is from an objection of the fire department—"location of tank unsatisfactory."

This is rather an isolated district at the extreme easterly end of Chatterton Avenue on Westchester Creek.

The block to the south is occupied by coal pockets; the block to the north by a machinery plant of the Bronx Gas and Electric Company; the property directly opposite on Zerega Avenue is occupied as a stone yard. The tributary of Westchester Creek bordering this property is very shallow and narrow with an extensive meadow stretching from this immediate tributary to the east between the two tributaries of Westchester Creek. There is no development or improvement adjoining or abutting that in any way could be affected by this proposed oil storage yard and plant, and the Committee recommends granting of the appeal on condition that the proposed finished drawings of enclosures and safeguards be approved by this Board.

(Signed) WILLIAM E. WALSH,
JOHN KENLON,
JAMES P. HOLLAND,
HENRY L. CONNELL.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the working drawings of the layout shall be submitted to this board for approval before submission to the fire department; and that this plant shall be completed in compliance with the code of ordinances in all other respects.

BUILDING ZONE CASES.

1038-24-BZ.

APPLICANT—Charles D. Cords, for Quartin-Handler Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five motor vehicles.

PREMISES AFFECTED—750-760 New York avenue, Brooklyn.

APPEARANCES—

For Applicant: Charles D. Cords.

For Opposition: None.

ACTION OF BOARD—Application laid over to April 28, 1925, at 10 a. m., on request of applicant.

1400-23-BZ.

APPLICANT—William F. Doyle, for Turin Garage & Supply Co., Inc., owner.

MINUTES

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the alteration and extension of an existing garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—55 West 93rd street, Manhattan.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: W. N. O'Neill.

ACTION OF BOARD—Application laid over to April 28, 1925, at 10 a. m., on request of applicant.

1450-24-BZ.

APPLICANT—George L. Donnellan, on behalf of Louise Hart, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the maintenance of an undertaking establishment in the first story of a dwelling.

PREMISES AFFECTED—67 West 130th street, Manhattan.

APPEARANCES—

For Applicant: George L. Donnellan.

For Opposition: J. C. Hawkins, B. F. Mills, Conrad T. Gittens, A. Grometsstein and others.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland and Fire Chief Kenlon 5

Negative: Mr. Connell 1

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1450-24-BZ)

WHEREAS, George L. Donnellan, for Louise Hart, owner, filed, December 9, 1924, an application, under the building zone resolution, to permit in a residence district the maintenance of an undertaking establishment in the 1st story of a dwelling; premises 67 West 130th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 130th street and West 131st street are residence districts and Lenox avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 19, 1924, reads:

"With reference to application for Certificate of Occupancy for above premises, we beg to state that Certificate cannot be issued as application calls for—as business is prohibited in a residence district.";

and

WHEREAS, the existing building is of non-fireproof construction, five stories in height, with a frontage of 20 ft. and a depth of 53 ft.; occupied as a dwelling; it is proposed to occupy the 1st story as an undertaking establishment, the remainder of premises to be occupied as a dwelling; and

WHEREAS, the inconspicuous use, with no outward evidence of business display, and being but one house removed from the business use district influence of Lenox avenue, the board deemed a temporary permit a reasonable adjustment.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that no sign, other than a glass sign not exceeding 8 in. by 14 in. placed on the inside of the ground floor window, shall be displayed on the premises, and there shall be no advertising of any nature or description displayed; that there shall be no structural alteration or change; that the use shall be limited to a period of two years and confined to the front room on the 1st floor for a licensed embalmer's office and mortuary chapel, the remainder of the structure to be restricted to residential or dwelling use.

76-25-BZ.

APPLICANT—Samuel Rosenblum, for The Barre Real-
ties, Inc., owner.

SUBJECT—Application (re: decision of superintendent
of buildings) to permit, partly in a business dis-
trict and partly in a residence district, the erec-
tion and maintenance of a garage for the storage
of more than five (5) motor vehicles.

PREMISES AFFECTED—968-972 Fulton street,
Brooklyn.

APPEARANCES—

For Applicant: Samuel Rosenblum.

For Opposition: Otto M. Gabler, W. D. Teese,
Jacob Wohlberg, Margaret Whittet, Carl F.
Recht and Louis Rosenweig.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0
Negative: Chairman Walsh, Messrs. Dowd,
Gunnison, Holland and Connell..... 5
Absent: Mr. Kennedy and Fire Chief Ken-
lon 2

THE RESOLUTION:

(76-25-BZ)

WHEREAS, Samuel Rosenblum, for The Barre Real-
ties, Inc., owner, filed, January 19, 1925, an application, under
the building zone resolution, to permit partly in a business
district and partly in a residence district the alteration
and conversion of an existing business building (theatre)
into a garage for the storage of more than five motor ve-
hicles; premises 968-972 Fulton street, Brooklyn; and

WHEREAS, a public hearing was held on this application
by the board of appeals, at its special meeting, March 31,
1925, after due notice by publication in the Bulletin of the
Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-
ing zone resolution show that Fulton street is a business
district and Lefferts place is a residence district; and

WHEREAS, the decision of the superintendent of buildings,
rendered December 29, 1924, in acting on App. No. 25217-
24, reads:

"Proposition contrary to the zone resolution, Art. 2,
Sec. 4A 15, and Sec. 3. The erection of a public
garage for more than five motor vehicles in a busi-
ness district and extending into a residential district.";

and

WHEREAS, the proposed building is to be of fireproof con-
struction, two stories and cellar in height, with a frontage
of 91 ft. and a depth of 100 ft. and 142 ft., irregular in
area; to be occupied as a garage for the storage of more
than five motor vehicles; and

WHEREAS, the board deemed that the existing theatre
building is adaptable by reasonable alteration for any of
the permissible uses in a business district with substantial
return rather than the demolition of this structure for the
proposed prohibited use.

Resolved, that the decision of the superintendent of build-
ings be and it hereby is affirmed, and the application be
and it hereby is denied.

1485-24-BZ.

APPLICANT—John J. Dunnigan, for Joseph Diamond
Construction Co., owner.

SUBJECT—Application (re: decision of superintendent
of buildings) to permit in a residence district the
erection and maintenance of a building to be
used for business purposes on the first story.

PREMISES AFFECTED—1997 Bryant avenue, The
Bronx.

APPEARANCES—

For Applicant: Walter A. Dunnigan and John
J. Dunnigan.

For Opposition: Henry Nordheim, Dr. Mirkin,
Benjamin Katz and others.

ACTION OF BOARD—Application granted on con-
dition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Holland and Connell... 5
Negative 0
Absent: Mr. Kennedy and Fire Chief Ken-
lon 2

THE RESOLUTION:

(1485-24-BZ)

WHEREAS, John J. Dunnigan, for Joseph Diamond Cons.
Co., owner, filed, December 18, 1924, an application, under
the building zone resolution, to permit in a residence dis-
trict the erection and maintenance of a building to be
used for business purposes on the 1st story; premises 1997
Bryant avenue, The Bronx; and

WHEREAS, a public hearing was held on this application
by the board of appeals, at its special meeting, March 31,
1925, after due notice by publication in the Bulletin of the
Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-
ing zone resolution show that Bryant avenue and East 178th
street are residence districts; and

WHEREAS, the decision of the superintendent of buildings,
rendered December 13, 1924, in acting on N. B. App. No.
1500-24, reads:

"Proposed occupancy of portion of building for busi-
ness purposes in residence district is contrary to pro-
visions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof
construction, six stories in height, with a frontage of 31
ft. 3 in. and a depth of 100 ft. 5 in.; to be occupied, stores
in the 1st story and apartments above; and

WHEREAS, the board deemed that, owing to the charac-
ter of the existing business uses established in this street,
there would be hardship in preventing applicant from mak-
ing a similar use of a portion of his property.

Resolved, that the board of appeals does hereby make
a variation in the application of the use district regulations
of the building zone resolution, and that the application
be and it hereby is granted on condition that the return
for business use from the corner formed by the intersec-
tion of Bryant avenue shall not exceed a depth of 54
ft. and that the business use shall be restricted to the 1st
story, for the conduct of retail merchandise business, other
than foodstuffs, and that the remainder of structure shall
be limited and restricted to conforming uses, as stipulated
in the building zone resolution, and that the requirements
of the building zone resolution shall be complied with in all
other respects;

Resolved, further, all permits necessary for the prosecu-
tion of the work shall be obtained within nine (9) months
and the building completed within eighteen (18) months
from the date of this action.

1530-24-BZ.

APPLICANT—Edward P. Doyle, for Boris Nalven and
Max Natevsky, owners.

SUBJECT—Application (re: decision of superintendent
of buildings) to permit in a business district the
erection and maintenance of a garage for the
storage of more than five (5) motor vehicles.

PREMISES AFFECTED—225-235 Pennsylvania ave-
nue, Brooklyn.

under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 225-235 Pennsylvania avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Pennsylvania avenue and Pitkin avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 22, 1924, in acting on N. B. App. No. 24237-24, reads:

"Proposition is contrary to the Zone Resolution, Art.

II, Sec. 4, a public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 100 ft. on Pennsylvania avenue, 100 ft. on Pitkin avenue; and

WHEREAS, there was general opposition to the granting of this application on the part of neighboring property owners and the board deemed that any further invasion of this street by prohibited uses is unwarranted in deference to the dwelling occupancies throughout this entire street, the non-conforming use on which the application is based being located on the corner at the extreme end of this block.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

44-25-BZ.

APPLICANT—New York Telephone Company, owner.
SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the alteration and extension in height and area of a telephone exchange building.

PREMISES AFFECTED—4101-4111 14th avenue, Brooklyn.

APPEARANCES—

For Applicant: N. B. Egleston.

lon 2

THE RESOLUTION:

(44-25-BZ)

WHEREAS, New York Telephone Company, owner, filed, January 12, 1925, an application, under the building zone resolution, to permit the alteration and extension of an existing telephone exchange building, located partly in a business and partly in a residence district; premises 4101-4111 Fourteenth avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that Fourteenth avenue is a business use district, 41st and 42nd streets are residence use districts, and the premises is located in a one-times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 25, 1924, in acting on Alt. App. No. 23155-24, reads:

"Proposition contrary to the Zone Resolution, Art.

II, Sec. 3. Extending a telephone exchange in a residence district."; and

WHEREAS, the existing building, permission to erect which was granted under Cal. No. 665-17-A, is fireproof, two stories in height, 100 ft. 2 in. by 142 ft. 6 in. in area; it is proposed to build an additional story on the existing building and also a three-story fireproof extension 46 ft. 9 5/8 in. long on 41st street and 44 ft. 4 in. deep on the southerly end of the building, and use the entire structure as a central telephone exchange; and

WHEREAS, under the provisions of section 7, subdivision D, the board is empowered to act.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be finished, as to material, design and architecture, in accordance with the existing structure; that the building shall otherwise comply with the requirements of the building zone resolution, and that the use and occupancy shall be restricted exclusively to the conduct and use as a telephone exchange;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

THE RESOLUTION:

(1098-24-BZ)

WHEREAS, Walter S. Beaver, for William and Lena Schwartzberg, owner, filed, September 4, 1924, an application, under the building zone resolution, to permit in a business district the change of occupancy of a building, from a garage for the storage of five motor vehicles, to a garage for the storage of more than five motor vehicles; premises 458 Leonard street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Leonard street is a business district, Manhattan avenue, east side, is an unrestricted district, Manhattan avenue, west side, is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered August 7, 1924, in acting on Alt. App. No. 15884-24, reads:

"This application denied as it is contrary to Article 2, Sect. 4, Sub. Div. 15, of the Zone Law. Garage for more than five cars prohibited in a business district.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 103.5

MINUTES

ft. and a depth of 124 ft., irregular in area; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant is unable to obtain the required consent of the property frontage deemed by the board to be affected due to the presence of city owned property in the area, and the board deemed that there would be hardship in preventing applicant from making proposed use of his property owing to the character of the neighborhood, and the spirit and intent of the requirements of section 7, subdivision G, being otherwise substantially complied with.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the structure shall be restricted in size and area to that of the existing building; that there shall be no entrance or exit on Leonard street; and that there shall be no gasoline storage equipment installed or maintained on the premises.

THE RESOLUTION:

(165-25-BZ)

WHEREAS, William F. Doyle, for Morris White Holding Corp., owner, filed, February 9, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a residence building, part of 1st story to be used for store purposes; premises 297-303 Lexington avenue and 133-139 East 37th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Lexington avenue and East 37th street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 13, 1925, in acting on N. B. Application No. 12-1925, reads:

"1. Inasmuch as the premises are located in a residence district, the proposed use or occupancy of any part of the building for stores is prohibited by the Building Zone Resolution, Section 3, Article 2.;"

and

WHEREAS, the proposed building is to be of fireproof construction, 15 stories in height, with a frontage of 98 ft. 7½ in. and a depth of 140 ft.; to be occupied as an apartment hotel; it is proposed to use part of the 1st story for stores and business uses; and

WHEREAS, no facts were adduced at the hearing in support of the application under section 21.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

Adjourned, 7:40 p. m.

EDWARD V. BARTON, Acting Secretary.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, April 7, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided

throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and

PUBLIC HEARING

sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. *When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.*

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, *except when tanks of unlimited capacities are supported on structures altogether independent of buildings.*

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting structures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the side-

PUBLIC HEARING

walk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($\frac{1}{2}$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a

PUBLIC HEARING

direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half ($\frac{1}{2}$) inch heads—

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 10 foot bays;
- 11 feet in 9 foot bays;
- 12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

- 20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

- 25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each 62 $\frac{1}{2}$ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing. Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed six-

teen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

PUBLIC HEARING

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of

joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

PUBLIC HEARING

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, 48.
- (b) For Conran* one (1) inch heads, 12.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other

parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the building are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

PUBLIC HEARING

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

(a) For standard one-half ($\frac{1}{2}$) inch heads400
(b) For Conran* one (1) inch heads100
(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64
Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

(a) For Standard one-half ($\frac{1}{2}$) inch heads800
(b) For Conran* one (1) inch heads200
(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128
(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower

PUBLIC HEARING

than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

Rule 33. Approval of Sprinkler System [Tests]. Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. Non-fireproof Business Buildings. Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. Dangerous or Hazardous Buildings. Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. Factories and other Buildings. Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. Theatre Buildings. Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. Firework Storage. Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. Nitro-Cellulose Products. Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. Inflammable Motion-Picture Films. Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. Existing Installations and Approvals. Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. Communicating Openings. When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

PUBLIC HEARING

Rule 43. Maintenance Inspections. Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises

a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. Open Sprinklers. When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

RULES

RULES FOR THE CONSTRUCTION AND INSTALLATION OF GAS SHUT-OFF VALVES, ADOPTED BY THE BOARD OF STANDARDS AND APPEALS, JANUARY 11, 1924.

RULES FOR GAS SHUT-OFF VALVES TO COMPLY WITH ORDINANCE AMENDING ARTICLE OF CHAPTER 12 OF THE CODE OF ORDINANCES, RELATING TO CONTROL OF GAS IN CERTAIN BUILDINGS IN CASE OF FIRE.

1. Gas shut-off valves and accessory appliances shall include valves approved as such by the Bureau of Standards, Washington, D. C., by the Underwriters' Laboratories, Inc., Chicago, Ill., by the Associated Factory Mutual Laboratories of Boston, or other recognized standard laboratory; and all valves shall be approved and meet the test prescribed by the Board of Standards and Appeals.

2. Gas shut-off valves shall be installed only by corporations, firm or individuals who shall furnish evidence of their qualifications under the Code of Ordinances, to the Fire Commissioner or the Tenement House Commissioner in their respective jurisdictions.

3. Such corporations, firms, or individuals shall maintain a Service Station which shall be in direct communication with the Fire Department by telephone or telegraph. Location of service station and means of communication shall be on file with the Fire Commissioner, in order that the Fire Department may insure immediate service when the gas is turned off by the members of the Fire Department or from any other cause.

The Fire Department shall have exclusive use of gas shut-off valves to be operated in the event of fire or other emergencies.

4. All gas shut-off valves to be installed must be made of the best quality of standard materials.

Protection of Valves:

5. The gas shut-off control shall be protected by a suitable, approved metal box, placed on the exterior of the building, which shall be connected, through a rigid metal conduit, by a cable, with the valve body placed on the gas intake where the gas pipe enters the building, and as near as practicable to the inside face of the wall, before reaching the meters. The lock for securing box on outside wall of building shall be operative only by a Fire Department inner box key by members of the Fire Department.

6. All valve bodies shall be made of brass or bronze. If a spring is used to actuate a valve in conjunction with the fusible link, it shall be of the best quality phosphor bronze.

7. The internal mechanism which acts to shut off the gas shall be securely connected with the external mechanism by a direct mechanical connection, made gas tight, where it passes through the valve body, by a stuffing box filled with soft, well-lubricated packing, in accordance with recognized standard practice.

Installation:

8. The valve shall be so installed as to be conspicuously displayed and readily inspected and reset by authorized persons.

Valves shall be located so that condensation will not accumulate in the valves; and shall be installed so that gas will flow through the valve in direction indicated on it.

9. Valves shall be secured in piping by threaded connections or companion flanges. Combustible packing or sheet lead shall not be used between flanges.

10. The gas main at both ends of the valve must be rigid and secure to withstand the pull from the control handle. Additional non-combustible brackets or hangers must be provided, if necessary, to secure and maintain rigid installation.

11. The valve shall be enclosed in a substantial, perforated metal case, conspicuously exposed, painted red, protected by standard lock acceptable to the Fire Prevention Bureau, and shall indicate the name, telephone number and address of installer, to insure prompt service to property owner.

12. Casing of the valve on gas intake shall be kept locked to protect valve from interference and make it accessible only to authorized persons. Perforations, to allow circulation of air around fusible link, shall be provided and so arranged as to prevent tampering with valve when casing is locked.

Control Box:

13. The control handle for the manual closing of the valve shall be in a locked metal control box having a cast iron cover conspicuously labeled with raised letters, painted red.

14. On the outside of the cover or the inside of the control box, in raised or stamped letters, or on a securely fastened metal plate, shall be displayed concise operating directions, together with the name, initials or registered trademark of the manufacturer.

15. The control box must be placed as nearly vertically above the point where the gas main enters the premises as is practicable, when this does not involve excessive length of cable and extra turns, and at a height above the sidewalk or grade, of not less than two (2) feet and not more than five (5) feet. Without special permission, the control box shall not be placed or mounted on basement window frames, or directly above basement windows or other openings, nor shall it be located behind doors or other obstructions which would prevent the Fire Department from having easy access to it.

16. Control boxes must be securely and permanently fastened. Whenever possible, they shall be fastened to a non-combustible wall, pillar or column. They shall be secured by not less than two 3/16 inch bolts or the equivalent. Unless the building is so constructed that the control box must unavoidably be secured to a wooden part, the use of wood screws is not permitted for supporting countersunk control boxes; lag bolts shall be used. When the walls are of masonry or concrete, through bolts, expansion bolts or toggle bolts shall be used. All fastenings must be arranged so that they cannot be loosened except from inside opening of the control box.

RULES

17. Control boxes may be set or recessed into the wall to a depth not greater than the depth of the box so that cover is flush with the face of the wall. Control boxes may be mounted directly on the surface of the wall.

18. The control box shall be located on the outside of the building wall, facing the street, whenever possible. When the control box is installed on an alley face of a building, or in a similar place where the control box is subject to injury from passing vehicles, etc., the control box must be thoroughly protected. This may be done by having the control box recessed, marked by waterproof red paint ring and waterproof white paint ring on the wall, or, when such protection is not available, protected by heavy iron channels or angles secured to the wall by through bolts, expansion bolts, or toggle bolts.

Control Handles:

19. Control handles shall be of standard construction, arranged to fit the control boxes so that they may be locked without difficulty, and cable connections shall be securely made in an approved manner, according to the design of the handle.

Cable:

20. The connection between the valve and control handle shall be as direct as practicable, and shall consist of a single piece of stranded phosphor bronze cable not less than 3/32 inch in diameter. No splices in the cable shall be permitted.

21. It is essential that cable connections to valve and handle be securely made according to the design in each case. The cable may be slightly annealed for making ends, and when cutting the cable, it should be taped and cut through the tape, or a small amount of solder applied where it is to be cut, so as to prevent frayed end.

Conduit:

22. The control cable for the shut-off valve shall be run in galvanized wrought iron or steel pipe or other standard approved conduit not less than 1/2 inch in pipe size. The pipe or conduit line must be water-tight and continuous from the casing enclosing the operating mechanism of the valve to the control box on outside of building. The cable shall not be exposed at any point in its length.

23. All ends of pipe or conduit, not only at valve and control box terminals, but in the run of the piping, shall be carefully reamed so as to remove burrs and fins caused by cutting-off tools, which would interfere with the movement of the cable in the run, or cut, or wear the cable. Unions should not be employed in making joints.

24. Pipe or conduit must be rigidly and permanently secured in position. Pipe straps and hangers of standard forms may be employed for this purpose. In every case supports must be provided at points sufficiently numerous to prevent sagging. Pipe straps (if used) must be of metal of sufficient thickness to insure a permanent fastening and must be thoroughly coated to prevent corrosion.

Bends and Offsets:

25. Bends of small radius or through much of an arc, introduce possibilities of binding of the cable or of an appreciable friction resisting the pull of the cable; therefore, approved roller fittings shall be required wherever the pipe or conduit is bent to a radius of less than 4 inches, or wherever the bend is through an arc exceeding 15 degrees, except as outlined for offsets.

26. When connections to control boxes are made from below, it is frequently necessary to make an offset in the conduit to avoid a water table or other part of a building wall. One offset of not more than 2 inches will be permitted for each installation at such points. The bends in the pipe forming the offsets must be carefully made to avoid cracking the enamel or galvanized coating, or the flattening or cracking of the pipe or conduit. The amount of offset shall not exceed 2 inches and the length of the offset shall not be less than five times the amount of the offset. For example, a 2-inch offset must be at least 10 inches long. Single offsets only shall be permitted. Double offsets are not acceptable.

Roller Fittings:

27. For turns in the conduit greater than those mentioned above, approved roller fittings shall be used. No roller fittings turning more than 90 degrees from a straight line shall be used.

Automatic Control:

28. The fusible link which controls actuation of the valve in the event of direct heat, shall melt at not less than 225 degrees F. and shall be so arranged as to in no way interfere with the manual means of shutting off the gas which is controlled by the handle in box placed on the face of the building. Only approved fusible links shall be used. Automatic control shall in no way depend upon electric current for its operation.

Production Tests at Factory:

29. Valves must be tight under the following tests:

(a) Valves shall be mounted in the position in which they are designed to operate. Normal city gas pressure or equivalent air pressure shall be applied to the inlet side and the valve shall completely shut off the gas or air when closed as in normal operation.

(b) To determine whether the valve shuts off tightly under this test, a tube shall be connected with the outlet side of the valve and the outer end of the tube shall be immersed in water to a depth not exceeding one (1) inch, indicating leakage by bubbles rising through the water from the end of this tube.

(c) Valves, after this test, shall be capable of shutting off ten (10) pounds air pressure applied to the inlet side; to determine whether the valve is tight, the test procedure shall be as indicated in the preceding test.

(d) Valve bodies shall be strong enough to withstand, without leakage, one hundred (100) pounds pressure applied from either end with the other end closed. In this test the entire valve, including the stuffing box, shall be completely immersed in water, so that leakage will be indicated by bubbles rising through the water.

(e) The fusible link connections of each valve shall be carefully tested to avoid prematurely operating the gas shut-off valve through vibration or concussion. The construction of the fusible link connections shall be so designed and made that the automatic feature will not operate through vibration or concussion.

(f) The entire process of manufacture of the valves shall be subject to inspection and review and each valve shall be tested at the factory by a recognized laboratory or agency with facilities for making the test prescribed by the Board of Standards and Appeals, and each valve must bear satisfactory evidence that it has been so tested.

(g) Manufacturers of gas shut-off valves must submit the name or names of said laboratories or agencies to the Fire Commissioner or the Tenement House Commissioner, in their respective jurisdictions, with satisfactory evidence of their ability and facilities to properly carry out said tests.

(h) Valves and operating mechanisms shall be so designed and constructed that they will withstand the deteriorating effects or corrosion, as evidenced by operating tests.

Installation and Inspection Tests:

30. a. After shut-off valve is installed, it shall be set and operated to determine that proper closure is secured by operating the control handle. Particular care should be taken to observe that when operating the control handle, no part of the cable or of its attachment to the valve interferes in any way with the positive closure of the valve.

b. After the above test, all gas outlets in the building must be inspected to insure their being closed before the valve shall be set and the gas turned on. Valve and connections shall also be tested for leaks by applying a solution of soap and water to all parts, including connections to gas piping.

RULES

After the valve has been used to shut off gas, it shall reset only by authorized corporations, firms or individuals, or by members of the Fire Department.

Operating and installation corporations, firms or individuals responsible for the installation of the gas shut-off valves shall permanently maintain properly equipped service stations in each of the boroughs where they install valves.

Gas shut-off valves and installations shall be inspected at least once a year by members of the Fire Department or the Tenement House Department, in their respective jurisdictions, or by corporations, firms or individuals authorized to install gas shut-off valves, as determined by the Fire Commissioner or the Tenement House Commissioner, in their respective jurisdictions.

NOTICE OF REMOVAL

NOTICE IS HEREBY GIVEN THAT THE
BOARD OF STANDARDS AND APPEALS IS
NOW LOCATED ON THE TENTH FLOOR OF
THE MUNICIPAL BUILDING, ROOMS 1001
TO 1015—NORTH END OF BUILDING.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Cal-
endar.
All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013, on Tuesday, April 14,
1925, at 2 o'clock. At this call each case is set for hearing
on a definite day.

The next subsequent Call of the Calendar will be on
Tuesday, April 21, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Connell, Holland and

Fire Chief Kenlon

Negative

Absent: Mr. Kennedy

THE RESOLUTION:

(100-25-A)

WHEREAS, Cornell Utilities Co., Inc., for C. F. Williams, owner, filed, January 23, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises west side of Spuyten Duyvil parkway,

MINUTES

14 ft. north of West 231st street, Borough of Bronx;

WHEREAS, the decision of the fire commissioner, rendered December 30, 1924, in acting on Alteration Application No. 2658-24, reads:

"3. Note on tank drawing, tank will be tested in presence of a Fire Department representative and afterwards coated with a suitable rust resisting material.

"7. Note on plan: 'Piping will be tested in presence of a Fire Department Representative.'

"11. Burners must be of a type approved by the Board of Standards and Appeals.";

WHEREAS, the building is non-fireproof, 2½ stories in height, 33 ft. by 37 ft. in area; OCCUPIED as a dwelling;

WHEREAS, a fuel oil burning system has been installed consisting of a 700-gallon fuel oil storage tank buried outside the premises, a 55-gallon auxiliary tank, a Nokol burner and the necessary valves and piping to complete the installation; and

WHEREAS, appellant requests that a sworn affidavit to the effect that the tank has undergone a shop test be accepted; and contends that the installation conforms with the fuel oil rules in all other respects, excepting in that the burner is not an approved burner.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 3, on condition that certificate of factory test shall be filed with the fire commissioner; as to Item 7, on condition that all piping used throughout the installation shall be of standard wrought iron; as to Item 9, on condition that the door of the fire-box of boiler shall be equipped with self-closing device; and that the installation shall comply with the fuel oil rules in all other respects.

101-25-A.

APPELLANT—Cornell Utilities Co., Inc., for Mrs. M. Kelly, owner.

SUBJECT—Appeal from decision of fire commissioner. PREMISES AFFECTED—727 Avenue L, Brooklyn.

APPEARANCES—

For Appellant: William Porter.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(101-25-A)

WHEREAS, Cornell Utilities Co., Inc., for Mrs. M. Kelly, owner, filed, January 23, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 727 Avenue L, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered December 29, 1924, in acting on Alteration Application No. 2641-24, reads:

"3. Note on tank drawing, tank will be tested in presence of a Fire Department Representative and afterwards coated with a suitable rust resisting material.

"6. Note on plan: 'Piping will be tested in presence of a Fire Department Representative.'

"9. Burners must be of a type approved by the Board of Standards and Appeals.";

WHEREAS, the building is frame, two stories in height, 30 ft. by 34 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 275-gallon fuel oil storage tank buried outside the premises, a 55-gallon auxiliary tank, a Nokol burner and the necessary valves and piping to complete the installation; and

WHEREAS, appellant requests that a sworn affidavit to the effect that the tank has undergone a shop test be accepted; and contends that the installation conforms with the fuel oil rules in all other respects, excepting in that the burner is not an approved burner.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 3, on condition that certificate of factory test shall be filed with the fire commissioner; as to Item 6, on condition that all piping used throughout the installation shall be of standard wrought iron; as to Item 9, on condition that the door of fire-box of boiler shall be equipped with self-closing device; and that the installation shall comply with the fuel oil rules in all other respects.

102-25-A.

APPELLANT—Cornell Utilities Co., Inc., for J. Louis, owner.

SUBJECT—Appeal from decision of fire commissioner. PREMISES AFFECTED—2597 Grand Concourse, The Bronx.

APPEARANCES—

For Appellant: William Porter.

THE RESOLUTION:

(105-25-A)

WHEREAS, Cornell Utilities Co., Inc., for Paul T. Wise, owner, filed, January 23, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 128 Maple avenue, Flushing, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, rendered December 29, 1924, reads:

"3. Note on tank drawing, tank will be tested in presence of Fire Department Representative and afterwards coated with a suitable rust resisting material

"6. Note on plan: 'Piping will be tested in presence of a Fire Department Representative.'

"10. Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the building is frame, 2½ stories in height, 48 ft. by 45 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 700-gallon fuel oil storage tank buried outside the premises, a 55-gallon auxiliary tank, a Nokol burner and the necessary valves and piping to complete the installation; and

WHEREAS, appellant requests that a sworn affidavit to the effect that the tank has undergone a shop test be accepted; and contends that the installation conforms with the fuel oil rules in all other respects, excepting in that the burner is not an approved burner.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 3, on condition that certificate of factory test shall be filed with the fire commissioner; as to Item 6, on condition that all piping used throughout the installation shall be of standard wrought iron; as to Item 10, on condition that the door of the fire-box of boiler shall be equipped with self-closing device; and that the installation shall comply with the fuel oil rules in all other respects.

106-25-A.

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(117-25-A)

WHEREAS, F. P. Keniston, for L. Schreiber & Co., lessee, filed, January 27, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 119 Fourth avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 14, 1925, reads:

"With reference to your application dated December 18, 1924, for a permit to store nitro-cellulose products in the building 113, 119 Fourth Avenue, Manhattan, I regret to inform you that I am without power to grant such a permit for the following principal reason:

"The sprinkler system of the building has no gravity tank. (Sprinkler Rule No. 37.)

"You are, therefore, hereby, ordered to:

"1. Remove all nitro-cellulose products from the premises.";

and

WHEREAS, the building is non-fireproof, eight stories in height, 103 ft. by 126 ft. in area; OCCUPIED as a tenant factory, 310 persons above the 1st story; the 1st story (the one in question) being occupied for shaping and spotting celluloid dice, 40 persons on this story, 7 being engaged on this process; and

WHEREAS, appellant contends that the sprinkler system is supplied by four 7,500-gallon pressure tanks; that the building is equipped, also, with a regulation standpipe system and with an interior fire alarm signal system; and proposes to store 20 pounds of nitro-cellulose stock in a sprinklered fireproof enclosure on the 1st story of the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that not more than 20 pounds of cellulose stock shall be kept on the premises, stored in an enclosure of fireproof partitions, located on 1st story; that said room or enclosure shall be equipped with an approved sprinkler head; and *granted* so long as building is equipped and maintained with an approved sprinkler system.

APPLICANT—Joseph McGinnis for Charles Manierre, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—421-429 West 209th street, Manhattan.

APPEARANCES—

For Applicant: William T. White.

For Opposition: H. Rabanowitz and Silas Alacchi.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE RESOLUTION:

(1432-24-BZ)

WHEREAS, Joseph McGinnis, for Charles Manierre, owner, filed, December 4, 1924, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 421-29 West 209th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Tenth avenue is a business district and West 209th street and West 210th street are unrestricted districts; and

WHEREAS, the decision of the superintendent of buildings, rendered April 3, 1925, in acting on amendment to N. B. Application No. 634-24, reads:

"1. Location of proposed garage is contrary to the provisions of section 3 of the Building Zone Resolution.

"4. Rear yard should be provided as per sect. 12 & 16, Building Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 100 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the proposed site is contiguous to a garage authorized by a former action of this board; the street frontage is already invaded by other public garages; the applicant has supported his appeal by filing substantial consents of owners of property immediately affected, and it would be a hardship to deprive him of a non-conforming use similar to other such uses in the street.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations

of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be limited to a one-story building above grade and the building covering the entire area of the plot; that the rear and gable walls shall be unpierced throughout their entire height and length; that any skylights installed shall be glazed with plain glass, equipped with wire guards above and below, and shall not be located within 25 ft. of the rear wall; that the front elevation shall be finished in face brick, with architectural terra cotta or stone trimmings; that any gasoline storage equipment installed shall be located at the extreme front of the building at the street wall; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1180-24-BZ.

APPLICANT—Edward P. Doyle, for Two Hundred and Fifty-seven Madison Avenue, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence 1½ times height district the erection and maintenance of a business building and to erect the street walls to a height exceeding the limit required by the zone resolution.

PREMISES AFFECTED—257-261 Madison avenue, Manhattan.

APPEARANCES—

For Applicant: Edward P. Doyle and Robert B. Knowles.

For Opposition: Edmund L. Baylies, John P. Fox, Masten & Nichols, Kenneth M. Spence and C. H. Robinson.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Absent: Mr. Kennedy	1

THE RESOLUTION:

(1180-24-BZ)

WHEREAS, Edward P. Doyle, for 257 Madison Ave., Inc., owner, filed, September 30, 1924, an application, under the building zone resolution, to permit in a residence use 1½ times height district the erection and maintenance of a business building and also to permit the erection of the street walls to a height exceeding the limit set by the zone resolution; premises 257-259-261 Madison avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that Madison avenue from 38th to 39th streets and East 38th and East 39th streets are residence districts and Madison avenue, north of 39th street, is a business use district; and that the premises are located in a two-times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered September 17, 1924, in acting on N. B. Plan No. 497-24, reads:

"Item 2. Proposed occupancy is unlawful in a residence district. Art. II, Building Zone Resolution.

"Item 3. Proposed height is excessive. Art. III, Building Zone Resolution."

and

WHEREAS, the proposed building is to be of fireproof construction, 22 stories in height, with a frontage of 78½ ft. and a depth of 100 ft.; to be occupied as a business building, the street wall to be erected to a height of 150 ft., thereby exceeding the height regulations; and

WHEREAS, there was vigorous objection on the part of property owners having residences within the immediate vicinity, and the applicant having but recently acquired

MINUTES

title to the proposed site, with a presumption of knowledge that it was in a residential zone; and there were no facts adduced from the testimony offered supporting any element of hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

56-25-BZ.

APPLICANT—John J. Dunnigan, for Jacob O. Pederson, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension from an unrestricted district into a residence district of a proposed garage for the storage of more than five (5) motor vehicles, and also its location within 200 feet of a hospital.

PREMISES AFFECTED—1895 Inwood avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Charles V. Scanlan and Dr. E. W. Sherman.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Messrs. Gunnison and Holland 2

Negative: Chairman Walsh, Messrs. Dowd, Connell and Fire Chief Kenlon..... 4

Absent: Mr. Kennedy 1

THE RESOLUTION:

(56-25-BZ)

WHEREAS, John J. Dunnigan, for Jacob O. Pederson, owner, filed, January 13, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a residence district, of a proposed garage for the storage of more than five motor vehicles, and also its location within 200 ft. of a hospital; premises 1895 Inwood avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Inwood avenue is an unrestricted district and Featherbed lane is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 27, 1924, in acting on N. B. Application No. 3070-24, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in unrestricted district extending into a residence district is contrary to the provisions of the Building Zone Resolution.

"2. Proposed garage appears to be located within 200 ft. of a hospital.";

and

WHEREAS, the proposed building is to be of non-fire-proof construction, one story and basement in height on Inwood avenue and one story with apartments above grade on Featherbed lane, with a frontage of 125 ft. on Inwood avenue and 124.27 ft. on Featherbed lane; the building to be occupied as a garage with dwelling above the grade level on Featherbed lane, the plot being located within 200 ft. of a hospital; and

WHEREAS, there was vigorous opposition on the part of property owners residing in the immediate vicinity, and a protest from the hospital authorities, and the applicant failed to substantiate his basis of appeal under section 21, namely, hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

59-25-BZ.

APPLICANT—Lawrence J. Frank, for Solomon Goldstein, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection of additional buildings and the extension of the use of an existing stone or monumental works.

PREMISES AFFECTED—Northwest corner of Sutter avenue and Pitkin avenue, Woodhaven, Borough of Queens.

APPEARANCES—

For Applicant: Lawrence J. Frank.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon

Negative

Absent: Mr. Kennedy

THE RESOLUTION:

(59-25-BZ)

WHEREAS, Lawrence Frank, for Solomon Goldstein, owner, filed, January 15, 1925, an application, under the building zone resolution, to permit in a business district the erection of additional buildings and the extension of the use of an existing stone or monumental works; premises northwest corner of Sutter avenue and Pitkin avenue, Woodhaven, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Sutter avenue and Pitkin avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, January 6, 1925, in acting on N. B. Application No. 17029-24, reads:

"Erection of building or structure for stone or monumental works is prohibited in business district.";

and

WHEREAS, the premises consist of a plot of ground having a frontage of 264 ft. on Pitkin avenue and an average depth of approximately 100 ft., upon which is located various sheds, cranes and stone cutting machinery incidental to a monument works; it is proposed to extend the use to the intersection of Pitkin and Sutter avenues, a distance of about 329 ft., and to erect additional buildings for travelling cranes, office and air compressor, rooms, etc. and

WHEREAS, the applicant has filed 82 per cent of consent of affected property frontage, and the board deemed it hardship to refuse permission to extend the existing use under restrictive conditions.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that any motive power employed on the plant be restricted to electrical operation; that a fence wall be erected not less than 10 ft. in height, of face brick or reinforced concrete, paneled; that operation and use of the plant shall be restricted to the extension of existing stone monument works; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the alteration completed within one year from the date of this action.

74-25-BZ.

APPLICANT—Anthony D. Rasso, for Dominick Rasso, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a business building.

and Fire Chief Kenlon 3

Negative: Chairman Walsh, Messrs. Dowd
and Gunnison 3

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1504-24-BZ)

WHEREAS, Wm. F. Doyle, for Smith-Scutt Co., Inc., owner, filed, December 22, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises west side of Bergen avenue, 317.47 ft. north of Jamaica avenue, Jamaica, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7,

1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Bergen avenue, Clinton avenue and Jamaica avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 15, 1924, reads:

"Garage for more than five cars prohibited in a business district by the Zone Resolution.";

and
WHEREAS, the proposed garage, situated at the rear of the lot (whereon there exists a public stable which will be demolished) is non-fireproof, one and two stories in height; approximately 139 ft. by 234 ft. in area at 1st story and 139 ft. by 26 ft. in area at 2nd story, with entrances from Bergen avenue and also Jamaica avenue; the 2nd story occupied as offices and the remainder of the premises as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant has failed to prove to the satisfaction of the board that the property is unsuitable for any other than garage purposes, and there being opposition to the granting of the application.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

1290-24-BZ.

APPLICANT—Louis Nathanson, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of five attached residence buildings to be used for store purposes on first story.

PREMISES AFFECTED—1921-27 and 1931 Neck road, Brooklyn.

APPEARANCES—

For Applicant: Thomas O'Rourke Gallagher.

For Opposition: C. R. Lesten, J. Carr, C. W. Richman and J. S. Royke.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Dowd,
Gunnison, Holland, Connell and Fire
Chief Kenlon 6

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1290-24-BZ)

WHEREAS, Louis Nathanson, owner, filed, October 30, 1924, an application, under the building zone resolution, to permit in a residence district extending from a business district the erection and maintenance of five (5) attached residence buildings, to be used for store purposes on the 1st story; premises 1921-27 and 1931 Neck road, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 19th street is a business district, Ocean avenue is a residence district and Neck road is a business district to a point 100 ft. east of East 19th street and residence to east therefrom; and

WHEREAS, the decisions of the superintendent of buildings, rendered October 9, 1924, in acting on App. No. 20207-24, for premises 1921-27 Neck road, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3. Stores in a residence district.";

and App. No. 20208-24, for premises 1931 Neck road, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3. Stores in a residence district.";

and
WHEREAS, approximately 6 ft. 6 in. of the westerly side of the lot is in the business district, the remainder being in

MINUTES

the residence district. It is proposed to erect thereon five attached non-fireproof dwellings, one building (on Ocean avenue corner) being three stories in height and 26 ft. by 87 ft. in area, the remainder being two stories in height and 21 ft. 7 in. by 87 ft. in area; it is proposed to occupy them all by stores on the 1st story and dwellings above; and

WHEREAS, the proposed site is 6 ft. in a business district and 100 ft. in a residence district, extension of business use, under section 7-c, is unwarranted, and the applicant having purchased the property within a year has not substantiated an appeal on the ground of hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1518-24-BZ.

APPLICANT—Henry J. Nurick, for Michael Bonuzo, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the alteration and conversion of a private garage to be used for store purposes.

PREMISES AFFECTED—1-11 East 32nd street, Brooklyn.

APPEARANCES—

For Applicant: Henry J. Nurick.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1518-24-BZ)

WHEREAS, Henry J. Nurick, for Michael Bonuzo, owner, filed, December 26, 1924, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the alteration and also the conversion of occupancy of a building used as a private garage to a store use; premises 1-11 East 32nd street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Church avenue is a business district and East 32nd street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered October 31, 1924, in acting on Alt. App. No. 21251-24, reads:

"1. Application contrary to Art. II, Sect. 3. Store portion extends into residence district."; and

WHEREAS, the premises consist of a plot of ground 22 ft. 6 in. by 103 ft. in area, on which is located a three-story non-fireproof dwelling with store on the 1st story, having an extension to the south containing two stores and a further extension to the south thereof consisting of a one-story non-fireproof private garage 20 ft. by 21 ft. 10 in. in area. It is proposed to alter this private garage into two one-story stores; and

WHEREAS, the board is of the opinion the conversion is unwarranted under the circumstances.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1428-24-BZ.

APPLICANT—John De Hart, for Zivie Bender, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the

erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1223-1229 Intervale avenue, The Bronx.

APPEARANCES—

For Applicant: John De Hart.

For Opposition: Charles Tilgner.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon...

Negative: Chairman Walsh

Absent: Mr. Kennedy

THE RESOLUTION:

(1428-24-BZ)

WHEREAS, John De Hart, for Zivie Bender, owner, filed, December 3, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1223-1229 Intervale avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 7, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Intervale avenue, Chisholm street and Home street are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 2, 1924, in acting on N. B. App. No. 3046-24, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution."; and

WHEREAS, the proposed building is to be of non-fireproof construction, one story and basement in height, with a frontage of 100 ft. and a depth of 184 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant substantiated his basis of appeal under section 7-e and also filed 44 per cent of consents in support of his application.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be limited to a one-story structure above grade; that a rear yard shall be maintained above the 1st story level; that the rear and gable walls shall be unpierced throughout their entire height and length; that there shall be no skylight within 25 ft. of the rear or gable walls other than a flat skylight at level of 1st story rear; that any gasoline storage equipment shall be maintained at the southerly end of the building at the street front; that the roof shall be of flat design and construction; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

CASES DISMISSED.

Appeals from Administrative Orders.

The chairman called attention to the following case where notices of intention to appeal were offered for filing but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(1226-24-A)

Filed October 14, 1924—Premises 9 East 40th street, Manhattan. Order of the fire commissioner. Appellants, Draper, Satterlee & Pope. Dismissed for lack of prosecution.

MINUTES

(1245-24-A)

Filed October 20, 1924—Premises 229-231 West 42nd street, Manhattan. Order of the fire commissioner. Appellant, Selwyn Realty Corporation. Dismissed for lack of prosecution.

(1330-24-A)

Filed November 8, 1924—Premises 2720-24 Broadway, Manhattan. Order of the fire commissioner. Appellant, Realty Sureties, Inc. Dismissed for lack of prosecution.

(1341-24-A)

Filed November 12, 1924—Premises 482 Fulton street, Brooklyn. Order of the fire commissioner. Appellant, Herbert Studio. Dismissed for lack of prosecution.

(1353-24-A)

Filed November 17, 1924—Premises 600-604 Degraw street, Brooklyn. Order of the fire commissioner. Appellant, Richard Godfrey. Dismissed for lack of prosecution.

(1406-24-A)

Filed November 26, 1924—Premises 52 Lafayette street, Manhattan. Order of the fire commissioner. Appellant, Equipment & Supply Co., Inc. Dismissed for lack of prosecution.

THE VOTE TO DISMISS FOR LACK OF PROSECUTION—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

WHEREAS, the foregoing appellants have filed with the board of appeals various appeals from orders affecting the premises stated; and

WHEREAS, appellants have failed to complete their papers, though duly notified to do so.

Resolved, that the foregoing appeals be, and they hereby are, dismissed for lack of prosecution.

Under the Building Zone Resolution.

The chairman called attention to the following cases, where notices of intention to appeal were offered for filing, but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(817-24-BZ)

Filed June 18, 1924—Premises 2354 Valentine avenue, The Bronx. Order of the fire commissioner. Applicant, Martha Dreyfuss. Dismissed for lack of prosecution.

(1127-24-BZ)

Filed September 15, 1924—Premises 2706-36 86th street, Brooklyn. Decision of superintendent of

buildings. Applicant, Arthur J. Stern. Dismissed for lack of prosecution.

(1144-24-BZ)

Filed September 18, 1924—Premises 560-562 11th street, Brooklyn. Decision of superintendent of buildings. Applicant, Max Hirsch. Dismissed for lack of prosecution.

(1189-24-BZ)

Filed October 2, 1924—Premises 7235 Amboy road, Tottenville, S. I., Richmond. Decision of superintendent of buildings. Applicant, Max Mendelowitz. Dismissed for lack of prosecution.

(1289-24-BZ)

Filed October 30, 1924—Premises northwest corner of Vulcan street and Olympia street, South Beach, S. I., Richmond. Decision of superintendent of buildings. Applicant, Salvator Caradonna. Dismissed for lack of prosecution.

THE VOTE TO DISMISS FOR LACK OF PROSECUTION—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

WHEREAS, the foregoing applicants have filed with the board of appeals various applications under the building zone resolution, affecting the premises in question; and

WHEREAS, the applicants have failed to complete their papers, though duly notified to do so.

Resolved, that the foregoing applications be and they hereby are dismissed for lack of prosecution.

AREA FIXED.

(5-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises northwest corner Cortelyou road and Gravesend avenue, Brooklyn.

The following area was approved by the board:

Both sides of Gravesend avenue from a point 200 feet south of Cortelyou road to a point 400 feet north of proposed garage. Both sides of Cortelyou road from West street to a point 400 feet east of proposed garage; also both sides of West street from a point 100 feet south of Cortelyou road to a point 100 feet north of Cortelyou road.

Adjourned 2:15 p. m.

EDWARD V. BARTON, *Acting Secretary*.

THE RESOLUTION:

(1354-24-S)

WHEREAS, Edward P. Doyle, for Horace G. Ely & Co., owner, filed November 17, 1924, a petition with the board of standards and appeals for variation from the requirements of the labor law as cited in an order and decision of the superintendent of buildings affecting premises 19-21 East 55th street, Manhattan; and

WHEREAS, the order of the superintendent of buildings, No. 4803-1924, dated November 6, 1924, reads:

"In that of occupying first floor, nine persons employed at manufacturing; six at manufacturing of lamp shades, and three at dressmaking; contrary to Certificate of Occupancy No. 7084, which permits only five persons at manufacturing in the entire building.

"You are hereby directed to discontinue the said use of the above described building until a certificate of occupancy has been issued by the superintendent of buildings for such use."

and

WHEREAS, the decision of the superintendent of buildings dated November 26, 1924, reads:

"An inspection of the above premises in connection with application for Certificate of Occupancy was made and it was found that before certificate may be issued it will be necessary to provide a secondary means of egress from all floors and same must meet the requirements of the Labor Law, paragraph 271. Exit signs and lights must also be provided and floor loads must be posted."

and

WHEREAS, the building is non-fireproof, five stories and basement in height, 33 ft. by 80 ft. in area at first story and 33 ft. by 60 ft. in area above, separated into two sections by a fore and aft brick wall with openings therein on each story. OCCUPIED as follows: Basement, stores; first story, salesrooms and manufacture of lamp shades, six persons, and also dressmaking, three persons; upper stories, dwellings. EXITS: An interior wooden stairway extending from first story to roof; enclosed in wood lath, and plaster partitions with wooden doors at openings; a fire escape balcony on the rear at the second story only, of the building. ROOFS of adjoining buildings to east and west are 10 ft. lower; and

WHEREAS, petitioner proposes to provide a 4 ft. wide fire escape balcony at the rear of the first story connected with a 45 degree stairway to the roof of extension of the first story, also a 45 degree stairway from the basement roof to the adjoining west yard; a casement fireproof door is to be provided from each workroom; all window openings on course of fire escape are to be made fireproof, self-closing; flame plates covering entire length and width of fire escape balcony rear of fire story will be provided; egress from this roof (No. 19-21) to adjoining roofs can be had by means of ladders;

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted on condition that a fire escape shall be provided on the rear of the building, embracing not less than one window from each apartment occupancy above first story with 45 degrees stairs and landing from the roof of first story extension to the roof of the basement story at first story level, with 45 degree stairs to yard of adjoining premises to the west, with egress therefrom through yard of premises No. 17, by means of a plain glass door, and that the use and occupancy shall be limited to the conditions certified in the certificate of occupancy issued by the superintendent of buildings.

47-25-S.

PETITIONER—Croker National Fire Prevention Engineering Co., for Samuel Berman, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—65 Fulton street, Manhattan.

APPEARANCES—

For Petitioner: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Connell and Holland,

Superintendents Brady, Reville, Kleinert,

Moore and McDermott 10

Negative 0

Absent: Mr. Kennedy, Fire Chief Kenlon

and Deputy Fire Commissioner Hannon 3

THE RESOLUTION:

(47-25-S)

WHEREAS, Croker National Fire Prevention Engineering Company, for Samuel Berman, owner, filed, January 12, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 65 Fulton street, Manhattan; and

WHEREAS, the order of the fire commissioner dated October 7, 1924, reads:

"Order. No. 65824-LD:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals * * *.

"NOTE: Among the defects noted are the following:

"No fireproof passageway from termination to street.

"2. Provide an unobstructed passageway around hoistway leading from the foot of the stairway to the street, said passageway to have a width of not less than the width of the stairway, as per Section 271 of the Labor Law."

and

WHEREAS, the building is non-fireproof, four stories in height, 39 ft. by 89 ft. in area at the first story and 39 ft. by 53 ft. in area above; OCCUPIED as tenant factory, nine persons above the first story; the second story being vacant at present; EXITS: An interior wooden stairway extending from the first story to the roof; enclosed in wooden partitions with wooden doors at the openings; a fire escape on the rear of the building, extending from the main roof to the roof of the one story extension, with egress from the termination of fire escape by means of extension roof to ladder leading to extension roof of premises to the rear and therefrom by means of fire escape on said building to the rear; ROOFS of adjoining buildings are at the same level; and

WHEREAS, petitioner contends that the existing means of egress from the termination of the fire escape are adequate and proposes in re. Item No. 2 to install tell-tale chains at the hoistway;

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects egress from the termination of the rear fire escape, on condition that the requirements of the labor law shall be complied with in all other respects, and that the rear fire escape shall be carried to the roof of extension, with egress therefrom over extension of property in the rear and to roof of extension adjoining on both sides; granted, as to Item No. 2, on condition that tell-tale chains shall be provided on the hoistway in accordance with the specifications laid down in book of rules of the board of stand-

MINUTES

ards and appeals, and that the occupancy shall not exceed twenty-five (25) persons above the first story.

118-25-S.

PETITIONER—William F. Doyle, for Penn Operating Company, owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—225-241 West 34th street and 234-238 West 35th street, Manhattan.

APPEARANCES—

For Petitioner: William F. Doyle.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell and Holland, Fire Chief Kenlon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 11

Negative 0

Absent: Mr. Kennedy and Deputy Fire Commissioner Hannon 2

THE RESOLUTION:

(118-25-S)

WHEREAS, William F. Doyle, for Penn Operating Company, owner, filed, January 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 225-41 West 34th street and 234-38 West 35th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings rendered January 16, 1925, in acting on N. B. Application No. 224-24, reads:

"8. All windows in the building should be fireproof. Sec. 264 of Labor Law. Fireproof windows must be stationary or self-closing to conform with the requirements of Rule 503 of the Industrial Code.";

and

WHEREAS, the building is fireproof, 22 stories in height, 154 ft. by 197 ft. (irregular) in area; OCCUPIED for lofts and offices—variable number of employees. EXITS: Two interior fireproof stairways, both extending from the first story to the roof, both enclosed in fireproof partitions with fireproof doors at openings; ROOFS of adjoining buildings on West 34th street front—to west, six stories lower; to east, nine stories lower; on West 35th street front—to west, eighteen stories lower; to east, four and seven stories lower; and

WHEREAS, petitioner proposes to provide self-closing devices only on such windows which form an exposure and which are within 30 ft. of any opening in another building or within 50 ft. of a neighboring roof.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted on condition that all windows within 50 feet vertically, or 30 feet horizontally, of any other roof or exposure, shall be equipped in accordance with the labor law requirements.

1501-24-S.

PETITIONER—Adolf Rosenbaum, for Springler-Van Beuren Estates, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—12-16 East 14th street, Manhattan.

APPEARANCES—

For Petitioner: Adolf Rosenbaum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Gunnison, Connell and Holland, Fire

Chief Kenlon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 10

Negative 0

Absent: Messrs. Kennedy, Dowd and Deputy

Fire Commissioner Hannon 3

THE RESOLUTION:

(1501-24-S)

WHEREAS, Adolf Rosenbaum, for Springler-Van Beuren Estates, owner, filed, December 22, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 12-16 East 14th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 15, 1924, reads:

"1. Remove the substandard fire escape on the south side of the building or reconstruct same as per section 274 of the Labor Law and Rule 3 amended by the Board of Standards and Appeals, May 9, 1924.

"Among the defects noted are the following:

"Windows on course not fireproof, self-closing.

"No egress from termination to street.";

and

WHEREAS, the building is non-fireproof, five stories in height, having a frontage of 40 ft. on West 13th street and 75 ft. on West 14th street and a depth of 206 feet; OCCUPIED as a tenant factory—95 persons above the first story; EQUIPPED with a fire alarm signal system. EXITS: Three interior wooden stairways, two extending from first story to roof and one extending from the second to top story; all stairways enclosed in fireproof partitions with fire doors at openings; a 60 degree fire escape with fireproof windows along the course thereof, on the 13th street front of the building, extending from the top story to second story balcony with drop ladder in guides to street; a fire escape (the one in question) in the court with balconies on each story connected by 60 degree stairs to second story balcony, which balcony extends along the south wall of the premises and leads to a 60 degree stairs to an intermediate balcony—thence by means of a drop ladder to open yard leading to 13th street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the non-fireproof windows along the course of the fire escape are protected with iron shutters; that the fire escape balconies being four feet wide, egress along same is not obstructed by said shutters, and further contends that the open yard wherein the fire escape terminates is used for a driveway from 13th street; having at the street front a pair of large wooden gates which are open all day and can be opened at any time from the yard side.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted on condition that the small fire escape on the rear of the easterly section of the building shall be removed above the second story, and that the remainder of the fire escape on the rear of the premises shall be maintained structurally safe and that sufficient and adequate exits shall otherwise be maintained throughout the premises; granted only so long as the abutting properties remain in one ownership and the conditions as to occupancy and use of the premises remain otherwise unchanged.

135-25-S.

PETITIONER—James P. Whiskeman, for Estate of Byam K. Stevens, owner (U. S. Trust Co. of N. Y., trustee).

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—3 Maiden lane, Manhattan.

APPEARANCES—

For Petitioner: James P. Whiskeman.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

MINUTES

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Connell and Holland,
Fire Chief Kenlon, Superintendents
Brady, Reville, Kleinert, Moore and
McDermott 11
Negative 0
Absent: Mr. Kennedy and Deputy Fire Com-
missioner Hannon 2

THE RESOLUTION:

(135-25-S)

WHEREAS, James P. Whiskeman, for Estate of Byam K. Stevens, owner, filed, January 31, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 3 Maiden lane, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated December 3, 1924, read:

"Order No. 69155-LF:

"1. Install an adequate interior electric fire alarm system in accordance with the rules of the Board of Standards and Appeals and the enclosed approved layout."

"Order No. 69156-LF:

"An inspection of the premises 3 Maiden Lane, Borough of Manhattan, shows that a fire drill should be established and maintained therein according to the requirements of Sect. 279 of the Labor Law. The Labor Law specifically charges the Fire Commissioner with the duty of enforcing the provisions of the law, as to fire drills.";

and

WHEREAS, the building is fireproof, eight stories and pent house in height, 50 ft. 3 in. by 26 ft. 9 in. in area; OCCUPIED mainly as offices and salesrooms, 78 persons above the 1st story, 8 persons being engaged in regulating watches. EXITS: An interior fireproof stairway extending from the 1st story to the roof, enclosed in fireproof partitions with fire doors at the openings; a fire escape on the front of the building extending from roof to 2nd story balcony, with counterbalanced stair to street; windows along the course of the fire escape are fireproof; and

WHEREAS, petitioner proposes to reduce the number of persons (8) engaged in factory work to seven persons, and contends that this number, being less than 10 per cent of the occupancy, the building is not a factory building.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted on condition that not more than seven (7) persons shall be employed at factory work throughout the premises.

140-25-S.

PETITIONER—Samuel Rosenblum, for Kaufwein Realty Co., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—470-472 Seventh avenue, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Connell and Holland,
Fire Chief Kenlon, Superintendents Brady,
Reville, Kleinert, Moore and McDermott .. 11
Negative 0
Absent: Mr. Kennedy and Deputy Fire
Commissioner Hannon 2

THE RESOLUTION:

(140-25-S)

WHEREAS, Samuel Rosenblum, for Kaufwein Realty Co., owner, filed, January 31, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 470-72 Seventh avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 3, 1924, reads:

"1. Remove all partitions not built of incombustible material as per Sections 263 and 270 of the Labor Law.";

and

WHEREAS, the building is fireproof, 12 stories in height (irregular in area), having a frontage of 34 ft. on West 36th street and 40 ft. 8 in. on Seventh avenue. OCCUPIED: Offices, salesrooms and manufacturing, approximately 350 persons above the 1st story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Three (3) interior fireproof stairways, extending from 1st story to roof; enclosed in fireproof partitions, with fire doors at openings; and

WHEREAS, petitioner contends that practically all of the partitions form part of the fixtures of the tenant; that they do not obstruct the means of egress and that they are generally dwarf partitions and of temporary nature.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted, only so far as it affects the partitions around show rooms, office and entrance hall to office and show rooms and partitions, on condition that the upper portion of said partitions shall be glazed with thin glass not less than 18 in. below the sprinkler line; that exit door not less than 36 in. wide shall be provided in said partition, leading from workroom and opening out to exit hall; that an exit sign with letters at least 8 in. in height shall be provided and a red light placed over such door, in addition to other means of exit; that on any floor occupied by more than one tenant, the subdividing partitions shall be arranged so as to allow independent egress to all required means of exit from each tenant; that the partition subdividing one tenant from another shall extend from the floor to ceiling; and where partition prevents the effective discharge of water from sprinkler heads, additional heads shall be provided to cover entire area; that all interior partitions, excepting show room, office and entrance hall partitions, shall be constructed of incombustible material as specified under subdivisions A to H of section 355 of the building code, or any approved fireproof partition; and that the occupancy and use shall remain substantially unchanged.

279-25-S.

PETITIONER—John F. Jason, for 587 Fifth Avenue, Inc., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—587 Fifth avenue, Manhattan.

APPEARANCES—

For Petitioner: John F. Jason.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Dowd, Gunnison, Connell and Holland,
Fire Chief Kenlon, Superintendents
Brady, Kleinert, Moore and McDermott 10
Negative 0
Absent: Mr. Kennedy, Deputy Fire Com-
missioner Hannon and Superintendent
Reville 3

THE RESOLUTION:

(279-25-S)

WHEREAS, John F. Jason, for 587 Fifth Avenue, Inc.,

MINUTES

owner, filed, March 12, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 587 Fifth avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 11, 1924, reads:

"Order No. 67730-LD:

"1. Provide an additional required means of exit on each floor of the building, remote from the existing stairway, preferably located at the southeast corner of the building in accordance with the requirements of Section 270 of the Labor Law.

"2. Provide approved self-closing fire doors at least 44 in. in width at openings leading to balcony of fire tower at north side of building on all stories, opening outwardly as per Section 266 of the Labor Law and Rule 502 of the Industrial Code.

"3. Provide approved self-closing fire doors at least 44 in. in width leading to fire tower at north side of building from balcony on all stories, opening inwardly from the balcony to the stairway, so as not to obstruct the stairway, as per Section 266 of the Labor Law and Rule 502 of the Industrial Code.";

and

WHEREAS, petitioner amended his petition to include the decision of the superintendent of buildings, dated March 23, 1925, rendered in acting on Alteration Application No. 565-25, reads:

"1. Proposed exterior stairway not a lawful means of exit from a new factory building. Sect. 270 of Labor Law.";

and

WHEREAS, the building is fireproof, ten stories in height, 30 ft. by 115 ft. in area on the 1st to 6th stories inclusive, and 37 ft. by 107 ft. in area above; OCCUPIED on the 1st story as store, on the 2nd, 3rd, 6th and 7th stories for manufacturing and on the remaining stories as offices, 139 persons above the 1st story; the 5th story being vacant at present. EXITS: An interior fireproof stairway extending from the 1st story to the roof, enclosed in fireproof partitions, with kalameined doors at openings; these doors being 42 in. in width, the doors leading to the fire tower opening outwardly; ROOFS of adjoining buildings are approximately 30 ft. lower; and

WHEREAS, petitioner proposes to install a standard fire escape on the rear of the premises, extending from the roof to the 2nd story balcony; thence by means of iron stairway to rear yard of premises No. 1 East 47th street, with exit from termination of fire escape by means of door to store leading to East 47th street, and contends that, due to structural conditions in the fire tower, that the doors leading thereto would block the stairs if hung to open inwardly and in view of the proposed additional exit afforded by the fire escape requests acceptance of the 42 in. wide doors on account of the hardship which would result if compelled to make them 44 in. wide.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition as to Item No. 1, Order No. 67730, and Objection to Application No. 565-25 of the superintendent of buildings, on condition that a standard exterior screened stairway, in accordance with section 268 of the labor law, shall be erected on the rear south end landing in the yard of No. 1 East 47th street, with egress therefrom to the street through glass panel door, on condition that the occupancy of the building shall not exceed the legal capacity of the interior fire tower; granted, as to Item No. 2, on condition that the present doors of not less than 42 in. in width shall be maintained, same to be self-closing and fireproof, opening out on the line of travel; denied, as to Item No. 3, only so far as it affects the swing of the door.

385-24-S.

PETITIONER—Micheline Nicosia, owner.

SUBJECT—Variation of labor law as cited in decision of health commissioner.

PREMISES AFFECTED—2268 Second avenue, Manhattan.

APPEARANCES—

For Petitioner: Nichelina Nicosia and Sarah Murphy.

ACTION OF BOARD—Petition granted.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell and Holland, Fire Chief Kenlon, Superintendents Brady, Kleinert and McDermott..... 9

Negative 0

Absent: Mr. Kennedy and Deputy Fire Commissioner Hannon, Superintendents Renville and Moore 4

THE RESOLUTION:

(385-24-S)

WHEREAS, Micheline Nicosia, owner, filed, March 13, 1924, a petition, with the board of standards and appeals, for a variation from the requirements of the labor law, as cited in a decision of the health commissioner, affecting premises 2268 Second avenue, Borough of Manhattan; and

WHEREAS, the decision of the health commissioner, dated October 23, 1923, reads:

"At a meeting of the Board of Health of the Department of Health of The City of New York, held October 23, 1923, your application for a Sanitary Certificate for a cellar bakery at 2268 2nd Ave. in the Borough of Manhattan was denied.";

and

WHEREAS, the building is non-fireproof, five stories in height, 26 ft. by 50 ft. in area. OCCUPIED: Cellar, bakery; 1st story, stores; upper stories, dwellings; the height of the bakery from floor to ceiling being 10 ft. 3 in.; the ceiling being at same level as the curb and the floor being 7 ft. 8 in. below the rear court level; the means of ventilation consisting of a window opening on the yard; and

WHEREAS, petitioner contends it would be a hardship to raise the ceiling of the bakery one foot above the curb level, and that it is her only means of livelihood.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted.

1441-24-S.

PETITIONER—Samuel Rosenblum, for 44 West 56th Street Corporation, owner.

SUBJECT—Application for reopening—variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—44 West 56th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition reopened and resolution modified.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell and Holland, Fire Chief Kenlon, Superintendents Brady, Kleinert, Moore and McDermott 10

Negative 0

Absent: Mr. Kennedy and Deputy Fire Commissioner Hannon and Superintendent Renville 3

THE RESOLUTION:

(1441-24-S)

WHEREAS, Samuel Rosenblum, for 44 West 56th Street Corp., owner, filed, December 5, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of

MINUTES

the fire commissioner, affecting premises 44 West 56th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 23, 1924, reads:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law * * *.

"Among the defects noted on this fire escape are the following:

"* * * no fireproof passageway leading to the street from the termination.";

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 90 ft. in area on the 1st, 2nd and 3rd stories and 25 ft. by 64 ft. in area above; OCCUPIED as a tenant factory, 85 persons above the 1st story. EXITS: An interior wooden stairway, extending from 1st story to roof, enclosed in fire resisting partitions with metal covered wooden doors at openings; a 45 degree fire escape on the rear of the building (with fireproof windows along the course thereof), extending from the main roof to the roof of the 3rd story extension, and a fire escape on the rear of the three-story extension extending from the roof thereof to the yard; with EGRESS from the termination of fire escape by means of a door in the fence to yard of premises to west; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the existing means of egress are adequate; and

WHEREAS, this petition was granted by the board at its meeting, February 10, 1925, on certain conditions, and petitioner requested a modification of these conditions as to the existing certificate of occupancy to change to the proposed certificate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects egress from termination of fire escape, *on condition* that the fire escape shall be carried to the yard level with egress therefrom through fence to yard of adjoining premises; and that the premises otherwise conform to the requirements of the certificate of occupancy.

99-22-S.

PETITIONER—Samuel Rosenblum, for Albert Levi, owner.

SUBJECT—Application for reopening—variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—138 West 34th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition reopened and resolution modified.

THE VOTE TO MODIFY—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison and Connell, Fire Chief Kenlon, Superintendents Brady, Kleinert, Moore and McDermott 9

Negative 0

Absent: Messrs. Kennedy and Holland, Deputy Fire Commissioner Hannon and Superintendent Reville 4

THE RESOLUTION:

(99-22-S)

WHEREAS, Samuel Rosenblum, for Albert Levi, owner, filed, January 24, 1922, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 138 West 34th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"1. Plan of vestibule is not clear; obstruction by showcase not permitted. (Also egress from the fire escapes must be through a fireproof passageway and so indicated on plans.)";

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 98 ft. 9 in. in area. OCCUPIED: 1st story, store; 2nd story, salesrooms, 8 persons; 3rd story, men's tailor, 9 persons; 4th story, furrier, 5 persons; 5th story, cloaks and suits, 13 persons; the means of egress consisting of an interior stairway extending from the 1st story to the roof, enclosed in fire resisting partitions with kalameined doors at the openings, a fire escape on the rear of the building with landing on roof of extension in the 2nd story, with counter-balanced stairway to adjoining yard and with fireproof windows on the course of the fire escape, one on each story being a casement sash; and

WHEREAS, petitioner contends that the show window in the entrance hall is permanently built in and rigid and that there is a fireproof door directly from the entrance to the hallway shutting off the stairway and hallway from this show window; and

WHEREAS, the petitioner, in view of the light occupancy, requests that the means of exit be considered adequate; and

WHEREAS, this petition was granted by the board at its meeting, April 11, 1922, on certain conditions, and petitioner now requests a modification of these conditions as to egress from the termination of fire escapes, egress to adjoining yard being blocked.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted* as to egress from the rear fire escape by means of a direct connection from the 2nd story extension to the extension roof of the adjoining premises, with egress therefrom through plain glass windows, *on condition* that consent of the adjoining owner is filed with the bureau of buildings, and that the conditions remain unchanged, and that the decision of the superintendent of buildings as to the vestibule and extending hall partitions to the street be and it hereby is *affirmed* and the petition as to this item be and it hereby is *denied*.

PETITIONER—National Automatic Sprinkler Association.

SUBJECT—Proposed amendments to the Sprinkler Rules.

APPEARANCES—

For Petitioner: Ira G. Hoagland, Eugene A. Drumm, Ormond J. Burke, Henry A. Fiske, Chas. Adams, Earl W. Harrington, E. P. Boone, J. H. McDowell and W. B. Plumer.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition laid over to May 8, 1925, at 10 a. m.

CASES DISMISSED.

Variations of the Labor Law.

The chairman called attention to the following cases, where notices of intention to petition were offered for filing; but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(1336-24-S)

Filed November 13, 1924—Premises 241 Lafayette street, Manhattan. Order of the fire commissioner, labor law. Petitioner, C. E. Doppeler. Dismissed for lack of prosecution.

(1416-24-S)

Filed December 1, 1924—Premises 818 Broadway, Manhattan. Orders of the fire commissioner, labor

MINUTES

law. Petitioner, Leo Silver. Dismissed for lack of prosecution.

Appliances Submitted for Approval.

(1256-24-SA)

Filed October 23, 1924—Approval of Needham Fuel Oil Burner. Petitioner, Needham Oil Burner Company. Dismissed for lack of prosecution.

(1298-24-SA)

Filed November 1, 1924—Approval of Continental Oil Burner. Petitioner, Continental Oil Burner Corporation. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell, Fire Chief

Kenlon, Superintendents Brady, Kleinert, Moore and McDermott 10
Negative 0
Absent: Mr. Kennedy, Deputy Fire Commissioner Hannon and Superintendent Reville 3

THE RESOLUTION:

WHEREAS, the foregoing petitioners have filed with the board of standards and appeals petitions for variation from the requirements of the labor law affecting the premises noted; and for approval of the devices noted; and

WHEREAS, the foregoing petitioners have failed to complete their papers, although duly notified to do so.

Resolved, that the petitions be and hereby are *dismissed* for lack of prosecution.

Adjourned 5.35 p. m.

EDWARD V. BARTON, *Acting Secretary.*

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday May 8, 1925, at 10 a. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, *except when tanks of unlimited capacities are supported on structures altogether independent of buildings.*

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

PUBLIC HEARING

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank be of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting structures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and stand hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a

by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall

PUBLIC HEARING

be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($\frac{1}{2}$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building

line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require

PUBLIC HEARING

special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing. Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

8 feet in 12 foot bays;

9 feet in 11 foot bays;

10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at

least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

- (a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.
 (b) For Conran* one (1) inch heads, 5 feet.
 (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.
 (b) For Conran* one (1) inch heads, 5 feet.
 (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

Size of Pipe		Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1	"	2 heads
$1\frac{1}{4}$	"	3 "
$1\frac{1}{2}$	"	5 "
2	"	10 "
$2\frac{1}{2}$	"	20 "
3	"	36 "
$3\frac{1}{2}$	"	55 "
4	"	80 "
5	"	140 "
6	"	200 "
7	"	300 "
8	"	420 "

- (b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads

PUBLIC HEARING

in said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] *overflow* domestic service or other connections to the same sewer or house drain, or if *carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.*

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

At the base of the main riser;

At each alarm valve;

At each dry-pipe valve;

At each gravity tank;

At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the building are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] *shall be not less than 1 inch in size where floor valves are not over 2½ inches in size and 1¼ inches where floor valves are larger, and connected to a main drain riser of not less than 1½ inches in size.* The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] *In all wet-pipe automatic sprinkler systems a test pipe of not less than ¾ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than 1¾ inches in diameter in upper story and arranged to discharge, through a ½-inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.*

In all dry-pipe automatic sprinkler systems a ¾-inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a ¾-inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

Above dry-pipe valves;

Below dry-pipe valves;

PUBLIC HEARING

At the pressure tank;
At the air compressor;
Above the alarm valve;
Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] *non-corrosive* material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] *non-corrosive* material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] *non-corrosive* material.

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy

PUBLIC HEARING

70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

Rule 33. Approval of Sprinkler System [Tests]. Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. Non-fireproof Business Buildings. Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. Dangerous or Hazardous Buildings. Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. Factories and other Buildings. Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. Theatre Buildings. Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. Firework Storage. Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. Nitro-Cellulose Products. Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. Inflammable Motion-Picture Films. Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. Existing Installations and Approvals. Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. Communicating Openings. When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. Maintenance Inspections. Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. Open Sprinklers. When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

WILLIAM J. McDERMOTT....Supt. of Buildings, Richmond

WILLIAM J. O'GORMAN, Secretary

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Minutes of Meeting, Board of Appeals, April 14, 1925.
- Minutes of Special Meeting, Board of Appeals, April 14, 1925.
- Notice of Public Hearing.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, on Tuesday, April 21, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, April 28, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALL OF CLERK'S CALENDAR.

Tuesday, April 21, 1925, at 2 p. m.

Building Zone Cases.

237-25-BZ.
APPLICANT—Wm. F. Doyle, for Bee Dee Realty Co.
owner.
PREMISES—38-44 State street, Brooklyn.
TO PERMIT in a business district extending from an
unrestricted district the erection and maintenance
of a garage for the storage of more than five
(5) motor vehicles.

1358-24-BZ.
APPLICANT—Murray Klein, for Lirpa Realty, owner.
PREMISES—57-59 West 132nd street, Manhattan.
TO PERMIT in a business district the alteration and con-
version of occupancy from a stable for more than
five (5) horses to a garage for the storage of
more than five (5) motor vehicles.

BOARD OF APPEALS.

Tuesday, April 21, 1925, at 10 a. m.

Appeals from Administrative Orders.

136-25-A—Northwest corner of Woodhaven avenue and
Ridgewood avenue, Woodhaven, Queens

137-25-A—95 Buckingham road, Brooklyn.

138-25-A—Foot of Amity and Congress streets, Brooklyn

139-25-A—48-56 Hamilton avenue, Brooklyn.

160-25-A—225 West 254th street, The Bronx.

161-25-A—Northeast corner of Shore road and 96th street,
Brooklyn.

162-25-A—Northeast corner of Waldo avenue and Living
ston avenue, The Bronx.

168-25-A—57-59 Second avenue, Manhattan.

176-25-A—642 West 57th street, Manhattan.

1433-24-A—16-26 Northern avenue, Manhattan.

1462-24-A—186-188 Wooster street, Manhattan.

1508-24-A—420-438 Oakland street and 1-11 Paidge ave-
nue, Brooklyn.

CALENDAR

- 54-25-A—248-254 West 60th street and 549-555 West 59th street, Manhattan.
 01-24-A—6701 Ridge boulevard, Brooklyn.
 10-24-A—1038 Ocean avenue, Brooklyn.
 82-25-A—East side Ranton street, corner of Newtown Creek, Brooklyn.
 16-24-A—1342 Park avenue, Manhattan.
 88-24-A—37-65 Franklin avenue and 22-46 Skillman street, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals a public hearing under the provisions of the building zone resolution, *Tuesday morning, April 21, 1925*, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:

AL. NO. 5-25-BZ—Application, January 2, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Irville Realty Corp., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northwest corner of Cortel-you road and Gravesend avenue, Brooklyn.

AL. NO. 402-24-BZ—Application, March 18, 1924, under the building zone resolution, of Charles H. Mohr, applicant, on behalf of Mohr-Steiber Holding Co., Inc., owner, to permit in a business district the maintenance of a prohibited use, iron works in the first story and in the cellar of an existing building; premises 449 West 46th street, Manhattan.

AL. NO. 1421-24-BZ—Application, December 2, 1924, under the building zone resolution, of David G. Ludins, applicant, on behalf of Elliot Place Holding Co., owner, to permit in a residence district extending from a business district the erection and maintenance of a business building; premises southeast corner of Jerome avenue and Elliot place, The Bronx.

AL. NO. 1539-24-BZ—Application, December 31, 1924, under the building zone resolution, of Charles E. Anderson, applicant, on behalf of George V. Fink and L. F. Fink, Inc., owner, to permit in a residence and "E" area district the erection and maintenance of a building nearer than ten (10) feet from the street line; contrary to section 15, subdivision (d) of the building zone resolution; premises 1977 East 22nd street, Brooklyn.

AL. NO. 52-25-BZ—Application, January 12, 1925, under the building zone resolution, of Samuel Rosenblum, architect, on behalf of Richard Weber, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 266-278 Park circle, Brooklyn.

AL. NO. 1480-24-BZ—Application, December 16, 1924, under the building zone resolution, of Emil Guterman, applicant, on behalf of Paola Gerardi, owner, to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles; premises 105-107 Jackson street, Brooklyn.

AL. NO. 7-25-BZ—Application, January 2, 1925, under the building zone resolution, of Philip J. Sinnott, applicant, on behalf of Gil-

man, Schlesinger Bldg. Co., owner, to permit in a residence and 1½ times height district the erection and maintenance of a building to be used for business purposes, also the erection of the street wall to a height exceeding the limit required by the building zone resolution; premises 1896-1898 Arthur avenue, The Bronx.

CAL. NO. 1252-24-BZ—Application, October 22, 1924, under the building zone resolution, of Morris Perlstein, architect, on behalf of Rite-built Realty Corp., owner, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northwest corner of Forest avenue and Linden street, Ridgewood, Borough of Queens.

CAL. NO. 1268-24-BZ—Application, October 25, 1924, under the building zone resolution, of Charles B. Meyers, architect, on behalf of William H. Seaich, owner, to permit in a business district the conversion of occupancy from storage purposes to a garage for the storage of more than five (5) motor vehicles; premises 142-156 East 31st street, Manhattan.

CAL. NO. 275-25-BZ—Application, March 11, 1925, under the building zone resolution, of Leo S. Sheridan, applicant and owner, Maurice F. Hickey, lessee, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 88-110 Crown street, Brooklyn.

WILLIAM E. WALSH, *Chairman.*

BOARD OF STANDARDS AND APPEALS.

Tuesday, April 21, 1925, at 2 p. m.

Petitions for Variations.

- 982-24-S—614-618 West 131st street, Manhattan.

THE RESOLUTION:

(1370-24-A)

WHEREAS, U. S. E. Corporation, lessee, filed, November
19, 1924, an appeal, with the board of appeals, from a de-
cision of the fire commissioner, affecting premises 296-322
Vernon avenue, Long Island City, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, Alt. App.
No. 2421-24, dated November 12, 1924, reads:

"1. Burner must be of a type approved by the Board
of Standards and Appeals.";

and

WHEREAS, the building is non-fireproof, one story in
height, 162 ft. by 200 ft., irregular in area; OCCUPIED
for the manufacture of auto bumpers; and

WHEREAS, it is proposed to install a fuel oil burning system,
consisting of a 1,500-gallon fuel oil tank, a Viking pump,
Tate-Jones burners and the necessary valves and piping; to
be used for the heat treatment of metal; and

WHEREAS, this appeal was granted by the board at its
meeting January 13, 1925, on certain conditions, and appel-
lant requested a modification of the time limit.

Resolved, that the decision of the fire commissioner be
and it hereby is *modified*, and the appeal be and it hereby
is *granted*, restricting the use and operation of the burner
to industrial operation of annealing and metal treating

MINUTES

furnaces, including the use of the Viking pump, *on condition* that all moving parts of the pump in contact with the oil shall be of bronze or brass; that the fuel oil installation otherwise throughout shall comply with the fuel oil rules of the board of standards and appeals; and that all necessary permits shall be obtained within ninety (90) days from date of this action.

83-23-A.

APPELLANT—John DeHart, for Henry N. Berne, lessee.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—818 Bryant avenue, The Bronx.

APPEARANCES—

For Appellant: Henry N. Berne, and John DeHart.

ACTION OF BOARD—Appeal reopened and extension of permit granted.

THE VOTE TO GRANT EXTENSION OF PERMIT—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(83-23-A)

WHEREAS, John DeHart, for Henry N. Berne, lessee, filed, January 22, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 818 Bryant avenue, Bronx; and

WHEREAS, the order of the fire commissioner reads:

"1. Discontinue the manufacture, mixing, or compounding of paints, varnishes or lacquers on these premises for the reason building in part is used for dwelling purposes, and for the reason, a business may not be conducted on these premises as the same is located in a residential zone."

and

WHEREAS, the building is frame, two stories and basement in height, 25 ft. by 45 ft. in area. OCCUPIED: Basement, iron work shop, 1 person; upper stories, dwelling; the building being located in a residence district; and

WHEREAS, appellant contends that the building was erected in 1913 and that the basement was designed for and has been used for business purposes ever since the erection of the building; and

WHEREAS, this appeal was granted by the board at its meeting February 17, 1923, for a temporary period of two years, and appellant requested an extension of time.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* to permit the temporary conduct of business on these premises for a period of two years from the date of this action, and to permit the temporary storage, maintenance, mixing and compounding of paints for said period, *on condition* that the storage and use of alcohol be limited to one barrel at any one time.

1069-24-A.

APPELLANT—Croker Nat'l Fire Prevention Eng. Co., for 227-231 East 22nd St. Corp., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—227-231 East 22nd street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Ken-

nedy, Dowd, Gunnison and Fire Chief

Kenlon 5

Negative 0

Absent: Messrs. Connell and Holland..... 2

THE RESOLUTION:

(1069-24-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for 227-231 East 22nd Street Corporation, owner, filed, August 26, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 227-231 East 22nd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 17, 1924, reads:

"Order No. 55918-F:

"1. Provide a separate and distinct system of *AUTOMATIC SPRINKLERS* throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

and

WHEREAS, the premises consist of three non-fireproof buildings, three, four and five stories in height, having a total area of 75 ft. by 98 ft. 9 in. on the 1st story and a typical floor area of 75 ft. by approximately 50 ft.; connected on each story above the 1st story by horizontal openings in the division walls. OCCUPIED: 1st story of No. 227, blacksmith, and the remainder of the premises as office and for the manufacture and storage of store fixtures, 18 persons in the entire premises; and

WHEREAS, appellant contends that the means of exit are adequate for the small occupancy and proposes to install a thermostatic fire alarm and also additional water casks and fire extinguishers.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, holding the order in abeyance, *on condition* that the woodworking use on premises shall be vacated and discontinued on or before September 25, 1925.

Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(1376-24-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Columbia University, owner, filed, November 20, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2920-2940 Broadway (Schermerhorn Hall), Borough of Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"Order No. 23584-LC:

"A recent inspection of Schermerhorn Hall showed that chemicals are being stored and used without the necessary Fire Department permit (Section 10, Chapter 10, Code of Ordinances.) Before such a permit may be issued it is necessary for you to fill out and return the enclosed application blank and to comply with the following order:

MINUTES

"2. Provide fireproof doors and transoms for laboratories, Department of Zoology, 4th story. Section 20, Chapter 12, Code of Ordinances.";

and

WHEREAS, the building is fireproof, four stories in height, 222 ft. by 85 ft. in area; OCCUPIED as a museum, class rooms and laboratories, etc.; and

WHEREAS, appellant contends that no hazardous or explosive chemicals are used and that the doors in question are 2¾ in. thick wooden doors (some of these having glass panels), and contends further that it would be an unnecessary hardship to replace these doors with fireproof doors and transoms.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that any chemicals maintained on the premises shall be confined to 4th story and stored in fireproof enclosure, with not more than one opening thereto, protected with self-closing fireproof door; that the enclosure shall be vented to the outer air; and that all necessary permits shall be obtained within thirty (30) days.

1

THE RESOLUTION:

(1498-24-A)

WHEREAS, Emmanuel M. Frank, for Alfall Products Corp., owner, filed, December 20, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 51 West 3rd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 3, 1924, reads:

"Order No. 66733-F:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the building is non-fireproof, seven stories (86 ft.) in height, 25 ft. 1⅞ in. by 98 ft. in area; OCCUPIED as a tenant factory (hat and clothing manufacturers), 100 persons in entire building; and

WHEREAS, appellant contends that the building is equipped with a fire alarm system; a fireproof stairway enclosed in fireproof partitions and fire escapes on the front and rear of the premises and fire buckets distributed throughout the building.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall not be increased in height or area.

1540-24-A.

APPELLANT—William Higginson, for Salant & Salant, owners.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—472-482 Knickerbocker avenue and 230-242 Bleecker street, Brooklyn.

1

THE RESOLUTION:

(1540-24-A)

WHEREAS, William Higginson, for Salant & Salant, owners, filed, December 31, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 472-482 Knickerbocker avenue and 230-242 Bleecker street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 10, 1924, reads:

"Order No. 68608-F:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ in. regulation Fire Dept. outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ in. standard hose attached thereto.";

and

WHEREAS, the building is non-fireproof, five stories (65 ft.) in height, 90 ft. by 120 ft. 4 in. (approximately 10,237 sq. ft.) in area; OCCUPIED as a shirt factory, 153 persons above the 1st story; and

WHEREAS, appellant contends that the area of the building is only slightly in excess of the requirement for non-standpipe building, and that the building is amply provided with exits and protected with a sprinkler system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall be equipped and maintained with not less than a one-source sprinkler system; and *granted* so long as conditions as to occupancy and use otherwise remain unchanged.

1119-22-A.

APPELLANT—Cornell Vacuum Burner Co., Inc., substituted for Otto J. Sambach, for Bethany Deaconess Hospital, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—237 St. Nicholas avenue, Brooklyn.

0

Absent: Mr. Holland

1

THE RESOLUTION:

(1119-22-A)

WHEREAS, Cornell Vacuum Burner Co., Inc., substituted for Otto J. Sambach, for Bethany Deaconess Hospital, owner, filed, September 14, 1922, an appeal, with the board of appeals, from a decision of the fire commissioner affecting premises 237 St. Nicholas avenue, Brooklyn; and

WHEREAS, the decision of the fire commissioner reads:

"5. Inspection shows that tanks and piping have been installed without inspection or test.

MINUTES

"7. Tanks must be encased in at least 12 in. P. C. concrete.

"8C. Tanks must be tested in presence of a city official.

"10. Gravity feed not permitted, an approved anti-syphon system must be provided; details of syphon heater must be filed.

"11D. Remote control for pumps must be clearly shown.

"11F. Overflow pipes from pumps and burners shall be at least one size larger than supply pipes and be carried back to tank.

"11G. Trench must be provided with piping inside of building.

"11K. Pumps must be of a type approved by the Board of Appeals.

"11L. An overload or by-pass valve shall be installed at pump; details must be clearly shown.

"12. Control valve as per Rule 14 should be provided and same must be indicated on plan as such.

"Provision shall be made to insure the cessation of oil supply from tank to burner when pump is not at work.

"13. All provisions of Rule 16 must be complied with and clearly shown on plans."

and
WHEREAS, the premises consist of several buildings, fireproof and non-fireproof, 5 stories and 2½ stories in height, 110 ft. by 100 ft. in area; OCCUPIED as a hospital; a two-story brick laundry and a three-story brick dormitory; it is proposed to install a fuel oil burning system consisting of two tanks located in an open yard, buried beneath the ground, the necessary pipes, valves, etc.; and

WHEREAS, appellant proposes in lieu of complying with the objections stated, to do the following:

"5. Inspection was applied for and denied.

"7. Rule 5 applied to tanks in buildings. These tanks are 30 ft. distant from any building. Rule 10 permits tanks to be covered with 2 in. cement mortar, where same are buried underground.

"8. See Rule 8, these tanks were tested to 100 per cent pressure by manufacturer.

"10. Gravity feed not intended; your approval of anti-syphon system requested.

"11B. Supply of oil can be controlled by valves at tanks with stems extending above ground in case of emergency.

"11F. Return pipe is 2 in., supply to burners is 1 in.

"11G. Owing to elevation of tanks it was not practicable to install piping under cellar floor. All outside piping is enclosed in a concrete trench and covered with asbestos covering.

"11K. Pumps are of approved type.

"11L. Instead of an overload valve a standpipe 18 in. high has been provided.

"12. A syphon breaker has been installed on the supply pipe to burners.

"13. Manufacturer is awaiting decision of board."

and
WHEREAS, this appeal was granted by the board at its meeting October 24, 1922, as to Items 11F and 11G on condition that the oil supply lines be maintained close to the walls, and appellant now contends that there are practical difficulties in complying with the remaining items and that under the present fuel oil rules compliance with these items would not be required;

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 5, *on condition*, that standard wrought-iron pipe shall be used throughout the fuel oil burning equipment; as to Item 8, *on condition*, that satisfactory proof shall be submitted to the fire commissoiner as to the capacity and strength of tank; as to Item 13, *on condition* that the door of the fire-box to boiler shall be equipped with self-closing device; and *granted* as to the other items stipulated in appeal, *on condition* that the installation otherwise complies with the fuel oil rules now in force

1375-24-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Columbia University, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—2920-2940 Broadway, School of Mines, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Dowd, Connell and Fire

Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(1375-24-A)

WHEREAS, Croker National Fire Prev. Eng. Co., for Columbia University, owner, filed November 20, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2920-2940 Broadway, School of Mines, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 29, 1924, reads:

"1. Provide a fireproof door at the entrance to each laboratory and stock room. Section 20, Chapter 12, Code of Ordinances."

and

WHEREAS, the building is fireproof, four stories in height, 145 ft. by 57 ft. in area; OCCUPIED as a college building—class rooms, laboratories, offices, etc., and stock-rooms in the sub-basement; and

WHEREAS, appellant contends that the doors in question are wooden doors 2⅞ in. thick—some having wooden and others plate glass panels, and that it would be a hardship to provide fireproof doors at these openings.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the existing 2⅞ in. hardwood doors to laboratories shall be equipped with self-closing device; and that any glass panels therein shall be glazed with wire glass.

1378-24-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Columbia University, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—2920-2940 Broadway, Havemeyer Building, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Dowd, Connell and Fire

Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(1378-24-A)

WHEREAS, Croker National Fire Prev. Eng. Co., for Columbia University, owner, filed, November 20, 1924, an appeal with the board of appeals, from an order of the fire commissioner, affecting premises 2920-40 Broadway (Havemeyer building), Manhattan; and

WHEREAS, the order of the fire commissioner, undated, reads:

"1. Provide fireproof doors and transoms for all the laboratories. Section 20, Chapter 12, Code of Ordinances.

MINUTES

"6. Equip all door and transom openings which connect hall in basement and the chemical stock room with fireproof doors and transoms. Section 20, Chapter 12, Code of Ordinances.

"10. Properly vent chemical stock room to the outer air. Section 20, Chapter 12, Code of Ordinances.

"12. Remove all benzole, the storage of which is prohibited by the Code of Ordinances from these premises. Section 112-2A, Chapter 12 and Section 114-2, Chapter 10, Code of Ordinances."

and

WHEREAS, the building is fireproof, four stories in height, 222 ft. by 89 ft. in area; OCCUPIED as a college building—class-rooms, chemical laboratories, offices, etc.; a vault for the storage of chemicals being located in the basement at the westerly side of the building; and

WHEREAS, appellant contends that all doors leading from the laboratories are wooden, 2½ in. thick, and glazed with heavy glass panels; in re. Item 6, contends that the door and transom openings, which connect hall in basement and chemical stock room, are fireproof; in re. Item 10, contends that there is a 12 in. pipe, opening into an areaway outside the building, venting stock room; in re Item 12, contends that only a one day's supply is kept within the building—the main supply being stored in a metal cabinet located outside the north wall of the building, near the westerly end.

Resolved, that the order of fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Items 1 and 6, *on condition* that existing hardwood doors to laboratories shall be equipped with self-closing device; that any transoms shall be made fixed and glazed with wire glass; *denied* as to Item 10; *granted* as to Item 12 *on condition* that not more than ten (10) gallons of benzole shall be kept on the premises at any one time, stored and maintained in an approved safety can.

Absent: Mr. Holland 1

THE RESOLUTION:

(1367-24-A)

WHEREAS, Croker National Fire Prev. Eng. Co., for French Hospital, owner, filed, November 18, 1924, an appeal with the board of appeals, from an order of the fire commissioner, affecting premises 450-8 West 34th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 25536-LC, dated September 15, 1924, reads:

"1. Provide a fireproof vault, located outside of the building, in which to keep all inflammable X-Ray film. Said vault to be constructed, located, ventilated and protected in accordance with plans to be submitted to and approved by the Fire Department."

and

WHEREAS, the building is fireproof, six and seven stories in height, 103 ft. by 99 ft. (irregular) in area; OCCUPIED as a hospital—approximately 30 persons per story; and

WHEREAS, appellant proposes to store the X-Ray film (500 lbs.) in a fireproof room, having windows to the open

air, located on the roof of the six-story section of the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the cellulose material stored on premises shall be restricted to X-Ray negative films; that they shall be stored in a fireproof vault, located on the roof of six-story building, ventilated to outer air, with no openings to any interior portion of the structure and not more than one door opening out directly on the roof equipped with self-closing device.

THE RESOLUTION:

(1532-24-BZ)

WHEREAS, Moore & Landsiedel, for Adele Santini, owner, filed, December 29, 1924, an application, under the building zone resolution, to permit the extension, from a business district into a residence district, of a proposed building to be used for business purposes; premises east side of Jerome avenue, 100 ft. south of 190th street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is a business district; 190th street and Morris avenue are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 9, 1924, in acting on N. B. App. No. 2311-24 reads:

MINUTES

"1. Proposed extension of building for business purposes into residence district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, eight stories in height, with a frontage of 76 ft. 7 in. and a depth of 151 ft. 9 $\frac{3}{8}$ in. in the 1st story, and a depth of 101 ft. 2 $\frac{3}{8}$ in. above; to be occupied as stores, offices and storage; an irregular portion in rear of 1st story 38 ft. in depth extends into the residence district; and

WHEREAS, applicant has established his basis of appeal under section 7-c of the building zone resolution, and the board deemed it an equitable adjustment to permit him to erect a one-story extension on the portion of the property within the residence district.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the proposed extension be restricted to a building one story in height; that a rear yard, not less than 6 ft. in depth throughout the entire width of the premises, be provided and maintained; that the entire premises be restricted in operation and use and conducted as a general furniture storage warehouse; that no automobiles be stored or maintained on the premises; that the entire structure be erected of fireproof construction; and that all permits necessary for the prosecution of the work be obtained within nine months and the building completed within eighteen months from the date of this action.

98-25-BZ.

APPLICANT—John De Hart, for Knickerbocker Ice Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—305-313 West 67th street and 308 West 68th street, Manhattan.

APPEARANCES—

For Applicant: John De Hart.

For Opposition: Frank W. Astrarita.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Holland	1

THE RESOLUTION:

(98-25-BZ)

WHEREAS, John De Hart, for Knickerbocker Ice Co., owner, filed, January 23, 1925, an application, under the building zone resolution, to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five motor vehicles; premises 305-313 West 67th street and 308 West 68th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that north side of West 67th street, west of a point 100 ft. west of West End avenue, is an unrestricted district, all of south side of West 67th street, west of West End avenue, and West 68th street is an unrestricted district and West End avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 21, 1925, in acting on N. B. App. No. 30-1925, reads:

"1. Garage for more than five motor vehicles is unlawful use in a business district. Section 4, Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 120 ft. on West 67th street and 25 ft. on West 68th street; to be occupied as a garage for the storage of more than five motor vehicles, a portion of the proposed garage for a distance of 20 ft. in width is in the business district; and

WHEREAS, applicant has established his basis of appeal and properly comes within the use district exception under section 7-b of the building zone resolution, and the board deemed it an equitable adjustment to permit him to use the 20 ft. of the property which is contiguous to and part of same plot adjoining the business district for the same purpose as the remainder of the premises in the unrestricted district.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and the same is *granted on condition* that the building be restricted to a two-story structure above grade; that the floor arches shall be constructed of steel beams and reinforced concrete slabs; that the roof shall be fire-retarded in accordance with the rules of the board of standards and appeals; that the gable walls shall be unpierced throughout their entire height and length; that no skylight shall be installed within 25 ft. of the easterly gable wall, and any skylight installed shall be glazed with plain glass, protected with wire guards above and below; that there shall be no vehicular entrance within the business use area of the plot; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

305-24-BZ.

APPLICANT—Philip J. Sinnott, for Emanuel Strauss, owner.

SUBJECT—Application for reopening (re: order of fire commissioner) to permit partly in a business district and partly in a residence district and also in a "B" area district the conversion of occupancy from a five (5) car garage and storage use to a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1139 Ogden avenue, The Bronx.

APPEARANCES—

For Applicant: Philip J. Sinnott.

For Opposition: William B. Hogan, John Siemes, Antonio Baroni, William Deuchar, James H. Spellman and Charles O. Baese.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell and Fire Chief Kenlon	5
Negative: Mr. Kennedy	1
Absent: Mr. Holland	1

THE RESOLUTION:

(305-24-BZ)

WHEREAS, Philip J. Sinnott, for Emanuel Strauss, owner, filed, February 26, 1924, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district and also within a "B" area district, the conversion of occupancy of a building occupied as a five (5) car garage and also for storage to a garage for the storage of more than five (5) motor vehicles; premises 1139 Ogden avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14,

MINUTES

1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Ogden avenue is a business district and Lind (University avenue) is a residence district; and

WHEREAS, the order of the fire commissioner, dated January 26, 1924, reads:

"Order No. 22467-C:

"1. Reduce the storage of motor vehicles, the fuel tanks of which are not empty, to 5 cars. (Violation of the Building Zone Resolution.)";

and
WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 75 ft. and a depth of 53 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed the spirit of the zoning law will be maintained, and substantial justice supports the application by restricting this existing structure, 75-foot frontage, to the present area limitations as if it were subdivided into three units, each having a 25-foot frontage.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the existing building be not enlarged and that the motor vehicle storage capacity of the premises be limited to fifteen automobiles of the pleasure car type; that the rear and gable walls shall be unpierced throughout their entire height and length, except one opening to the rear yard not exceeding 3 ft. 8 in. in width; that the interior of the garage shall be fire-retarded in accordance with the rules of the board of standards and appeals; and that no gasoline storage equipment shall be maintained on the premises.

1394-24-BZ.

APPLICANT—Edward P. Doyle, on behalf of New York Consolidated Railroad Co. and New York Rapid Transit Corp., owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a gasoline selling station.

PREMISES AFFECTED—464 Flatbush avenue, Brooklyn.

APPEARANCES—

For Applicant: Edward P. Doyle.

For Opposition: Thomas Fleming Walsh.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6

Absent: Mr. Holland 1

THE RESOLUTION:

(1394-24-BZ)

WHEREAS, Edward P. Doyle, for N. Y. Rapid Transit Corp., owner, filed, December 17, 1924, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a gasoline selling station; premises 464 Flatbush avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Flatbush avenue is a business district and Ocean avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 19, 1924, in acting on Alteration Application No. 2455-24, reads:

"1. Gasoline selling station is not permitted in a residential district.";

and

WHEREAS, the premises are located partly in a business and partly in a residence district and consist of an irregular plot of ground upon which there exists a gasoline selling station; it is proposed to extend this gasoline station so as to cover part of the residence portion of the plot; and

WHEREAS, the board deemed that the applicant submitted no proof to substantiate his basis of appeal under section 21, namely, hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

27-25-BZ.

APPLICANT—William F. Doyle, for Efficient Building Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—East side of Jerome avenue, 200 feet north of Clifford place, The Bronx.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Mr. Kennedy 1

Negative: Chairman Walsh, Messrs. Dowd, Gunnison and Connell 4

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(27-25-BZ)

WHEREAS, William F. Doyle, for Efficient Building Corp., owner, filed, January 8, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises east side of Jerome avenue, 200 ft. north of Clifford place, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue and East 175th street are business districts and Townsend avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 26, 1924, in acting on N. B. Application No. 3180-24, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 100 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant failed to establish his basis of appeal under section 7-g, and the board did not deem his failure to obtain 80 per cent of consents a hardship sufficient under Rule 21 to warrant the granting of this application.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1415-24-BZ.

APPLICANT—John E. Kerby, on behalf of Harry Abramowitz, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

MINUTES

PREMISES AFFECTED—608 Westchester avenue, southwest corner of Cauldwell avenue, The Bronx.

APPEARANCES—

For Applicant: John E. Kerby and Harry Abramowitz.

For Opposition: Benjamin Burrowes, Lillian D. Rock, Mark J. Bricker, Teresa Duval, Charles Hegge and Mayer Stern.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Mr. Gunnison 1

Negative: Chairman Walsh, Messrs. Dowd,

Kennedy and Connell 4

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(1415-24-BZ)

WHEREAS, John E. Kerby, for Harry Abramowitz, owner, filed, December 1, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 608 Westchester avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Westchester avenue, Eagle avenue and Cauldwell avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered November 15, 1924, in acting on N. B. Application No. 2702-24, reads:

"1. Erection of proposed garage for the storage of more than five motor vehicles in a business district is contrary to the provisions of the Building Zone Resolution."

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height, with a frontage of 153 ft. and a depth of 155 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, there was vigorous opposition by affected property owners and the representatives of the Lebanon Hospital property on the corner diagonally opposite, to the granting of this application, and the board deemed the invasion unwarranted.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

82-25-BZ.

APPLICANT—George McCauslan, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a gasoline selling station.

PREMISES AFFECTED—Northeast corner of Bronx boulevard and 219th street, The Bronx.

APPEARANCES—

For Applicant: George McCauslan.

For Opposition: Clarence E. Pitts and Emil Hondel.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell.... 5

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(82-25-BZ)

WHEREAS, George McCauslan, owner, filed, January 20, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a gasoline selling station; premises northeast corner of Bronx boulevard and East 219th street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Bronx boulevard, East 219th street and Carpenter avenue are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 22, 1924, in acting on N. B. App. No. 2957-24, reads:

"Proposed occupancy of premises in residence district for business purposes is contrary to the provisions of the Building Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 20 ft. and a depth of 20 ft.; the entire premises to be occupied as a gasoline selling station; and

WHEREAS, the board deemed that applicant did not substantiate his basis of appeal under section 21, and there being much vacant property contiguous to the plot under appeal subject to same consideration if this prohibitive use variation prevailed and opposition on the part of the affected property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1407-24-BZ.

APPLICANT—McLain Realty Company, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—6-8 Linden avenue, Flushing, Borough of Queens.

APPEARANCES—

For Applicant: R. Richardson.

For Opposition: Sarah R. Schrader.

Negative 0

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(1407-24-BZ)

WHEREAS, McLain Realty Co., owner, filed, November 26, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 6-8 Linden avenue, Flushing, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Linden avenue, 35th avenue and Northern boulevard are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 6, 1925, in acting on N. B. App. No. 6102-24, reads:

"Erection of this garage in a business district is prohibited by zone law."

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height, with a frontage of 50 ft. and a depth of 125 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant substantiated his basis of appeal by filing 89 per cent of consents of affected property owners, and the board deemed the granting of this application a reason-

MINUTES

le adjustment in view of the surrounding conditions and the relation of the proposed site to the unrestricted district.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and hereby is *granted on condition* that the building be restricted to two stories in height, constructed fireproof; that the rear and gable walls shall be unpierced throughout their entire length and height; that a rear yard of not less than 10 ft. shall be maintained at the second level; that the northerly gable wall, where exposed, shall be finished in light colored brick; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; that any gasoline storage equipment installed shall be located at the extreme southerly end at the street front; that there shall be no advertising sign displayed on these premises, other than one projecting sign indicating the title of the garage; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

20-25-BZ.
APPLICANT—Emery Roth, for 232 Madison Avenue Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a 1½ times and a 2 times height district a uniform set back line above the limiting height of street wall.

PREMISES AFFECTED—232 Madison avenue and 15-17 East 37th street, Manhattan.

APPEARANCES—
For Applicant: John Caldwell Meyers, Emery Roth and John P. Fox.

For Opposition: None.
ACTION OF BOARD—Application granted on condition.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell..... 5
Negative 0
Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:
(120-25-BZ)
WHEREAS, Emery Roth, for 232 Madison Avenue Corp., owner, filed, January 27, 1925, an application, under the building zone resolution, to permit in a 1½ times and a 2 times height district a uniform set back line above the limiting height of street wall; premises 232 Madison avenue and 15-17 East 37th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that Madison avenue, westerly side, is a business use and 1½ times height district; East 37th street, north side, is a business use and 2 times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 12, 1925, in acting on N. B. Application No. 710-24, reads:

"1. This building is in a 1½ times district governed by a street 75 feet wide and set backs should be made according to Building Zone Resolution, Section 8D.";
and

WHEREAS, the proposed building is to be of fireproof construction, 16 stories in height, 182 ft. 10 in., with a frontage of 150 ft. and a depth of 98.75 ft.; to be occupied as show rooms, offices and 25 per cent manufacturing; and

WHEREAS, it is proposed to erect the street wall to a height of 118 ft. 3 in., and permission is requested to have the set back line above this limit project two ft. beyond the limiting plane for a portion of the structure; and

WHEREAS, affected property owners appeared in support of the application and the board deemed it a hardship to deny so slight a variation and considered the matter merely a technical adjustment.

Resolved, that the board of appeals does hereby *make a variation* in the application of the height district regulations of the building zone resolution, and that the application be and it hereby is *granted*, only so far as it affects the set back requirement on the East 37th street front for a distance of 100 ft. westerly from Madison avenue, *on condition* that the street walls without a set back shall not exceed a height of 118 ft. 3 in.; that the requirements of the building zone resolution shall be complied with in all other respects; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the work diligently prosecuted to completion.

BOARD OF APPEALS

SPECIAL MEETING.

TUESDAY AFTERNOON, APRIL 14, 1925.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon.

APPEALS FROM ADMINISTRATIVE ORDERS.

124-25-A.

APPELLANT—Cornell Utilities Co., Inc., for H. C. Parsons, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—13 Vandam street, Manhattan.

APPEARANCES—

For Appellant: William Porter.

ACTION OF BOARD—Laid over to April 28, 1925, at 2 p. m., on request of appellant's representative, to complete plans.

1188-24-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Gutta Percha & Rubber Mfg. Co., owner.

SUBJECT—Appeal from orders of fire commissioner.

PREMISES AFFECTED—37-65 Franklin avenue and 22-46 Skillman street, Brooklyn.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Laid over to April 21, 1925, at 10 a. m., on request of fire department representative.

96-25-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for C. F. Rohmann Sons & Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—78-88 Prince street, Brooklyn.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6

Absent: Mr. Holland 1

THE RESOLUTION:

(96-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for C. F. Rohmann Sons & Co., owner, filed, January 23, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 78-88 Prince street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated November 25, 1924, reads:

"1. Provide a separate and distinct system of *Automatic Sprinklers* throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

and

WHEREAS, the building is fireproof, five stories (66 ft. 7 in.) in height, 80 ft. by 60 ft. in area; OCCUPIED for the upholstering of furniture, 48 persons above the 1st story; and

WHEREAS, appellant contends that the building is equipped with a fire alarm system and also a National District Telegraph connection; that there are four city fire hydrants in the immediate vicinity and that it would be a hardship if required to install the sprinkler system.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

48-25-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Samuel Berman, owner.

SUBJECT—Appeal from orders of fire commissioner.

PREMISES AFFECTED—65 Fulton street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted in part and denied in part.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon

Negative

Absent: Mr. Holland

THE RESOLUTION:

(48-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for Samuel Berman, owner, filed, January 12, 1925, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 65 Fulton street, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated October 27, 1924, read:

"Order No. 65825-F:

"1. Provide a non-automatic sprinkler system in cellar * * *."

"Order No. 65826-F:

"1. Provide an automatic fire alarm complete with central office connection, in the cellar * * *";

and

WHEREAS, the building is non-fireproof, four stories in height, 39 ft. by 89 ft. in area in the 1st story and 39 ft. by 53 ft. in area above. OCCUPIED: Store and tenant factory, 10 persons above the 1st story, one story being vacant; the means of egress consisting of an interior stairway extending from the 1st story to the roof; a fire escape on the rear of the building with egress over extension roof to roof of adjoining extension at the rear; and

WHEREAS, appellant contends that the cellar is used for the storage of a small quantity of office furniture; that the occupant of the 1st story conducts a salesroom for office furniture and that the occupancy above the 1st story is small.

Resolved, that the order of the fire commissioner, No. 65826, be and it hereby is *reversed*, and the appeal as to this order be and it hereby is *granted*; that the order of the fire commissioner, No. 65825, be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

121-25-A.

APPELLANT—Cornell Utilities Co., Inc., for J. B. Melman, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—230 Corbin place, Brooklyn.

APPEARANCES—

For Appellant: William Porter.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon

Negative

Absent: Mr. Holland

MINUTES

THE RESOLUTION:

(121-25-A)

WHEREAS, Cornell Utilities Co., Inc., for J. B. Melman, owner, filed, January 27, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 230 Corbin place, Brooklyn; and
WHEREAS, the decision of the fire commissioner, rendered December 27, 1924, in acting on Alteration Application No. 10-24, reads:

"2. Note on tank drawing, tank will be tested in presence of a Fire Department Representative and afterwards coated with a suitable rust resisting material.

"6. Note on plan: 'Piping will be tested in presence of a Fire Department Representative.'

"11. Burners must be of a type approved by the Board of Standards and Appeals."

WHEREAS, the building is non-fireproof, two stories in height, 27 ft. by 44 ft. in area; OCCUPIED as a one-family dwelling; a fuel oil burning installation has been installed in the cellar, consisting of a Nokol burner, a 700-gallon outside buried storage tank, enclosed in 12 in. of concrete and a 55-gallon auxiliary tank; and
WHEREAS, appellant requests a modification of the decision of the fire commissioner, to accept a sworn affidavit to the shop test, and states that the piping is standard wrought iron piping.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 2, *on condition* that certificate of factory test shall be filed with the fire commissioner; as to Item 6, *on condition* that standard wrought iron piping shall be used throughout the installation; and, as to Item 11, *on condition* that the door of fire-box of boiler shall be equipped with a self-closing device; and that the installation shall otherwise comply with the fuel oil rules in all respects.

THE RESOLUTION:

(128-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for S. Weil & Co., Inc., owner, filed, January 28, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 379-385 De Kalb avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated November 13, 1924, reads:

"Order No. 65577-F:

"1. Install a standpipe system with risers 4 inches diameter * * *";

and

WHEREAS, the building is non-fireproof (mill construction), four stories in height, facing on two streets, with a frontage of 60 ft., a width across the rear of 96 ft. 6 in. and a depth of 157 ft. 6 in.; OCCUPIED as a factory with a total of 260 persons above the 1st story, one story being vacant; equipped with a sprinkler system with 10,000-gallon tanks on the roof and a 4 in. connection to Steuben street, and equipped with an interior fire alarm system and watchman's hourly time service; and

WHEREAS, appellant contends that the building is only 4 ft. high and that the area is approximately 10,250 sq. ft.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the sprinkler system now in use shall be brought up to the rules of this board for existing sprinkler systems; and *granted* so long as the occupancy and use otherwise remain unchanged.

APPELLANT—Croker National Fire Prevention Engineering Co., for Dominick Conti, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—900 Metropolitan avenue, Brooklyn.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(131-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for Dominick Conti, owner, filed, January 28, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 900 Metropolitan avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated November 18, 1924, reads:

"Discontinue the maintenance of a garage in the above premises, as same is of frame construction. Sec. 5, Chap. 5, Par. 4, Sec. 90, Chap. 5, Code of Ordinances.";

and

WHEREAS, the building is frame, two stories in height, 25 ft. by 46 ft. 6 in. in area. OCCUPIED: 1st story, storage of three automobiles; 2nd story, vacant; the premises being located in a business district; and

WHEREAS, appellant contends that the three cars are the property of the owner residing in the house on the front of the premises; there is one pleasure car and two trucks; that the building is constructed of wood studs, brick fill and appellant proposes to cement the inside of the walls of the 1st story, and that there is no gasoline stored on the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the 1st story of the structure at rear of premises, *on condition* that the 2nd story of the building be maintained vacant and unused; that the interior of garage, 1st story, shall be fire retarded in accordance with the rules of the board of standards and appeals; that no gasoline storage equipment be installed on the premises; that the capacity of garage storage shall be limited to three (3) automobiles, the property of the owner of the premises, and only during his occupancy of same; and that an unobstructed runway, open to the sky, shall be maintained from garage direct to street.

APPELLANT—Sommerfeld & Sass, for Fulton-Gold Corporation, owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—81-83 Fulton street and 53-57 Gold street, Manhattan.

APPEARANCES—
For Appellant: William G. Sommerfeld.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Holland 1

THE RESOLUTION:
(71-25-A)

WHEREAS, Sommerfeld & Sass, for Fulton-Gold Corporation, owner, filed, January 17, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 81-83 Fulton street, 53-57 Gold street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 10, 1924, reads:

"1. Replace the missing and defective shutters with proper iron or kalameined shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at center wall facing 85 Fulton Street west wall center and on Ann Street sides of building, or other approved protection, as per Sec. 375, Art. 18, Ch. 5 of the Code of Ordinances."

WHEREAS, the building is fireproof, 12 stories in height, with a frontage of 60 ft. 11 in. on Ann street and 43 ft. 3 in. on Fulton street; OCCUPIED as an office building; there are windows in the front wall in the Ann street elevation, which are within 30 ft. of windows in the other building on Ann street, the width of Ann street being 22 ft. 6 in.; there are windows in the westerly court which are within 30 ft. of the windows in the rear of No. 85 Fulton street;

WHEREAS, appellant contends that the windows marked "A" on plan open into a public hall which has tile floors and is entirely fireproof and that the windows which constitute direct exposure are fireproof windows, that the windows on the Ann street front are opposite fireproof windows in building across the street; that the windows marked "B" will be provided with fireproof shutters.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that existing hardwood sash of all windows on the interior court shall be glazed with wire glass.

APPELLANT—Croker National Fire Prevention Engineering Co., for Nathan Siegel, owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—20-22 Bogart street and 2-8 Rock street, Brooklyn.

APPEARANCES—
For Appellant: Herman E. Horwood.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Holland 1

THE RESOLUTION:

(1300-24-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Nathan Siegel, owner, filed, November 5, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 20-22 Bogart street and 2-8 Rock street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, served October 28, 1924, reads:

"Order No. 64950-F:

"1. Provide iron or kalameined shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at south side of building, or other approved protection, as per Sec. 375, Article 18, Chapter 5 of the Code of Ordinances."

and

WHEREAS, the building is non-fireproof, five stories in height, 55 ft. 6 in. by 101 ft. in area; OCCUPIED as a tenant factory, 205 persons above the 1st story; and

WHEREAS, there are ten windows in the south wall in each story above the 1st story within 30 ft. of openings in and not more than 50 ft. above the roof of a neighboring two-story frame dwelling to the south; and

WHEREAS, appellant contends that the premises are protected with a sprinkler system, a line of which runs parallel with the south wall and approximately 4 ft. away from the windows in question.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, only so far as it affects the six windows in the southerly gable wall (the six windows easterly from the Bogart street front), on condition that an approved two-source sprinkler system shall be maintained throughout the premises; and granted so long as conditions as to occupancy and use remain otherwise unchanged.

61-23-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Art. Ivory Manufacturing Co., Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—1078 Willoughby avenue, Brooklyn.

APPEARANCES—
For Appellant: Herman E. Horwood.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Holland 1

THE RESOLUTION:

(61-23-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Art. Ivory Manufacturing Co., Inc., lessee, filed, January 17, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 1078 Willoughby avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated January 4, 1923, reads:

"1. Surrender to the bearer, Permit No. 74336, issued June 24, 1922, to expire Feb. 5, 1923, authorizing the storage of five thousand pounds of nitro-cellulose, 275 pounds dip, at the above premises * * *.

"No permit for the storage of nitro-cellulose products, except in quantities less than 100 lbs. for purposes of manufacture of articles therefrom, shall be issued for any building which is situated within 50 ft. of the nearest wall of any building occupied as a school, theatre or other place of Public Amusement or Assembly.

MINUTES

"2. You are therefore ordered forthwith to reduce the quantity of nitro-cellulose in the form of blocks, slabs, sheets, rods, tubes and other shapes, to less than 100 lbs.";

and

WHEREAS, the building is fireproof, three stories in height, 30 ft. by 80 ft. in area; OCCUPIED for the manufacture of celluloid articles, with a total of 106 persons in the entire building; the building being equipped with a sprinkler system, and the celluloid is stored in a fireproof vault in the basement; and

WHEREAS, on March 6, 1923, the board granted a modification of these orders on condition that the storage of raw celluloid be confined to a fireproof vault in the basement, the enclosing walls of which shall be increased from 12 in. to 18 in. in thickness; that the opening to the vault be protected with double self-closing fireproof doors; that the vault be equipped with not less than twelve sprinkler heads; and granted so long as conditions remain substantially unchanged, but for a period not extending beyond May 1, 1925, and this case was reopened by vote of the board on March 24, 1925; and

WHEREAS, appellant contends inability to obtain a suitable location to move to, and proposes to remove the vault to a position further away from the church wall, and proposes also to provide fireproof windows for all openings within 50 ft. of the church walls.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that all celluloid shall be stored in a brick vault, the walls of which shall be not less than 18 in. thick, located in the basement, not less than 42 ft. from the adjoining building immediately in the rear; that the conduct and occupancy of the premises shall comply with the ordinance and the rules of the fire department for the operation and use of celluloid occupancy; that all openings in the rear, and gable wall, west of the vault, shall be equipped with fireproof windows, glazed with wire glass; and that all jig saws throughout the premises shall be provided with a water supply, equipped with a quick-opening valve.

Affirmative: Messrs. Kennedy, Dowd and Gun-
nison 3
Negative: Chairman Walsh, Messrs. Connell and
Fire Chief Kenlon 3
Absent: Mr. Holland 1

THE RESOLUTION:

(972-24-BZ)

WHEREAS, Euell & Euell, for Edw. R. and Edw. L. Finch, owners, filed, July 25, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1273 (Topographical Dept. No. 1251-59) Cromwell avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 31, 1925, after due notice by publication in the Bulletin of the board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Cromwell avenue, West 169th street and Boscobel avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered July 16, 1924, in acting on N. B. Application No. 2124-24, reads:

"1. Erection of a garage for more than five cars in a business district is contrary to the limitations of the Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 115.83 ft. and a depth of 110 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, this application was denied by the board at its meeting, November 12, 1924, and reopened February 17, 1925, on basis of new facts to be presented; and

WHEREAS, this application was brought under section 7-g and section 21 of the building zone resolution; the applicant had on file on the date of hearing but 68 per cent of the 80 per cent of consents of the property frontage deemed affected and required for the consideration of the application under section 7-g; there were no facts or adduced testimony to show that he would suffer practical difficulty or unnecessary hardship if he were restricted to the business use for which his property is designated on the zone maps as established by the board of estimate and apportionment; and

WHEREAS, the property under appeal is in the block bounded by Boscobel avenue, 169th street and Cromwell avenue, uninvaded by non-conforming use, and the board deems that granting a variation to permit the proposed use would not be in harmony with the general intent of the zoning resolution, to the end that the public health, safety and general welfare may be secured and substantial justice done.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

Adjourned 6.10 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

RULES

SMOKING IN FACTORIES.

Adopted by the Board of Standards and Appeals,
August 13, 1918.

RULE 1. PERMIT.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the fire commissioner. It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stairhall or room throughout the building, as well as in every elevator-car, in English, and also in such other language or languages as the fire commissioner shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the fire commissioner.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which, the hours between which, and the place or places in such factory where smoking may be permitted, and this permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit, in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the fire commissioner, and he shall not again issue a permit for the same premises until at least one year has elapsed.

RULE 2. PERMISSIBLE CASES.

Smoking may be permitted in:—

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

RULES

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and, further, unless the building is of fireproof construction or equipped with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the fire commissioner may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;

Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries,
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the fire commissioner may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday May 8, 1925, at 10 a. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. *When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.*

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, *except when tanks of unlimited capacities are supported on structures altogether independent of buildings.*

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

PUBLIC HEARING

The filling pipe shall be carried up inside a frost-proof riser and may extend through tank bottom to discharge top of tank above full water level. The portion of pipe side tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed lines from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank be of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting structures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and stand hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a

by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall

PUBLIC HEARING

be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($\frac{1}{2}$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building

line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached and when necessary arranged to drain to a sewer. A drip connection may be tapped into the body of check valve or when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed by two ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank and pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth so plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each 62 cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require

PUBLIC HEARING

special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing. Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at

least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

- (a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.
- (b) For Conran* one (1) inch heads, 5 feet.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.
- (b) For Conran* one (1) inch heads, 5 feet.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

Size of Pipe		Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1	"	2 heads
$1\frac{1}{4}$	"	3 "
$1\frac{1}{2}$	"	5 "
2	"	10 "
$2\frac{1}{2}$	"	20 "
3	"	36 "
$3\frac{1}{2}$	"	55 "
4	"	80 "
5	"	140 "
6	"	200 "
7	"	300 "
8	"	420 "

- (b) For Conran* one (1) inch heads—

Size of Pipe		Maximum No. of Heads Allowed
1	inch	1 head
$1\frac{1}{4}$	"	2 heads
$1\frac{1}{2}$	"	3 "
2	"	4 "
$2\frac{1}{2}$	"	6 "
3	"	9 "
4	"	18 "
5	"	34 "
6	"	51 "
7	"	75 "
8	"	105 "

- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe		Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$	"	2 heads
2	"	3 "
$2\frac{1}{2}$	"	4 "
3	"	6 "
4	"	12 "
5	"	21 "
6	"	40 "
7	"	60 "
8	"	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads

PUBLIC HEARING

said riser in one story, according to the schedule of pipes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, 48.
- (b) For Conran* one (1) inch heads, 12.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser at any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of ar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through ciner concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the building are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;

PUBLIC HEARING

At the pressure tank;
At the air compressor;
Above the alarm valve;
Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] *non-corrosive* material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] *non-corrosive* material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] *non-corrosive* material.

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

(a) For standard one-half ($\frac{1}{2}$) inch heads400

(b) For Conran* one (1) inch heads100

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

(a) For Standard one-half ($\frac{1}{2}$) inch heads800

(b) For Conran* one (1) inch heads200

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

(a) For Standard one-half ($\frac{1}{2}$) inch heads500

(b) For Conran* one (1) inch heads125

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy

PUBLIC HEARING

or rises above eighty (80) pounds per square inch an indicator or alarm located in the engineer's room or the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler systems subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof and properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed systems shall be of standard full-weight wrought iron steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

Rule 33. Approval of Sprinkler System [Tests]. Before installation all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally maintained and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a relief pump, the main controlling gate being meanwhile closed. Brine or other corrosive chemicals shall not be used for testing systems.

In the case of automatic dry-pipe systems with "Type A" valve containing an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation to at least fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. Non-fireproof Business Buildings. Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. Dangerous or Hazardous Buildings. Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. Factories and other Buildings. Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. Theatre Buildings. Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. Firework Storage. Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. Nitro-Cellulose Products. Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. Inflammable Motion-Picture Films. Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. Existing Installations and Approvals. Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. Communicating Openings. When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. Maintenance Inspections. Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. Open Sprinklers. When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

CONTENTS

This issue of the Bulletin contains, in the order

Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Minutes of Special Meeting, Board of Appeals, April
17, 1925.
Minutes of Meeting, Board of Appeals, April 21,
1925.
Minutes of Meeting, Board of Standards and Ap-
peals, April 21, 1925.
Notice of Public Hearing.
First Quarterly Report.
Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.

Special meetings as listed in this Calendar.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

Board of Standards and Appeals, as listed in the Cal-
endar.

All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013, on Tuesday, April 28,
1925, at 2 o'clock. At this call each case is set for hearing
on a definite day.

The next subsequent Call of the Calendar will be on
Tuesday, May 5, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in
connection with which court proceedings are pending or in
progress, nor accepted that are not filed within twenty
days from the date of the action of the Administrative Of-
ficial.

Any communication purporting to be an appeal, applica-
tion or petition shall be regarded as a mere notice of in-
tention to seek relief until it is filed on the form required
by the rules of this board.

Upon receipt of any such communication the writer will
be supplied with the official forms for presenting his ap-
peal, application or petition, and if he fails to supply the
data required thereon, within twenty days, his case may be
dismissed for lack of prosecution.

At the time of filing an application, the appellant or peti-
tioner shall forward a signed notice of appeal addressed
to the administrative official (either superintendent of build-
ings or fire commissioner) and file with this board a dupli-
cate of said notice.

Petitioners are advised that their plans must indicate the
points of the compass so as to establish the true location and
position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and
expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALENDAR

AL. NO. 378-24-BZ—Application, March 11, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Hesu Realty Co., Inc., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1101-1109 Union avenue, The Bronx.

CAL. NO. 1367-23 BZ—Application, December 23, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of B. R. Construction Co., owner, previously denied, to permit in a "B" area district the erection and maintenance of a building occupying more than 40 per cent of the rear yard area; premises 1211-1263 Boynton avenue, The Bronx.
WILLIAM E. WALSH, *Chairman*.

MINUTES

BOARD OF APPEALS

SPECIAL MEETING.

FRIDAY MORNING, APRIL 17, 1925.

Present: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon.

APPEAL FROM ADMINISTRATIVE ORDER.

1002-24-A.

APPELLANT—Campbell & Boland, for the New York Statler Co., lessee.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—401-417 Seventh avenue, Manhattan.

APPEARANCES—

For Appellant: Frank A. K. Boland, E. J. Mitchell and George F. Morse.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon

Negative

Absent: Mr. Kennedy

THE RESOLUTION:

(1002-24-A)

WHEREAS, Campbell & Boland, substituted for McKim, Mead & White, for New York Statler Co., lessee, filed, August 5, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 401-417 Seventh avenue, Manhattan; and

WHEREAS, the decision of the fire commissioner, N. B. Application No. 1091-16, dated June 27, 1924, reads:

"1. Outlets must be located within the stairway enclosure.

"2. Hose must be 2½ in. unlined linen Underwriters or equal."

and

WHEREAS, this case was denied by the board at its meeting held on October 21, 1924, and reopened by vote of the board on January 20, 1925; and

WHEREAS, appellant contends that the building is equipped with special fire alarm boxes with direct telegraphic communication with fire headquarters; interior automatic fire alarm; an approved sprinkler system in the (sub-basement) engine room and laundry, the 2nd basement, about 50 per cent of the basement, the baggage room, the 20th floor (carpenter's, upholsterer's room, etc.) and the paper chute; that there are provided also ten fire extinguishers on each story; that the hose outlets are plainly marked "Fire Hose" and are readily accessible, and further contends that the 1½ in. hose was permitted by the board of review of the fire department.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 1, on condition that a sign be placed within the stair hall enclosure, painted in red letters not

less than 6 in. high, and with arrow pointing the direction, indicating in feet and inches the exact location of the adjacent hose rack outlets; and granted, as to Item 2, on condition that 2½ in. hose be provided on all stand-pipe outlets; work to be completed within six months from the date of this action.

BUILDING ZONE CASES.

1369-24-BZ.

APPLICANT—Edward P. Doyle, for Ida Van Rooyan, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the change of occupancy from a garage for the storage of five (5) motor vehicles to a garage for the storage of more than five (5) motor vehicles.

812-24-BZ.

APPLICANT—John J. Dunnigan, for Sadie Corn, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the alteration and extension of a business building which was erected under a previous resolution of the board.

PREMISES AFFECTED—University avenue, west side 360.16 ft. south of 190th street, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon

Negative: Chairman Walsh

Absent: Mr. Kennedy

THE RESOLUTION:

(812-24-BZ)

WHEREAS, John J. Dunnigan, for Sadie Corn, owner, filed, June 17, 1924, an application, under the building zone resolution, to permit in a residence district the alteration and extension of a business building which was erected under a previous resolution of the board; premises west side of University avenue, 360.16 ft. south of 190th street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that University avenue, West 188th street and Parkview place are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered June 9, 1924, in acting on Alt. Application No. 307-24, reads:

"1. Proposed alteration and extension of building in residence district for business purposes is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed extension is to be of non-fireproof construction, one story in height, with a width at rear of 50 ft. and a depth of 95 ft. 9¼ in. and 74 ft., irregular in area; to be occupied as stores in conjunction with those on the front of the lot; and

WHEREAS, there was no opposition to the granting of the application on the part of owners of adjacent property, and the extension of stores to the rear of the lot line as proposed, owing to the difference in grade of street frontages involved, would not in any way affect property to the rear of the proposed site.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the proposed extension shall not exceed one story in height; that the rear and gable walls shall be unpierced throughout their entire height and length; that any skylights installed shall be glazed with plain glass, protected above and below with wire guards; that the use and occupancy shall be restricted to retail merchandising, but the merchandising and storage of food products shall be prohibited;

MINUTES

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within twelve months from the date of this action.

1197-23-BZ.

APPLICANT—John J. Dunnigan, for Vivaudou Realty Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—712-748 Southern boulevard, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Mr. Dowd and Fire Chief Kenlon 2

Negative: Chairman Walsh, Messrs. Gunnison,

Holland and Connell 4

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1197-23-BZ)

WHEREAS, John J. Dunnigan, for Vivaudou Realty Co., owner, filed, October 19, 1923, an application, under the building zone resolution, to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five motor vehicles; premises 712-748 Southern boulevard, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, December 14, 1923, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Southern boulevard is a business district and Whitlock avenue is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered October 16, 1923, in acting on N. B. App. No. 2463-23, reads:

"Erection of proposed garage in unrestricted district extending into business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 373.70 ft. and a depth of 200 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, under the provisions of section 7, subdivision C, the board is empowered to act, and there existed on these premises on July 25, 1916, a stable for more than five horses; and

WHEREAS, this application was granted by the board at its meeting, December 14, 1923, on conditions stated and reopened by vote of the board on December 23, 1924, and applicant now proposes to provide an additional entrance on Southern boulevard front, making two entrances instead of one as stipulated in resolution; and

WHEREAS, the original resolution adopted in this case was on condition that there be but one vehicular entrance to each subdivision of the structure, and the board deemed that the original resolution should be complied with in all respects and the requested modification denied.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be limited to one story in height; that the floor area be subdivided in accordance with dimensions stipulated on plans filed in this appeal into three sections; that the walls dividing this structure be erected of brick 12 in. in thickness,

unpierced as indicated on plans; that the entire front on Southern boulevard be maintained for the conduct and use as shops or stores separated from garage portion by unpierced fireproof partitions of 4 in. terra cotta blocks; that not more than one vehicular entrance be permitted on Southern boulevard front to each section of garage by means of an unpierced fireproof passage or runway; the gable walls shall be unpierced throughout their entire height and length; that the front elevations be finished in face brick with architectural terra cotta or stone trimmings; any skylights installed shall be glazed with plain glass and protected above and below with wire guards;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1461-24-BZ.

APPLICANT—John J. Dunnigan, for Louis Koenig, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—North side of East 170th street, 100 ft. west of Fulton avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd,

Gunnison, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1461-24-BZ)

WHEREAS, John J. Dunnigan, for Louis Koenig, owner, filed, December 11, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business and also into a residence district, of a proposed garage for the storage of more than five motor vehicles; premises north side of 170th street, 100 ft. west of Fulton avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 170th street is unrestricted westerly from a point 100 ft. west of Fulton avenue, and business easterly from said point; Fulton avenue is a residence district and St. Paul's place is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 26, 1924, in acting on N. B. Application No. 1623-24, reads:

"1. Proposed garage partly in an unrestricted district extending into a business and residential district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 180 ft. 8½ in. and a depth of 189 ft. 6 in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the entire plot under appeal, excepting a portion approximately 44 ft. in depth at the rear, is all in the unrestricted district, the board deemed the granting of the requested variation to be in harmony with the general purpose and intent of the zoning resolution and in accord-

MINUTES

ance with the provisions of exception specifically stated under section 7-c, and it would be a hardship to deprive applicant of the proposed use on his entire plot.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be erected fireproof and limited to one story in height above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that no skylights shall be installed within 20 ft. of the rear or gable walls, and any skylight installed shall be glazed with plain glass protected with wire guards above and below; that any gasoline storage equipment installed shall be located at the street wall of the 170th street front, at the westerly end; that there shall be no roof signs erected on the premises; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1434-24-BZ.

APPLICANT—John J. Dunnigan, on behalf of Otto J. Schwartzler, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1728-1750 Morris avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Messrs. Dowd, Gunnison and Holland	3
Negative: Chairman Walsh, Mr. Connell and Fire Chief Kenlon	3
Absent: Mr. Kennedy	1

THE RESOLUTION:

(1434-24-BZ)

WHEREAS, John J. Dunnigan, for Otto J. Schwartzler, owner, filed, December 4, 1924, an application, under the building zone resolution, to permit in a business district the alteration and extension of an existing garage for the storage of more than five (5) motor vehicles; premises 1728-1750 Morris avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Morris avenue and East 174th street are business districts and Grand boulevard is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 3, 1924, in acting on Alt. Application No. 208-24, reads:

"1. Proposed extension in height to garage for more than five motor vehicles in business district is contrary to the provisions of the Building Zone Resolution.";

and

WHEREAS, the original garage, granted under section 7E (Cal. No. 153-21-BZ), is fireproof, one and four stories in height, 300 ft. by 85 ft. in area; under Cal. No. 656-24-BZ, it was permitted to add four stories to the four-story section and also two stories to the one-story section of the original garage; the permitted additional two stories above the one-story section (200 ft. by 85 ft. in area) was not constructed; it is now proposed to increase the permitted height (three stories) one more story, making the original one-story section of the garage four (4) stories in height; and

WHEREAS, the board originally granted an application for a garage on the premises under appeal and thereafter modified the original resolution allowing additional stories to be added on the conditions stated in the resolution, the board deemed that the conditions heretofore imposed should be complied with and this further modification permitting another story in addition to those granted by the first modification unwarranted, as the additional story would be on the grade of Grand Concourse, thereby opening to the existing structure facing on the Concourse and thereby available to operation in conjunction with the existing extensive garage building 196.40 by 85 ft. irregular, and eight stories in height, this additional garage building in rear 200 ft. by 85 ft. and three stories in height.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1007-24-BZ.

APPLICANT—R. Thomas Short, for Homack Construction Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district extending from a business district, the erection and maintenance of a building to be used for theatre and store purposes.

PREMISES AFFECTED—South side East Roosevelt avenue, 110 ft. west of Alburtis avenue, Corona, Borough of Queens.

APPEARANCES—

For Applicant: James J. Walker.

For Opposition: J. L. O'Brien, Mr. McWilliams.

ACTION OF BOARD—Application denied.

THE VOTE TO ADOPT REPORT OF COMMITTEE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Messrs. Holland and Connell	3
Negative: Messrs. Dowd, Gunnison and Fire Chief Kenlon	3
Absent: Mr. Kennedy	1

THE RESOLUTION:

(1007-24-BZ)

WHEREAS, R. Thomas Short, for Homack Construction Company, owner, filed, August 6, 1924, an application, under the building zone resolution, to permit the extension, from a business district into a residence district, of a proposed building to be used for theatre and store purposes; premises south side East Roosevelt avenue, 100 ft. west of Alburtis avenue, Corona, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Roosevelt avenue, East Roosevelt avenue (Grand) are business districts and Lake street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 12, 1924, in acting on N. B. Application No. 2671-24, reads:

"Erection of a theatre and business building extending into a residence district is prohibited by the Zone Law.";

and

WHEREAS, the proposed building is to be of fireproof construction, orchestra and balcony in height, with a frontage of 100 ft. and a depth of 140 ft.: to be occupied as a motion picture theatre seating 1,452 persons in the orchestra and 548 persons in the balcony; and

WHEREAS, there was vigorous opposition to the granting of this application and there was a difference of opinion by the members of the board as to whether or

MINUTES

not the board had the power to grant the last 15 ft. of the proposed extension and as to whether or not refusal to permit the use of said 15 ft. for the proposed non-conforming use constituted an unnecessary hardship as defined by section 21 of the building zone resolution.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1506-24-BZ.
APPLICANT—Edward P. Doyle, for Vincent C. Pepe, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—59-61 Carmine street, Manhattan.

APPEARANCES—

For Applicant: Edward P. Doyle.

For Opposition: Michael J. Horan, C. C. Smith, N. Satriani, Luke Higgins, Frank Hitschick, S. J. Peireno, C. H. Goodman.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(1506-24-BZ)

WHEREAS, Edward P. Doyle, for Vincent C. Pepe, owner, filed, December 22, 1924, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises 59-61 Carmine street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Seventh avenue is an unrestricted district and Carmine street is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 18, 1924, in acting on N. B. Application No. 673-24, reads:

"1. Proposed garage is contrary to Art. II, Section 4, of the Zone Resolution."

and

WHEREAS, the building is of non-fireproof construction, two stories and basement in height, with a frontage of 50 ft. on Carmine street, 68 ft. 1¼ in. on Seventh avenue and a depth of 149 ft. 7½ in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, all the property under appeal, excepting for a depth of 2 ft. on the southerly line of plot and 49 ft. on the northerly line of plot, is within an unrestricted district, the board deemed it would be an unnecessary hardship to deprive applicant of the proposed use on the remaining triangular piece of the property in the business district.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be limited in height to a two-story structure above the curb level; that the gable walls be unpierced throughout their entire height and length; that the Carmine street front shall be finished in tapestry brick with natural stone trimmings; that there shall be no vehicular entrance permitted on Carmine street, and any openings on the Carmine street elevation shall be restricted to windows, with the exception of one emergency exit doorway not exceeding a width of 3 ft. 6 in., located in the center of the facade at street level; that there shall be no advertising signs of any nature or description permitted on the Carmine street front of the premises and no roof signs shall be permitted; that any gasoline storage equipment installed shall be located at the Seventh avenue front of the structure; that the architect shall make a return of the proposed design in accordance with the conditions of this resolution for approval by this board, before submitting same for the consideration of the superintendent of buildings;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

Adjourned 2.05 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

MINUTES

BOARD OF APPEALS

REGULAR MEETING.

TUESDAY MORNING, APRIL 21, 1925.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon.

The minutes of the regular meeting of the board of appeals, held on Tuesday morning, April 14, 1925, and the minutes of the special meeting of the board of appeals, held on Tuesday afternoon, April 14, 1925, were approved as printed in the Bulletin, No. 16, Vol. X.

APPEALS FROM ADMINISTRATIVE ORDERS.

Absent: Mr. Dowd and Fire Chief Kenlon 2

THE RESOLUTION:

(136-25-A)

WHEREAS, Cornell Utilities Company, Inc., for Dr. S. A. Nutt, owner, filed, January 31, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises on the northwest corner of Woodhaven avenue and Ridgewood avenue, Woodhaven, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, rendered December 29, 1924, reads:

"Alt. Application No. 2646-24:

"(3) Note on tank drawing, tank will be tested in presence of a Fire Department Representative and afterwards coated with a suitable rust resisting material.

"(6) Note on plan: 'Piping will be tested in presence of a Fire Department Representative.'

"(9) Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the building is non-fireproof, 2½ stories in height, 31 ft. by 37 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed

consisting of a 550-gallon fuel oil tank, a 55-gallon auxiliary tank, a NoKol burner, and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the tank was installed according to the rules of 1922, and requests the acceptance of an affidavit to the effect that the tank has undergone a shop test.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 3, on condition that certificate of factory test shall be filed with the fire commissioner; as to Item 6, on condition that standard wrought iron piping shall be used throughout the installation; and, as to Item 9, on condition that door of fire-box of boiler shall be equipped with a self-closing device; and that the installation shall otherwise comply with the fuel oil rules in all respects.

39-25-A.
APPELLANT—Samuel Rosenblum, for India Wharf
Brewing Co., owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—48-56 Hamilton avenue,
Brooklyn.

APPEARANCES—
For Appellant: Samuel Rosenblum.
For Administration: Inspector Maher of fire
department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Ken-
nedy, Gunnison, Holland and Connell... 5
Negative 0
Absent: Mr. Dowd and Fire Chief Kenlon 2

THE RESOLUTION:
(139-25-A)

WHEREAS, Samuel Rosenblum, for India Wharf Brewing
Co., owner, filed, January 31, 1925, an appeal, with the board
of appeals, from an order of the fire commissioner, affect-
ing premises 48-56 Hamilton avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated Janu-
ary 12, 1925, reads:

"1. Install a standpipe system with risers 4 inches
in diameter tested to withstand a pressure of 300 lbs.
per square inch, extending from cellar to roof, with
necessary check valves and 2½ inch regulation Fire
Department outlets on each story (including basements,
cellars and roofs), placed within main stairway enclo-
sure. Each outlet to be provided with sufficient feet
of 2½ inch standard hose attached thereto.";

and
WHEREAS, the premises consist of a nine-story (96 ft.
high) non-fireproof building, separated into two sections by
a fore and aft partition wall with openings therein on each
story; one section being 123 ft. 6 in. by 51 ft. 6 in. in
area and the other section being 83 ft. by 40 ft. in area;
total area being approximately 9,200 sq. ft.; OCCUPIED
as a storage warehouse, 10 persons in the entire premises;
and

WHEREAS, appellant contends that the openings in the par-
tition wall are protected by fireproof doors, that no inflam-
mable or hazardous materials are stored; that the premises
are protected with an automatic sprinkler system; that there
are fire alarm boxes throughout the building and telegraphic
communication to fire headquarters and that the premises
are patrolled by a watchman service.

Resolved, that the order of the fire commissioner be and
it hereby is *modified*, and the appeal be and it hereby is
granted on condition that the building shall remain as now
sub-divided; that an approved automatic dry-pipe sprinkler
system shall be maintained, together with fire alarm boxes,
telegraphic communication to headquarters, and that a watch-
man patrol service be maintained at all hours of the day
and night; and *granted* only so long as occupancy and use
remain unchanged.

Absent: Mr. Dowd and Fire Chief Kenlon 2

THE RESOLUTION:

(168-25-A)

WHEREAS, Samuel Rosenblum, for Epstein Realty Impt. Corp., owner, filed, February 9, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 57-9 Second avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 22, 1924, reads:

"1. Provide a tank on roof of at least 3,500 gallons capacity for the standpipe system, said tank to be so elevated that the bottom will be not less than 20 feet above the roof level. Sec. 20, Ch. 12, Code of Ordinances.";

and

WHEREAS, the building is fireproof, nine stories (96 ft.) in height, 48 ft. by 85 ft. (irregular) in area; OCCUPIED as an apartment house, with stores on part of the 1st story; and

WHEREAS, appellant contends that there is a separate tank for the house supply and that a 4,000-gallon tank for standpipe use was installed at the time (1903) of the erection of the building; that the bottom of the tank is approximately 6 ft. above the top story outlet, and requests the acceptance of the tank in its present location in view of the fireproof construction, and also the nature of the occupancy of the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* only so far as it affects the elevation of tank above the outlets on top story *on condition* that the standpipe installation shall comply with the rules now in force in all other respects.

176-25-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Edgar S. & John S. Appleby, owners.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—642 West 57th street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Dowd 1

THE RESOLUTION:

(176-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for Edgar S. & John S. Appleby, owners, filed, February 13, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 642 West 57th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 8, 1925, reads:

"Order No. 27388-LC:

"1. Install standpipe 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs) placed within main stairway enclosure. Each outlet to be provided with 100 feet of 2½ inch standard hose

MINUTES

attached thereto. Such standpipe shall be kept constantly filled with water by means of an approved tank or pump supply and be ready for use at all times.”; and

WHEREAS, the building is fireproof, one story in height, 150 ft. by 3,139 ft. 11 in. (approximately 20,000 sq. ft.); OCCUPIED as a service station for motor vehicle company, 60 persons in the entire premises; and

WHEREAS, appellant contends that there is an open alleyway at the rear of the premises; that there are city fire hydrants within easy access of the premises; that the building is only one story in height and that fireproof partitions have been installed, reducing the open area to approximately 12,500 sq. ft.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the open garage space shall not exceed an area of 12,500 sq. ft.; and that all subdividing partitions shall be built of fireproof material, any openings therein to be equipped with self-closing fireproof doors.

APPELLANT—Harry A. Lanzner, for Ilbhal Realty Co., Inc., owner.

SUBJECT—Appeal from decision of fire commissioner. PREMISES AFFECTED—16-26 Northern avenue, Manhattan.

APPEARANCES—

For Appellant: Emanuel M. Cohen.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Dowd	1

THE RESOLUTION:

(1433-24-A)

WHEREAS, Harry A. Lanzner, for Ilbhal Realty Company, Inc., owner, filed, December 4, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 16-26 Northern avenue, Borough of Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered November 3, 1924, reads:

“Plans of fuel oil equipment as filed with this Bureau show substantial compliance with Fuel Oil Rules adopted by the Board of Standards and Appeals but standpipes are not shown to be provided in this building in accordance with Section 581, Article 28, Chapter 5 of the Code of Ordinances. You are therefore advised that a storage permit for fuel oil cannot be issued until the legal requirements for standpipes have been fully complied with.”;

and

WHEREAS, the building is non-fireproof, six stories (63 ft. 6 in.) in height, 105 ft. by 125 ft. (approximately 12,500 sq. ft.) in area; divided into five subareas by 8 in. brick walls; OCCUPIED as an apartment house, 55 families; and

WHEREAS, appellant contends that the fuel oil installation is not affected by the question as to standpipe; and

WHEREAS, appellant directs his appeal to the consideration of the fuel oil installation, irrespective of the requirements as to standpipe installation.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to issuance of permit for the use and operation of the fuel oil burning equipment, *on condition* that the installation shall comply with the fuel oil rules in all re-

spects; and that in no way shall this modification affect the jurisdiction of the fire commissioner as to requirements for standpipe installation.

1462-24-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Spear & Co., Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—186-188 Wooster street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Absent: Mr. Dowd	1

THE RESOLUTION:

(1462-24-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Spear & Co., Inc., owner, filed, December 12, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 186-8 Wooster street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 28, 1924, reads:

“Provide a separate and distinct system of Automatic Sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919.”;

and

WHEREAS, the building is non-fireproof, six stories in height, 50 ft. by 100 ft. in area on 1st story and 50 ft. by 90 ft. in area above. OCCUPIED: 1st story, paper boxes, 12 persons; 2nd story, office and stock, 2 persons; 3rd story, mfr. suit cases, 10 persons; 4th story, artificial flowers, 6 persons; 5th story, clothing manufacturing, 20 persons; 6th story, clothing manufacturing, 40 persons; and

WHEREAS, appellant contends that the premises are equipped with a fire alarm system and that fire drills are regularly conducted; that ample exits have been provided, and contends that the paper box occupancy will terminate on January 31, 1926.

Resolved, that the decision of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

1508-24-A.

APPELLANT—Forest Box & Lumber Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—420-438 Oakland street and 1-11 Paige avenue, Brooklyn.

APPEARANCES—

For Appellant: M. Lester Mendell.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Dowd	1

THE RESOLUTION:

(1508-24-A)

WHEREAS, Forest Box & Lumber Company, owner, filed, December 22, 1924, an appeal, with the board of appeals,

MINUTES

from an order of the fire commissioner, affecting premises 420-438 Oakland street and 1-11 Paige avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 4, 1924, reads:

"Order No. 68587-F:

"1. Install in each building known as No. 1-11 Paige Avenue and Planing Mill at rear, a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the premises consist of a plot of ground upon which is located the plant of the Forest Box & Lumber Company, consisting of a one-story wood and galvanized iron planing mill building, 256 ft. by 181 ft. (approximately 40,000 sq. ft.), irregular in area, also a non-fireproof building, one and two stories in height, having a frontage of 195 ft. on Paige avenue and a frontage of 208 ft. on Oakland street, separated into two sections of respectively (approximately) 20,000 and 14,000 sq. ft. by a partition wall (with openings therein protected by fire doors on each side of openings), 100 persons in entire premises; and

WHEREAS, appellant contends that the buildings in question are low in height and accessible to city fire fighting apparatus; that there are sufficient city fire hydrants and standpipes in and surrounding the plant, that there is a watchman patrol system in operation, and proposes to protect the one-story section (marked "B" on plans) by providing at the partition wall a standpipe riser, terminating in a siamese connection and two 100 ft. lengths of hose which will cover every portion of the one-story box mill building.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* so long as surrounding conditions as to height, use and occupancy remain substantially unchanged.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon 6

Negative 0

Absent: Mr. Dowd 1

THE RESOLUTION:

(1401-24-A)

WHEREAS, Michael C. D'Agrosa, for Angelina Marino, owner, filed, November 26, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 6701 Ridge boulevard, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated October 28, 1924, reads:

"Order No. 88277-LC:

"You are therefore ordered to remove all fuel oil from the storage tank and discontinue the further storage and use of fuel oil at the above location.";

and

WHEREAS, on April 16, 1925, an amendment was made reading:

"2. Note on tank drawing, tank will be tested in presence of a Fire Department Representative and afterwards coated with a suitable rust resisting material.

"3. Separate line must be used for overflow—overflow cannot be used as vent pipe.

"5. Note on plan: 'Piping will be tested in presence of a Fire Department Representative.'";

and

WHEREAS, the building is frame, 2½ stories in height, 47 ft. by 57 ft. 9½ in. in area in the 1st story and 31 ft. 4 in. by 51 ft. in area above; OCCUPIED as a private dwelling for one family; the building being equipped with a fuel oil burning installation consisting of an outside buried tank 550 gallons, an interior auxiliary tank 55 gallons, and a Richmond gravity burner approved by the board of standards and appeals; and

WHEREAS, appellant contends that the installation conforms to the rules of the board of standards and appeals.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 2, on condition that certificate of factory test shall be filed with the fire commissioner; *denied*, as to Item 3; and *granted*, as to Item 5, on condition that standard wrought iron pipe shall be used throughout the installation of the fuel oil burning equipment, and that the installation shall comply with the fuel oil rules in all other respects.

Negative 0

Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

(182-25-A)

WHEREAS, The Surface Combustion Company, for Fidelity Metal Company, owner, filed, February 13, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises east side of Ranton street, corner Newtown Creek, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered March 3, 1925, in acting on Alteration Application No. 2782-24, reads:

"1. Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the premises consist of a plot of ground upon which is located the plant of the Fidelity Metal Company, consisting of a one-story fireproof building, 97 ft. by 288 ft. in area; OCCUPIED for smelting metal; and

WHEREAS, a fuel oil burning system has been installed consisting of two 10,000-gallon fuel oil storage tanks located on concrete piers at a distance of 50 ft. from the nearest building, surface combustion burners and the necessary valves, pumps and piping to make a complete installation; and

WHEREAS, appellant requests a temporary permit pending an inspection of the burner.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted a temporary permit*, for 90 days at owner's risk, pending determination by the board of standards and appeals on petition now before them.

APPELLANT—Edward Wisely & Son, owners.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—10 Richmond avenue, Port Richmond, Borough of Richmond.

APPEARANCES—

For Appellant: James A. Wisely.

ACTION OF BOARD—Extension of permit granted for two years on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO GRANT TWO-YEAR EXTENSION OF PERMIT—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland and Connell..... 5

Negative 0

Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:

(42-23-A)

WHEREAS, Edward Wisely & Son, owner, filed, January 11, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 10 Richmond avenue, Port Richmond, Borough of Richmond; and

WHEREAS, the order of the fire commissioner reads:

"With reference to your application dated Sept. 9, 1922, for a permit to keep and store hay and straw at above location, I regret to inform you that I am without power to grant such a permit.

"Section 24, sd. 3-c, of chapter 12 of the Code of Ordinances, provides that no permit shall be issued for the storage of combustible fibres in excess of one ton, in any building or premises of wooden construction, except sparsely populated districts where it shall be in the discretion of the Commissioner.

"You are, therefore, ordered to

"1. Reduce the quantity of combustible fibres to one ton.";

and

WHEREAS, the building is frame and corrugated iron, one story in height, 45 ft. by 124 ft. in area; OCCUPIED for the storage of hay and grain; and

WHEREAS, appellant contends that he has contracts with the City of New York and the War Department for large amounts of hay and straw and claims it is important that they have on hand a large quantity of hay and straw in order to carry out their contract in case deliveries are delayed; and

WHEREAS, this appeal was granted by the board at its meeting February 27, 1923, for a temporary period of two years, and appellant requested an extension of time.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* for a temporary period of two years from the date of this action.

1211-24-A.

APPELLANT—Graff Engineering Corp., for Standard Varnish Works, owner.

SUBJECT—Application for reopening—appeal from decision of fire commissioner.

PREMISES AFFECTED—2589 Richmond terrace, Port Richmond, Borough of Richmond.

APPEARANCES—

For Appellant: W. M. Graff.

ACTION OF BOARD—Granted application for extension of temporary permit.

THE VOTE TO GRANT 90-DAY PERMIT—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell 6

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(1211-24-A)

WHEREAS, Graff Engineering Corp., for Standard Varnish

Works, owner, filed, October 10, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 2589 Richmond terrace, Port Richmond, Borough of Richmond; and

WHEREAS, the decision of the fire commissioner, Alt. App. No. 1658-24, dated October 7, 1924, reads:

"1. Storage tanks must be buried underground below the level of any piping to which they may be connected.";

and

WHEREAS, the building is non-fireproof, one story in height, 50 ft. by 61 ft. in area; OCCUPIED as a varnish cook room; and

WHEREAS, appellant contends experiments are being made on the premises relative to comparative tests of oil burning and coke burning fires; that a 1,000-gallon fuel oil tank (6 ft. by 3 ft. by 8 ft. in area), located above ground, is being used, and requests a 60-day permit in order to complete tests; and

WHEREAS, this appeal was granted by the board at its meeting December 30, 1924, for a temporary period, and appellant requests an extension of time.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* for a temporary permit for a period not exceeding ninety (90) days on condition that capacity of steel tank shall be limited to 1,000 gallons, located in open yard of premises.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Holland, Connell and Fire Chief Kenlon 5
Negative: Mr. Gunnison 1
Absent: Mr. Dowd 1

THE RESOLUTION:

(5-25-BZ)

WHEREAS, William F. Doyle, for Irville Realty Corp.,

owner, filed, January 2, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises northwest corner of Cortelyou road and Gravesend avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Gravesend avenue and Cortelyou road are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 1, 1924, in acting on Application No. 23368-24, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 4. A public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 100 ft. on Gravesend avenue and 99 ft. 8 in. on Cortelyou road; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant has filed a substantial percentage of consents and has made every reasonable effort to obtain the required consents, and the board deems that, because of surrounding conditions and the fact that the property lies between two railroad tracks, adjoining property would not be adversely affected, and denial of the application would result in substantial hardship.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the structure be limited to a one-story building in height; that the gable walls shall be unpierced throughout their entire height and length; that vehicular entrances shall be restricted to Cortelyou road; that there shall be no door openings on the Gravesend avenue front other than one emergency exit not exceeding 3 ft. 8 in. in width; that the elevation on street fronts shall be finished in face brick, with architectural terra cotta or stone trimmings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

402-24-BZ.

APPLICANT—Charles H. Mohr, for Mohr-Steiber Holding Co., Inc., owner.

SUBJECT—Application (re: decision of tenement house commissioner) to permit in a business district the maintenance of the use as iron works on the first story and in the cellar of an existing residence building.

PREMISES AFFECTED—449 West 46th street, Manhattan.

APPEARANCES—

For Applicant: None.

For Opposition: Gilman D. Blake, Rev. Thomas A. Sparks, R. H. Truax and Henry S. Lockwood.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0
Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Absent: Mr. Dowd 1

THE RESOLUTION:

(402-24-BZ)

WHEREAS, Charles H. Mohr, for Mohr-Steiber Holding Co., Inc., owner, filed, March 18, 1924, an application, under the building zone resolution, to permit in a business district

MINUTES

he maintenance of the use as iron works in the 1st story and cellar of an existing dwelling; premises 449 West 46th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 46th street and West 47th street are business districts; and

WHEREAS, the order of the tenement house department, dated August 24, 1922, reads:

"The cellar and 1st story are used for iron works. The use of cellar and 1st story for iron works purposes must be discontinued forthwith and the building restored to a use conforming to Zoning Rules and Regulations."

and

WHEREAS, the existing building is of non-fireproof construction, four stories in height, with a frontage of 25 ft. and a depth of 60 ft. Occupied: Cellar and 1st story, iron works; upper stories, dwellings; and

WHEREAS, the board deemed the application unjustified in a business district, and the maintenance of use as an iron works in the 1st story and cellar with a tenement house occupancy unwarranted in fact or circumstance.

Resolved, that the order of the tenement house department be and it hereby is affirmed, and the application be and it hereby is denied.

1421-24-BZ.

APPLICANT—David G. Ludins, for Elliot Place Holding Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a business building.

PREMISES AFFECTED—Southeast corner of Jerome avenue and Elliot place, The Bronx.

APPEARANCES—

For Applicant: David G. Ludins and Leo Ludins.

For Opposition: Louis Fein.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Absent: Mr. Dowd	1

THE RESOLUTION:

(1421-24-BZ)

WHEREAS, David Ludins, for Elliot Place Holding Co., owner, filed, December 2, 1924, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the erection and maintenance of a business building; premises southeast corner of Jerome avenue and Elliot place, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is a business district and Elliot place is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 18, 1924, in acting on N. B. Application No. 2853-24, reads:

"Erection of proposed building for business uses in business district extending into residence district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 106 ft. 9 in. and a depth of 112 ft. 7 in.; a portion 12 ft. 7 in. in width extending into the residence district; the building to be occupied for business purposes; and

WHEREAS, the application for variation merely requested permission to maintain a business building, the testimony adduced at the hearing disclosed the intention to use part of the premises for garage storage with a driveway to same, which the board deemed unwarranted.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

1539-24-BZ.

APPLICANT—Charles A. Anderson, for George V. Fink, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence and "E" area district the erection and maintenance of a building nearer than ten (10) feet from the street line, contrary to section 15, subdivision (d) of the building zone resolution.

PREMISES AFFECTED—1977 East 22nd street, Brooklyn.

APPEARANCES—

For Applicant: Charles A. Anderson and Louis F. Fink.

For Opposition: J. George Silverstein, Mr. and Mrs. J. F. Jacobs, H. P. Beer, A. E. Long and T. H. Grossmith.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Absent: Mr. Dowd	1

THE RESOLUTION:

(1539-24-BZ)

WHEREAS, George Anderson, for George V. and L. F. Fink, owners, filed, December 31, 1924, an application, under the building zone resolution, to permit in a residence and also "E" area district, the erection and maintenance of a building less than ten (10) feet from the building line, in violation of art. 1, sec. 4, of building code; premises 1977 East 22nd street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 22nd street is a residence and "E" area district; and

WHEREAS, the order of the superintendent of buildings, dated December 6, 1924, reads:

"Plan shows front line of structure 25 ft. from curb line. Said structure is about 20 ft. from curb line, not as plan. In violation of art. 1, sec. 4, of the Building Code."

and

WHEREAS, the building is of frame construction, two stories in height, with a frontage of 22 ft. and a depth of 58 ft.; to be occupied as a dwelling, the front wall of main building being placed on set back line but the porch projecting beyond this line to within 2 ft. of the building line; and

WHEREAS, it appeared from statements made by affected property owners at the hearing that other buildings on the street front came out beyond the 10-foot set-back, the board deemed it an equitable adjustment to afford the applicant some consideration, and a permit was issued for the structure by the bureau of buildings.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the face of building on the street front be maintained not less than 10 ft. back from the building line, and any porch projection beyond that shall be maintained open.

52-25-BZ.

APPLICANT—Samuel Rosenblum, for Richard Weber, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—266-278 Park circle, Brooklyn.

APPEARANCES—

For Applicant: Samuel Rosenblum.

For Opposition: John F. Cunningham, Louis H. Hahlo and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon 6

Absent: Mr. Dowd 1

THE RESOLUTION:

(52-25-BZ)

WHEREAS, Samuel Rosenblum, for Richard Weber, owner, filed, January 12, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 266-278 Park circle, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Park circle, Ocean parkway and Sherman street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 16, 1924, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 3. The erection of a public garage for more than five motor vehicles in a residence district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 111 ft. and a depth of 124 ft., irregular; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there was vigorous objection to the granting of this application on the part of affected property owners, and the board deemed that applicant submitted no testimony or facts in substantiation of his basis of appeal, namely, unnecessary hardship, under section 21 of the zoning resolution.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1480-24-BZ.

APPLICANT—Emil Guterman, for Paola Gerardi, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—105-107 Jackson street, Brooklyn.

APPEARANCES—

For Applicant: Emil Guterman.

For Opposition: Michael Potanz.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chife Kenlon 6

Absent: Mr. Dowd 1

THE RESOLUTION:

(1480-24-BZ)

WHEREAS, Emil Guterman, for Paola Gerardi, owner, filed December 16, 1924, an application, under the building zone resolution, to permit in a business district the alteration and extension of a garage for the storage of more than five motor vehicles; premises 105-107 Jackson street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jackson street, Leonard street and Manhattan avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 1, 1924, reads:

"1. Application contrary to Art. II, Sect. 4. Proposed extension to a public garage for more than five cars in a business district.";

and

WHEREAS, at present there is a one-story non-fireproof five-car garage, 25 ft. by 100 ft. in area on the premises, and adjoining to the westerly rear there is another one-story non-fireproof five-car garage, 21 ft. by 41 ft. in area; it is proposed to remove the partition wall separating these two garages and to building a non-fireproof one-story addition, 24 ft. by 25 ft. in area, to the south of the existing westerly garage and to use the whole as a garage for the storage of more than five motor vehicles; and

WHEREAS, notwithstanding that applicant has filed 80 per cent of consents, the board deemed that surrounding conditions did not warrant a variation of the zone law to extend the existing five-car garage and erect a public garage.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1252-24-BZ.

APPLICANT—Morris Perlstein, for Ritebuilt Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—Northwest corner of Forest avenue and Linden street, Ridgewood, Borough of Queens.

Absent: Mr. Dowd and Fire Chief Kenlon.. 2

THE RESOLUTION:

(1252-24-BZ)

WHEREAS, Morris Perlstein, for Ritebuilt Realty Corp., owner, filed, October 22, 1924, an application, under the building zone resolution, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises northwest corner of Linden street and Forest avenue, Ridgewood, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

MINUTES

WHEREAS, the use district maps accompanying the building zone resolution show that Linden avenue, Forest avenue and Grandview avenue are business districts and Grove street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered October 11, 1924, in acting on N. B. Application No. 15925-24, reads:

"1. The erection of a public garage in a business district is prohibited by the Zone Law."

and
WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 118 ft. 8 in. on Forest avenue, 139 ft. 8 in. on Linden avenue and a depth of 200 ft. 2 in.; and

WHEREAS, there was vigorous opposition to the granting of this application, and the board deemed that applicant did not substantiate his basis of appeal, and that denial of the application would not work an unnecessary hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

1268-24-BZ.

APPLICANT—Charles B. Meyers, for William H. Search, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the conversion of occupancy from storage purposes to a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—142-156 East 31st street, Manhattan.

APPEARANCES—

For Applicant: Charles B. Meyers.

For Opposition: C. E. Heydt, Mrs. Mary Neilson and Max A. Goldhill.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland and Connell... 5

Negative 0

Absent: Mr. Dowd and Fire Chief Kenlon.. 2

THE RESOLUTION:

(1268-24-BZ)

WHEREAS, Charles B. Meyers, for William H. Search, owner, filed, October 25, 1924, an application, under the building zone resolution, to permit in a business district the conversion of occupancy of a building used as a public warehouse to that of a garage for the storage of more than five motor vehicles; premises 142-156 East 31st street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 31st street, East 30th street and Third avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered September 12, 1924, in acting on Alt. Application No. 2068-24, reads:

"1. Conversion of a building within a business district from storage to public garage is unlawful."

and
WHEREAS, the existing building is of fireproof construction, six stories in height, with a frontage of 146 ft. and a depth of 98 ft. 9 in.; occupied as a warehouse; it is proposed to convert the structure to a garage for more than five motor vehicles; and

WHEREAS, this building had previously been used as a public garage and was taken by the government for storage purposes during the war, and the application now is

for the restoration of a use to which applicant had a right under a permit previously issued by official having competent jurisdiction.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that any openings in the gable walls be equipped with fixed fireproof sash and frames, glazed with wire glass; that the existing openings in the rear wall shall be equipped with fireproof frames and sash, glazed with translucent wire glass; that the rear yard as in existence be retained; that the building shall not be increased in height, area or dimensions; that any gasoline storage equipment installed shall be located at the front of building inside the street wall; that no roof signs shall be erected or maintained; that there shall be no advertising display other than one projecting sign on the street front, indicating the title of the garage; and that all necessary permits shall be obtained within sixty days from the date of this action.

559-24-BZ.

APPLICANT—William F. Doyle, for Achilles Realty Corp., owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—237-243 East 55th street, Manhattan.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: None.

ACTION OF BOARD—Granted extension of time to obtain permits, time running from date of this action, on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO EXTEND TIME TO OBTAIN PERMITS—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell 6

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(559-24-BZ)

WHEREAS, William F. Doyle, for Achilles Realty Corp., owner, filed, April 21, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 237-43 East 55th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 22, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 55th street, Second avenue and Third avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered April 15, 1924, in acting on N. B. Application No. 189-24, reads:

"1. Garage for more than 5 cars is unlawful in a business district. Zone Resolution, Section 4."

and
WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 100 ft. 5 in.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, there existed on this street between the intersecting streets on July 25, 1916, a stable for more than five horses; and

WHEREAS, this application was granted by the board at its meeting on July 22, 1924, on certain conditions, and

MINUTES

that applicant requested modification of the condition as to the time for obtaining permits.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be constructed fireproof, not exceeding two stories in height above grade; that the front walls shall be finished in face brick with architectural terra cotta or stone trimmings; that the gable walls throughout their entire height and length, and the rear wall, 1st story, shall be unpierced; that any gasoline storage equipment shall be located at the extreme westerly end of the building at the front; that any ramp installed shall be at least 25 ft. back from the face of the building; that the building zone regulations shall be complied with in all other respects; that all permits necessary for the prosecution of the work shall be obtained within nine months, and the building completed within eighteen months from the date of this action.

AREAS FIXED. (335-25-BZ)

The chairman presented and read a communication from Alfred J. Boulton, requesting the board to fix the area of notification deemed affected by erection and maintenance

of a garage; premises 89-99 Granite street, Brooklyn. The following area was approved by the board:

Both sides of Granite street from a point 100 ft. west of Evergreen avenue to a point 400 ft. west of proposed garage; also the south side of Pilling street from a point 100 ft. west of Evergreen avenue to a point 240 ft. west of Evergreen avenue.

(231-25-BZ)

The chairman presented and read a communication from Julian V. Carabba, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 49-59 Avenue U, Brooklyn.

The following area was approved by the board:

Both sides of West 11th street from a point 200 ft. south of Avenue U to a point 400 ft. north of proposed garage. Both sides of Avenue U from 86th street to a point 400 ft. east of premises in question; also the east side of West 12th street from Avenue U to a point 150 ft. north of Avenue U.

Adjourned 2.20 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

MINUTES

BOARD OF STANDARDS AND APPEALS.

REGULAR MEETING.

TUESDAY AFTERNOON, APRIL 21, 1925.

THE RESOLUTION:

(18-25-S)

WHEREAS, Joseph C. Schaeffler, for Marie G. Currier, owner, filed, January 7, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 12 East 56th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 29, 1924, reads:

"1. Provide an outside iron balcony fire escape on the rear of the building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 deg., extending from ground to roof, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals. * * *";

and

WHEREAS, the building is non-fireproof, five stories in height, 22 ft. 6 in. by 97 ft. 9 in. in area at 1st story and 22 ft. 6 in. by 64 ft. in area above. OCCUPIED as follows: 1st story, millinery showrooms and workroom, 16 persons; 2nd and 3rd stories, showrooms and millinery workrooms, 16 persons on each story; 4th and 5th stories, dwelling. EXITS: An interior wooden stairway extending from 1st story to top story, with iron stair to scuttle in roof, enclosed in fireproof partitions with fire doors at openings; and also a secondary wooden stairway, enclosed in fireproof partitions leading from the 2nd to 1st story; a fire escape balcony, taking in one window at the 4th story, rear, east and an iron stair leading to extension roof of No. 14 East 56th street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner proposes to construct a fire escape balcony, taking in one window, on the 5th story, rear, west, and connect same with fire escape on No. 10 East 56th street; and

WHEREAS, this case was amended to include the objections of the bureau of buildings, dated June 20, 1924, reading as follows:

"1. Exits 2nd floor must be remote from each other.

"2. Egress from the termination of fire escapes on rear must be through an open court or fireproof passageway to street.

"4. Fire escape on rear must be extended to roof."

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1 of the order of the fire department and Items 1, 2 and 4 of the order of the superintendent of buildings, on condition, as to Item No. 1 of the superintendent's order, that iron stairway shall be provided on the rear, from the 2nd story extension roof to the roof of the extension of premises 14 East 56th street; granted as to Item Nos. 2 and 4, on condition that a fire escape to include one window shall be provided on the rear, with balcony at top story and stair and landing to the roof of extension of No. 10 East 56th street, and that a balcony fire escape shall be provided from not less than one window on the 4th story, with connecting stairs to roof of extension of No. 14 East 56th street; that the roof of the extension of the 3rd story shall be unobstructed, with egress therefrom to adjoining roof, No. 14, and on further condition that the occupancy shall remain substantially unchanged.

1495-24-S.

MINUTES

THE RESOLUTION:

(1495-24-S)

WHEREAS, Henri Schwob, for Lawyers Realty Co., owner, filed, December 20, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 45 Maiden lane, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 15, 1924, reads:

"1. Arrange the fire escape on the north side of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"Among the defects noted are the following:

"3. No fireproof passageway from termination to street."

and

WHEREAS, the building is non-fireproof, five stories, mezzanine and basement in height, 20 ft. 11 in. by 123 ft. 11 in. in area; OCCUPIED principally as an office building; the top story being occupied for the manufacture of watches, 70 persons above the 2nd story; 2nd story being vacant at present; EQUIPPED with a fire alarm signal system. EXITS: An interior fireproof stairway extending from 1st story to roof; enclosed in fireproof partitions with kalameined doors at openings; a fire escape with fireproof windows along the course thereof, on the rear of the building extending from the roof to the fire escape balcony on the 2nd story; a bridge connects this balcony with fire escape on the rear of premises No. 48 John street; and

WHEREAS, petitioner contends that the only manufacturing in the premises is done on 5th story and that it is of such a nature (watchmaking) that there is no fire hazard involved, and contends further that the existing means of exit are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the egress from the termination of the fire escape, on condition that a standard fire escape shall be provided on the rear, with egress from termination by iron bridge to No. 48 John street at the 1st story level, and granted only so long as conditions as to occupancy and use remain unchanged.

42-25-S.

PETITIONER—Samuel Rosenblum, for Sanitary Wet Wash Laundry Co., Inc., lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—349-351 West 26th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

Negative 0
Absent: Superintendents Kleinert and McDermott 2

THE RESOLUTION:

(42-25-S)

WHEREAS, Samuel Rosenblum, for Sanitary Wet Wash Laundry Co., Inc., lessee, filed, January 10, 1925, a petition,

with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 349-51 West 26th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 26, 1924, reads:

"Order No. 68660-LD:

"1. Arrange the fire escape on the north side of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the Rules of the Board of Standards and Appeals * * *.

"Among the defects noted on this fire escape are the following: No openings 2 ft. by 6 ft. leading to balconies. No stairway from lowest balcony to ground."

and

WHEREAS, the building is non-fireproof, six stories in height, 49 ft. 7 in. by 98 ft. 9 in. in area; OCCUPIED as a tenant factory, 62 persons above the 1st story. EXITS: An interior wooden stairway extending from 1st story to the top story (with iron ladder to scuttle in roof), enclosed in fire resisting partitions with fire doors at openings; a fire escape (with 85 degree connecting ladders) in the easterly rear court of the building, with fireproof windows along the course thereof, extending from the top story to the 2nd story balcony; the means of egress from the various stories to the fire escape balconies being by means of double hung windows which are 2 ft. 2 in. wide and in total height range from 6 ft. 6 in. to a minimum of 5 ft. in height, the afforded opening for egress being one-half this height; ROOFS of adjoining buildings—to east, same height; to west, three stories lower; and

WHEREAS, petitioner proposes to extend the interior stairs and also the fire escape to the roof; to provide, on the fire escape, 60 degree connecting stairs, screen same to a height of 4 ft. 6 in. and to provide steps to the sills of the windows and otherwise bring the fire escape up to standard, excepting as to egress from termination, and proposes to carry the fire escape stair from the 2nd story balcony to the 1st story level and to provide a fireproof passage parallel to the northerly wall of the building and from this passage to provide a door leading to yard of premises 354 West 27th street, with egress from this yard to street by means of said premises.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted only so far as it affects egress from termination of fire escape and the casement doors to balconies on condition that a 60 degree fire escape shall be provided on the rear of the building, with egress from the termination through an unobstructed fireproof passageway with egress to the yard of premises at rear No. 354 West 27th street, and that the order shall be complied with in all other respects, except that double hung fireproof self-closing windows shall be provided above the 2nd story with a fireproof casement door at 2nd story; granted only so long as conditions as to occupancy and use remain substantially unchanged.

THE RESOLUTION:

(112-25-S)

WHEREAS, Samuel Rosenblum, for Warsaw & Co., lessee, filed, January 26, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 333 Seventh avenue (20th floor, north half), Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 29, 1924, reads:

"Order No. 68994-LD:

"1. Remove all partitions not built of incombustible material as per Sections 263 and 270 of the Labor Law."

and
WHEREAS, the building is fireproof, 20 stories in height, 97 ft. by 99 ft. in area; OCCUPIED as show rooms and manufacturing, an average of 40 persons per story, petitioner occupying the north half of the 20th story as illustrator's studio, 40 persons; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Six interior fireproof stairways, four extending from the 1st story to the top story, all are enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, petitioner contends that no manufacturing is done on the premises in question; that the partitions are of a temporary nature, necessitated by the kind of business conducted, and that they form individual offices for the artists employed and that ample hall space has been provided to all exits.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the northerly end of the 20th story of this building, on condition that there shall be no manufacturing or factory work done on these premises; that all wall partitions covered by this order shall be not less than 18 inches below the sprinkler heads, and that the upper portion of the temporary partitions extending to ceiling shall be glazed with thin sheet glass; that the stair hall and elevator shaft shall be enclosed in approved fireproof partitions, and any openings therein shall be provided with self-closing fireproof doors.

THE RESOLUTION:

(174-25-S)

WHEREAS, Samuel Rosenblum, for Charles Kaye Realty Co., Inc., owner, filed, February 11, 1925, a petition, with

the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 105-17 Madison avenue, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated January 27, 1925, read:

"No. 71290-LD:

"1. Provide approved self-closing fire doors at openings leading to both interior stairways on all stories, opening outwardly so as not to obstruct the stairways, as per Section 271 of the Labor Law and Rule 507 of the Industrial Code and Rule 505 of the Industrial Code as amended by the Board of Standards and Appeals April 3, 1923. Doors have wire glass panels 21 in. by 29 in. containing more than 360 square inches and more than 720 square inches on each story."

"No. 71292-LD:

"1. Remove the revolving doors at street on Madison Ave. side of building and replace with doors arranged so as to open outwardly, as per Section 271 of the Labor Law.

"2. Remove cigar stand in main hall on 1st story on Madison Ave. side of building, which provides egress to street from interior stairs, as per Rule 5 of the Board of Standards and Appeals, adopted July 29th, 1924."

and

WHEREAS, the building is fireproof, 20 stories in height, 123 ft. by 100 ft. in area; OCCUPIED as offices and salesrooms (clothing industry), approximately 1,000 persons above the 1st story, the 4th, 7th and 11th stories being vacant at present; EQUIPPED with a sprinkler system and a telegraphic communication to fire headquarters. EXITS: Two interior fireproof stairways and also a fire tower extending from 1st story to roof; enclosed in fireproof partitions with fireproof doors at openings; the doors leading to the stairways being furnished with a single wire glass panel 21 in. by 28 in. (589 sq. in) in area; and in the doors to fire tower panels are 23 in. by 26 in. in area; ROOFS of adjoining buildings are four and eight stories lower; and

WHEREAS, petitioner contends that the excess area of wire glass in the door panels is small; that the two revolving doors are of the collapsible type and that the cigar stand on the 1st story is in a complete fireproof vestibule separated from the main hall proper and that it does not in any way interfere with ingress or egress.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Order No. 71290, on condition that all openings shall be equipped with self-closing fireproof doors and that any wire glass panel now in place shall not exceed an area of 23 in. by 26 in.; and denied, as to Items 1 and 2 of Order No. 71292.

198-25-S.

PETITIONER—Thomas B. Leahy, for 566-568 Seventh Avenue, Inc., owner.

SUBJECT—Variation of labor law as cited in letter of superintendent of buildings.

For Petitioner: Thomas B. Leahy.

ACTION OF BOARD—Petition denied.

THE VOTE TO GRANT—

Affirmative

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell, Fire Chief Kenlon, Deputy Fire Commissioner Hannon, Chief Inspectors Bastress, Ryan and Bales

Absent: Mr. Gunnison and Superintendents Kleinert and McDermott

MINUTES

THE RESOLUTION:

(198-25-S)

WHEREAS, Thomas B. Leahy, for 566-568 Seventh Avenue, Inc., owner, filed, February 18, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a letter of the superintendent of buildings, affecting premises 566-568 Seventh avenue, Borough of Manhattan; and

WHEREAS, the letter of the superintendent of buildings, dated January 13, 1925, reads:

"Before a Certificate of Occupancy may be issued on the above premises for use as a factory, the following objections must be removed:

"2. A second means of exit in accordance with Section 270, subdivision 3 of the Labor Law; present unenclosed exterior stairway does not meet the requirements of the Labor Law.

"3. Interior stairway and elevator shafts must be enclosed in 6 in. terra cotta or 8 in. brick wall, present 2½ in. partitions not in accordance with the requirements of the Labor Law.

"5. All windows in exterior walls must be fireproof self-closing and area of glass must not exceed 720 square inches per light.

"6. Passageway from termination of stairs to building line must be enclosed in fireproof material.

"7. Glass in fireproof doors in stair enclosure not permitted.

"8. Wood partitions must be removed from all floors, Labor Law required that all partitions in the interior of a fireproof building shall be built of incombustible material."

and

WHEREAS, the building is fireproof, nine stories in height, 50 ft. by 100 ft. in area; OCCUPIED as a tenant factory, the occupancy to be limited to the legal capacity of exits; the means of egress consisting of an interior stairway extending from the 1st story to the 9th story, with egress through pent house to roof, enclosed in angle-iron frame covered with metal lath and plaster with self-closing fireproof doors at openings, glazed with wire glass panels over 720 sq. in. in area; a fire escape on the rear of the building, extending from the 8th story to a balcony at the 2nd story level, with egress by stairway to an enclosed passageway in building connecting with the 1st story hallway to street, this hallway being enclosed in angle-iron construction covered with metal lath and plaster, with the exception of a plate glass show window at the extreme front, with egress from the 1st story hall through restaurant and passageway to 40th street, the windows along course of the fire escape will be made fireproof, self-closing, all exterior windows in the building are of wood frames glazed with plate glass; the building to be equipped with a sprinkler system; and

WHEREAS, petitioner requests the acceptance of the existing stairway and passageway enclosures as being fireproof construction, although not conforming with the requirements of the labor law, the acceptance of the exterior windows other than those opening on the fire escape, which will be made fireproof, self-closing, the acceptance of the glass panels in doors to the stairway enclosure, and the acceptance of the present means of egress from the termination of the fire escape, to which he proposes to add a connection by bridge to the fire escape on the adjoining premises to the rear, and proposes to comply with the requirements of the board as set forth in recent actions of the board on the interior combustible partitions and to provide clear wire glass instead of plate glass in show window in hallway.

Resolved, that the letter of the superintendent of buildings be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

THE RESOLUTION:

(129-25-S)

WHEREAS, L. Victor Weil, for Bernhard Mayer & Samuel Weil, owners, filed, February 4, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 596 Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 19, 1924, reads:

"Order No. 68212-LD:

"1. Remove the substandard fire escape on the east side of the building or reconstruct same in accordance with section 274 of the Labor Law and Rule 3 amended by the Board of Standards and Appeals May 9, 1924.

"NOTE: Among the defects noted are the following:

"Windows on course not fireproof, self-closing.

and

WHEREAS, the building is fireproof, 12 stories in height, 42 ft. by 199 ft. 6 in. in area; OCCUPIED as a tenant factory, 150 persons in the entire building; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior stairways, both extending from the 1st story to the roof, enclosed in fireproof partitions with fireproof doors at the openings; a sub-standard fire escape (with non-fireproof windows along the course thereof) on the Crosby street front of the building, extending from the top story to the 2nd story balcony with drop ladder to street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the fire escape is not intended as a means of exit, but that they may be of some advantage to the fire department in the event of a fire in the premises.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the window frames on the course of the fire escape shall be at least metal covered with metal or kalamein sash and that the upper sash shall be made fixed, and that all windows on the course of the fire escape shall be glazed with wire glass.

THE RESOLUTION:

(147-25-S)

WHEREAS, Louis A. Sheinart, for P. J. McCann, owner, filed, February 3, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 210 Bowery, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 13, 1924, reads:

"1. Remove the fire escape on the front of the building or reconstruct same in accordance with Section 274 of the Labor Law as per Rule 3 amended by the Board of Standards and Appeals adopted May 9th, 1924.

"2. Provide an outside iron balcony fire escape on the rear of building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees extending from ground to roof, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with Section 271 of the Labor Law."

and

WHEREAS, the building is non-fireproof, four stories in height, 25 ft. by 95 ft. in area at 1st and 2nd story and 25 ft. by 45 ft. in area above; OCCUPIED as a tenant factory, 18 persons above the 1st story. EXITS: An interior wooden stairway extending from 1st story to roof; enclosed in wooden partitions (open on the top story) with wooden doors at openings; a fire escape balcony with drop ladder to street on the 2nd story, front of the building, and also a fire escape balcony on the 4th story, rear, with ladder to roof of 2nd story extension; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends, in view of the light occupancy, that the existing means of exit are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Items No. 1 and 2, on condition that standard reconstructed fire escape, embracing at least two (2) windows, shall be provided with 60 degree connecting stairs, with counterbalanced drop ladder in guides.

"Order No. 71010-LD:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"NOTE: Among the defects noted are the following: No fireproof passageway from termination to street."

and

WHEREAS, the building is non-fireproof, seven stories in height, 25 ft. by 96 ft. 5 in. in area at the 1st story and 25 ft. by 88 ft. 5 in. in area above. OCCUPIED: 1st story, store (florist); 2nd story, instruction in dress design, 25 persons; 3rd story, dressmaking, 30 persons; 4th story, custom tailors, 8 persons; 5th story, salesroom of furniture, 3 persons; 6th story, salesroom of rugs, 3 persons; 7th story, architects, 9 persons; EQUIPPED with a fire alarm signal system. EXITS: An interior fireproof stairway, extending from the 1st story to the roof, enclosed in fireproof partitions with fireproof doors at the openings; a 45 degree fire escape on the rear of the building with fireproof windows along the course thereof, extending from the roof to the 2nd story balcony, with a stair leading therefrom to yard and also a stair leading to extension roof of building to rear, with egress from termination of fire escape by means of adjacent extension roofs; ROOFS of adjoining buildings—to west, 8 stories higher; to east, 10 ft. lower; and

WHEREAS, petitioner contends that the building is of such a narrow width and that the stairs, elevators, etc., are located in such a manner that it would be a great hardship to provide the required fire passage, and requests the acceptance of the existing means of egress from the termination of the fire escape.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects egress from termination of the fire escape on the 2nd story level, on condition that balcony with steps to the roof of the extension of premises 3 East 52nd street shall be provided, and iron stairs from the 1st story and basement up to same balcony, with gate operative from lower side only, to the stairs leading up from the 1st story and a sign shall be posted on the 2nd story balcony, indicating the line of travel; granted only so long as conditions as to occupancy and use otherwise remain unchanged.

187-25-S.

PETITIONER—Samuel Rosenblum, for Third Street Ice Co., Inc., lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—90 East Third street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell, Deputy Fire Commissioner Hannon, Chief Inspectors Bastress, Ryan and Bales..... 9

MINUTES

Negative 0
Absent: Mr. Gunnison, Fire Chief Kenlon
and Superintendents Kleinert and Mc-
Dermott 4

THE RESOLUTION:

(187-25-S)

WHEREAS, Samuel Rosenblum, for Third Street Ice Co., Inc., lessce, filed, February 16, 1925, a petition, with the board of standards and appcals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner and a decision of the superintendent of buildings, affecting premises 90 East 3rd street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 10, 1921, reads:

"No. 24033-LD:

"1. Provide an outside iron balcony fire escape at the rear of building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from ground to roof, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with Section 271 of the Labor Law.";

and the decision of the superintendent of buildings, rendered February 24, 1925, reads:

"Inspection of the above premises in connection with the issuance of a Certificate of Occupancy was made and it was found that 'the fire escape on front of building does not meet the requirements of the Labor Law as a second means of exit.'";

and

WHEREAS, the building is non-fireproof, five stories in height, 32 ft. 10 in. by 51 ft. (irregular) in area; OCCUPIED for the manufacture of sausages, smoked meats, etc., 10 persons above the 1st story. EXITS: An interior wooden stairway extending from 1st story to roof; enclosed in fire resisting partitions with fireproof (wire glass paneled) doors at openings; a 60 degree fire escape on the front of the building, with non-fireproof windows along the course thereof, extending from the roof to 2nd story balcony, with drop ladder in guides to street; ROOFS of adjoining buildings—to east, same level; to west, 3 ft. higher; and

WHEREAS, petitioner contends that it is practically impossible to erect a fire escape on the rear of the premises, as that portion is taken up by the plant equipment of the building—ice boxes, smoke house, etc.—and in view of the occupancy being about three persons per story, requests that the existing means of exit be accepted.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that a standard reconstructed fire escape shall be provided on the front of the building, with 60 degree connecting stairs and counterbalanced drop ladder in guides, that the stairs shall be enclosed in fire retarding partitions in accordance with the rules of the board of standards and appeals, and that the occupancy shall not exceed ten (10) persons above the 1st story.

86-25-S.

PETITIONER—William F. Doyle, for Jules Sorel, owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—33 West 56th street, Manhattan.

APPEARANCES—

For Petitioner: William F. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell, Deputy Fire Commissioner Hannon, Chief Inspectors Bastress, Ryan and Bales..... 9

Negative 0

Absent: Mr. Gunnison, Fire Chief Kenlon and Superintendents Kleinert and McDermott 4

THE RESOLUTION:

(86-25-S)

WHEREAS, William F. Doyle, for Jules Sorel, owner, filed, January 21, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 33 West 56th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered October 22, 1924, in acting on Alteration Application No. 2465-24, reads:

"8. A fireproof passage should be provided from the foot of the fire escape to the street (Sec. 273-9 L. L.). If fireproof passageway is on adjoining premises, permission of adjoining owner should be filed.

"9. Provide two exits remote from each other as per Sec. 271 L. L. and the rules of the Board of Standards and Appeals.

"12. All doors opening on stairway should open outwardly.

"13. Show more definitely method of enclosing stairway in fire resisting partitions as per Rule 504 Industrial Code.";

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 100 ft. in area. OCCUPIED: 1st story, shipping, 5 persons; 2nd story, showrooms, 10 persons; 3rd story, dwelling, 5 persons; 4th story, work rooms (dresses), 25 persons; 5th story, office and workrooms, 25 persons. EXITS: An interior wooden stairway extending from the 1st story to the top story, enclosed in metal lath and plaster partitions with wooden doors at openings; a fire escape with non-fireproof windows along the course thereof on the rear of the building extending from the top story balcony (gooseneck ladder to roof) to yard, with egress from the termination of the fire escape by means of door in fence and down a ladder to yard of 31 West 56th street, with egress through the building to street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner proposes to fireproof all windows along the course of the fire escape and to equip with iron shutters all other windows within 30 ft. of openings in adjacent buildings, and also proposes to protect the ceiling of the cellar with sheet rock.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Item No. 8, *on condition* that an opening shall be provided at the yard level to adjoining premises to the east, with egress therefrom through fireproof passage direct to street and consent to be filed with the superintendent of buildings; *granted*, as to Item No. 9, *on condition* that a fire escape balcony with not less than 60 degree connecting stairs shall be provided in the rear from the window of the main building to include the entire extension on 4th and 5th floors, to extend stairways from the yard to the roof level; that the passageway from the rear stair hall to show room on the 2nd story shall be fire retarded in accordance with the rules of the board of standards and appeals; *denied*, as to Item No. 12, and *granted*, as to Item No. 13, *on condition* that the foregoing conditions shall be complied with in all respects; present occupancy and use to remain unchanged.

MINUTES

25-25-S.
PETITIONER—Leopold L. Langrock.
SUBJECT—Variation of labor law as cited in order of fire commissioner.
PREMISES AFFECTED—35-37 Ormond place, Brooklyn.
APPEARANCES—
For Petitioner: Leopold L. Langrock.
For Administration: Inspector Maher of fire department.
ACTION OF BOARD—Petition denied.
THE VOTE TO GRANT—

Affirmative 0
Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell, Deputy Fire Commissioner Hannon, Chief Inspectors Bastress, Ryan and Bales..... 9
Absent: Mr. Gunnison, Fire Chief Kenlon, Superintendents Kleinert and McDermott 4

THE RESOLUTION:

(25-25-S)

WHEREAS, Leopold L. Langrock, owner, filed, January 8, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 35-37 Ormond place, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 11, 1924, reads:

"1. Extend the interior stairway at the southwest end of building to the roof, as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories in height, 41 ft. 4 in. by 165 ft. (irregular) in area; separated into two sections by a brick partition wall, with openings therein on each story; OCCUPIED for the manufacture of children's underwear, approximately 205 persons above the 1st story; EQUIPPED with a sprinkler system. EXITS: An interior fireproof stairway extending from 1st story to roof; enclosed in fireproof partitions with fire doors at openings, and two wooden stairways extending from 1st to top story, both enclosed in wooden partitions with wooden doors at openings; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the existing exits are adequate, and further contends that a similar order was accepted in June, 1918, as complied with—after certain work had been done—by the board of review of the fire department; and

WHEREAS, this case was dismissed for lack of prosecution at the meeting held on March 24, 1925, and reopened by vote of the board on April 7, 1925.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

APPLIANCES SUBMITTED FOR APPROVAL.

PETITIONER—J. H. Bunnell & Company.
SUBJECT—Approval of Jove Break Glass Pull Lever Interior Fire Alarm Box.
APPEARANCES—
For Petitioner: None.
For Administration: Inspector Mulligan of fire department.

ACTION OF BOARD—Petition approved.
THE VOTE TO APPROVE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Connell, Deputy Fire Commissioner Hannon, Chief Inspectors Bastress, Ryan and Bales..... 8
Negative 0
Absent: Messrs. Gunnison, Holland, Fire Chief Kenlon, Superintendents Kleinert and McDermott 5

THE RESOLUTION:

(1512-24-SA)

WHEREAS, J. H. Bunnell & Company filed, December 23, 1924, a petition, with the board of standards and appeals, for approval of their device known as Jove Break Glass Pull Lever Interior Fire Alarm Box; and

WHEREAS, this device was referred to the fire department for test and report; and

WHEREAS, a report of the chief of the bureau of fire prevention of the fire department, dated March 26, 1925, recommends approval of the device.

Resolved, that the board of standards and appeals does hereby approve the device known as the Jove Break Glass Pull Lever Interior Fire Alarm Box when constructed and installed in accordance with the recommendation set forth in the report of the chief of the bureau of fire prevention.

Adjourned 5.40 p. m.

WILLIAM J. O'GORMAN, Secretary.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday May 8, 1925, at 10 a. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

res shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above is a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and fire hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system here supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire-extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] *two hundred (200)* feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads40
- (b) For Conran* one (1) inch heads10
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 6

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads80
- (b) For Conran* one (1) inch heads20
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 12

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally tried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and twenty (120) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a hand pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over one (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

CONTENTS

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Minutes of Meeting, Board of Appeals, April 28, 1925.
- Minutes of Special Meeting, Board of Appeals, April 28, 1925.
- Reserve Calendar.
- Notice of Public Hearing.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, on Tuesday, May 5, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, May 12, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(103-25-A)

WHEREAS, Cornell Utilities Company, Inc., for Alfred V. S. Olcott, owner, filed, January 23, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises at south side of West 250th street, 128 ft. west of Goodridge avenue, Borough of The Bronx; and

WHEREAS, the decision of the fire commissioner, rendered December 30, 1924, reads:

"Alteration App. No. 2660-24:

"No. (2) Note on tank drawing, tank will be tested in presence of a Fire Department representative and afterwards coated with a suitable rust resisting material.

"(5) Note on plan: 'Piping will be tested in pres-

ence of a Fire Department Representative.'

"(10) Burners must be of a type approved by the Board of Standards and Appeals.

"(9) Show auxiliary tank located at least 10 ft. from any fire or flame.";

and

WHEREAS, the building is non-fireproof, two stories in height, 37 ft. by 40 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 550-gallon fuel oil storage tank, a 55-gallon auxiliary tank, a NoKoi burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the tank is buried underground and encased in 12 in. of concrete, and requests the acceptance of an affidavit to the effect that the tank has undergone a shop test and that all piping is standard wrought iron piping.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 2, on condition that certificate of factory test shall be filed with the fire commissioner; as to Item 5, on condition that standard wrought iron piping shall be used throughout the installation; as to Items 9 and 10, on condition that the door of fire-box of boiler shall be equipped with a self-closing device; that direct ventilation shall be provided from the room in which boiler is located to outer air; and that the installation shall comply with the fuel oil rules in all other respects.

156-25-A.

APPELLANT—Stephen M. Smith Co., for Dykes Lumber Company, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—350 West 44th street, Manhattan.

APPEARANCES—

For Appellant: Stephen M. Smith.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon 7
Negative 0
Absent 0

THE RESOLUTION:

(156-25-A)

WHEREAS, Stephen M. Smith Co., for Dykes Lumber Company, owner, filed, February 5, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 350 West 44th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 15, 1925, reads:

"With reference to your application, dated June 16, 1924, for a permit to maintain a non-storage garage at the above location, I regret to inform you that I am without power to grant such permit because the building is of frame construction.

"You are, therefore, ordered to

"1. Remove all motor vehicles, the fuel tanks of which are not empty and to discontinue the use of premises as a garage.";

and

WHEREAS, the building is frame, three stories in height, 25 ft. by 100 ft. in area; OCCUPIED for the storage of lumber and also for the storage of two automobile delivery trucks in the driveway of the premises; and

WHEREAS, appellant proposes to fireproof the walls and ceiling of the driveway and install a pair of metal-covered doors at the rear of the driveway, thereby isolating it from the lumber storage.

MINUTES

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that not more than two (2) automobile trucks, the property of the owner of the premises, used in the conduct of his business on the premises, shall be maintained in the open runway, separated from the lumber storage at the rear by a fireproof self-closing door; and *on further condition* that the runway, side walls and ceiling shall be fire-retarded in accordance with the rules of the board of standards and appeals.

195-25-A.

APPELLANT—Cornell Utilities Co., Inc., for Samuel Rosenman, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—262 West End avenue, Manhattan Beach, Brooklyn.

APPEARANCES—

For Appellant: William Porter.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon 7
Negative 0
Absent 0

THE RESOLUTION:

(195-25-A)

WHEREAS, Cornell Utilities Company, Inc., for Samuel Rosenman, owner, filed, February 17, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 262 West End avenue, Borough of Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered January 10, 1925, affecting Alteration Application No. 2736-24, reads:

"(3) Note on tank drawing, tank will be tested in presence of a Fire Department Representative and afterwards coated with a suitable rust-resisting material.

"(7) Note on Plan: 'Piping will be tested in presence of a Fire Department Representative.'

"(11) Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the building is non-fireproof, two stories in height, 26 ft. by 35 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 550-gallon fuel oil storage tank, a 55-gallon auxiliary tank, a NoKol burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the tank is buried underground and encased in 12 in. of concrete, and requests the acceptance of an affidavit to the effect that the tank has undergone a shop test and that all piping is standard wrought iron piping.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 3, *on condition* that certificate of factory test shall be filed with the fire commissioner; as to Item 7, *on condition* that all piping used throughout the installation shall be of standard wrought iron; as to Item 11, *on condition* that door of fire-box of boiler shall be equipped with self-closing device; and that the installation shall comply with the fuel oil rules in all other respects.

196-25-A.

APPELLANT—Cornell Utilities Co., Inc., for William Fox, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—316 West 91st street, Manhattan.

APPEARANCES—

For Appellant: William Porter.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

THE RESOLUTION:

(196-25-A)

WHEREAS, Cornell Utilities Co., Inc., for William Fox, owner, filed, February 11, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 316 West 91st street, Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered January 15, 1925, in acting on Alt. Application No. 213-24, reads:

"2. Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the building is non-fireproof, four stories in height, 20 ft. by 85 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 200-gallon oil storage tank, a 55-gallon auxiliary tank, a NoKol burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the tank was installed under the fuel oil rules of 1922, and requests the acceptance of an affidavit to the effect that the tank has undergone a shop test, and contends further that the piping is standard wrought iron piping, and further requests a temporary permit pending the action of the board upon an application for the approval of the burner.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the door of fire-box of boiler shall be equipped with self-closing device, and that the installation shall comply with the fuel oil rules in all other respects.

99-25-A

APPELLANT—Cornell Utilities Co., Inc., for Michael Shea, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—220 Corbin place, Brooklyn.

APPEARANCES—

For Appellant: William Porter.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon
Negative
Absent

THE RESOLUTION:

(99-25-A)

WHEREAS, Cornell Utilities Co., Inc., for Michael Shea, owner, filed, January 23, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 220 Corbin place, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered December 30, 1924, in acting on Alteration Application No. 2651-24, reads:

"2. Note on tank drawing, tank will be tested in presence of a Fire Department Representative and afterwards coated with a suitable rust resisting material.

"5. Burners must be of a type approved by the

MINUTES

Board of Standards and Appeals.”;

WHEREAS, the building is non-fireproof, two stories in height, 28 ft. by 47 ft. in area; OCCUPIED as a dwelling;

WHEREAS, a fuel oil burning system has been installed consisting of a 700-gallon fuel oil tank buried outside the building; a 55-gallon auxiliary tank, a Nokol burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant requests the acceptance of a sworn affidavit to the effect that the tank has undergone a shop test, and contends that in all other respects the installation conforms with the fuel oil rules excepting in that the burner is not an approved burner.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 2, on condition that certificate of factory test shall be filed with the fire commissioner; as to Item 5, on condition that door of fire-box of boiler shall be equipped with self-closing device; and that the installation shall comply with the fuel oil rules in all other respects.

1402-24-A.

APPELLANT—John A. Harriss.

SUBJECT—Appeal from decision of fire commissioner. PREMISES AFFECTED—1775 Broadway, Manhattan.

APPEARANCES—

For Appellant: W. H. Driscoll and George P. Knight.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon	7
Negative	0
Absent	0

THE RESOLUTION:

(1402-24-A)

WHEREAS, John A. Harriss, for Columbus Circle Arcade Co., owner, filed, November 26, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 1775 Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 27, 1924, reads:

“4. Provide a hydrostatic test of fuel oil storage tank or tanks of at least 30 lbs. per square inch, if welded tank or 25 lbs. per square inch if riveted tank.”;

WHEREAS, the building is fireproof, three stories and pent house in height, 216 ft. by 210 ft. (irregular) in area; OCCUPIED as stores and offices, approximately 1,200 persons in entire building; and

WHEREAS, a fuel oil burning system has been installed in the basement of the premises, consisting of two riveted 60 ft. diameter (20,000 gal. capacity) storage tanks and the necessary approved burners, valves and piping; and

WHEREAS, appellant contends that these two tanks, which were provided under the assumption that the building would be much higher, were installed under the fuel oil rules of 1922, and in conformity therewith were buried below ground and encased in 12 in. of concrete; and contends further that the tanks have undergone a shop test and has filed an affidavit to this effect with the bureau of fire prevention.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that a test shall be made under the existing conditions in the presence of representatives of the fire department; that the tanks shall be filled with wa-

ter and so maintained for not less than six hours without loss of pressure.

1414-24-A.

APPELLANT—Oscar Goldschlag, for Fanny Schumacher, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1104-1122 Webster avenue, The Bronx.

APPEARANCES—

For Appellant: Oscar Goldschlag.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon	7
Absent	0

THE RESOLUTION:

(1414-24-A)

WHEREAS, Oscar Goldschlag, for Fanny Schumacher, owner, filed, December 1, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 1104-1122 Webster avenue, Borough of Bronx; and

WHEREAS, the decision of the fire commissioner, rendered November 21, 1924, in acting on Alteration Application No 1591-23, reads:

“2. 1000 gallon gasoline tank not permitted, maximum capacity is 550 gallons.”;

and

WHEREAS, the building is non-fireproof, one story in height, having a frontage of 209 ft. 10 in. on Webster avenue and 196 ft. 2 in. on Brook avenue; OCCUPIED as a public garage, there being a 1,000-gallon gasoline storage tank buried underground at the Webster avenue front of the premises; and

WHEREAS, this case was withdrawn at the meeting held on February 24, 1925, and reopened by vote of the board on March 31, 1925; and

WHEREAS, appellant contends that the building was erected as a public garage in 1918 and that a certificate of occupancy was issued, and that the tank is encased in 12 in. of concrete and buried 4 ft. below the ground, and contends that hardship would result if new tanks are ordered to be installed.

Resolved, that the decision of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

1491-21-A.

APPELLANT—Mrs. Fannie Kelly.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—North side of Hillside avenue, 400 feet east of Nagel avenue, Manhattan.

APPEARANCES—

For Appellant: Frank Kelly.

ACTION OF BOARD—Appeal reopened; one year's extension of permit granted.

THE VOTE TO REOPEN AND EXTEND PERMIT ONE YEAR—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell	6
Negative	0
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(1491-21-A)

WHEREAS, Fannie Kelly, owner, filed, November 30, 1921, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises north side of

MINUTES

Hillside avenue, 400 ft. east of Nagel avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 3944-LC, dated January 8, 1921, reads:

"With reference to your application, dated July 17, 1920, for a permit to maintain a non-storage garage at the above location, I regret to inform you that I am without power to grant such permit because the building is of frame construction.

"Sec. 5, par. 4, Chapt. 5 of the Code of Ordinances provides that 'no change of occupancy or use shall be made in any * * * now existing * * * building * * * unless such building conforms to the provisions of the building code with respect to buildings hereafter altered for the proposed new occupancy or use.

"Sec. 90, Chapt. 5 of the Code of Ordinances provides that * * * no frame * * * structure shall be hereafter built * * * within * * * the fire limits.

"You are, therefore, ordered to—

"1. Remove all motor vehicles, the fuel tanks of which are not empty and to discontinue the use of premises as a non-storage garage."

and

WHEREAS, the building is of frame and corrugated iron construction, located in a residence district, one story in height, 20 ft. by 30 ft. in area; OCCUPIED as a garage for five cars; and

WHEREAS, appellant states that the building has been used as a garage since its erection in 1906 and that space has been continually rented out from 1907 until the present time and has filed affidavits as to the renting out of space since 1915; and

WHEREAS, this appeal was granted by the board at its meeting February 14, 1922, on certain conditions, and appellant requested a modification of these conditions as to time limit.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* to permit the temporary use of the building as a five-car garage for a period not to exceed one year from the date of this action.

679-24-A.

APPELLANT—William F. Doyle, for Gerstendorfer Bros., owners.

SUBJECT—Application for reopening—appeal from orders of fire commissioner.

PREMISES AFFECTED—80-92 Third street, Brooklyn.

APPEARANCES—

For Appellant: William F. Doyle.

ACTION OF BOARD—Appeal reopened; modification granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell

Negative

Absent: Fire Chief Kenlon.....

THE RESOLUTION:

(679-24-A)

WHEREAS, Wm. F. Doyle, for Gerstendorfer Bros., owner, filed, May 15, 1924, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 80-92 3rd street, Brooklyn; and

WHEREAS, the orders of the fire commissioner, dated March 31, 1924, read:

"No. 53741-F:

"1. Install a standpipe system with risers 4 inches in diameter * * *."

"No. 53742-F:

"1. Provide iron or kalameined shutters at all openings in the exterior wall above 1st story * * *";

and

WHEREAS, the premises consist of a non-fireproof building, four stories and basement in height, 113 ft. 7 in. by 199 ft. 8 in., irregular, 7,000 sq. ft. in area, with a one-story and mezzanine extension, about 5,000 sq. ft. in area; OCCUPIED for the manufacture of paints, 63 persons; and

WHEREAS, appellant contends the building is equipped with a two-source sprinkler system with an average pressure of 24 lbs. per square inch at highest line of sprinklers; that the two buildings, each less than 10,000 sq. ft., are separated by brick walls with openings therein, protected by fireproof safety catch doors; and in regard to Order No. 53742-F, contends that there are sprinkler heads near each window; and

WHEREAS, this appeal was granted by the board at its meeting June 27, 1924, on certain conditions, and appellant requested a modification of these conditions as to location of sprinkler heads near windows.

Resolved, that the orders of the fire commissioner be and they hereby are *modified*, and the appeal be and it hereby is *granted on condition* that the building be equipped with approved two-source sprinkler system, so long as conditions as to occupancy and use and its relation to adjoining premises remain unchanged; and that the openings in the exterior embraced in this order shall be protected with sprinkler heads not more than 3 ft. 6 in. distant therefrom.

614-24-A.

APPELLANT—Briggs Engineering Company, Inc., representing owner.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—212 25th street, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request; appeal reopened; 90-day extension of permit granted.

THE VOTE TO REOPEN AND EXTEND PERMIT—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell

Negative

Absent: Fire Chief Kenlon.....

THE RESOLUTION:

(614-24-A)

WHEREAS, Emil Guterman, for Joseph H. Meyer Bros., owner, filed, May 2, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 212 25th street, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 87738-LC, dated April 4, 1924, reads:

"With reference to your application for a permit to store fuel oil at above location, I regret to inform you that I am without power to grant such a permit for the reason that the storage of fuel oil at the above location is not in accordance with the rules adopted by the Board of Standards and Appeals on Nov. 6, 1919, as amended January 18, 1924.

"You are therefore ordered to remove all fuel oil from the storage tank and discontinue the further storage and use of fuel oil at the above location."

and

WHEREAS, the building is non-fireproof, one story and cellar in height, 45 ft. by 134 ft. in area. OCCUPIED: Cellar, boiler room; 1st story for the manufacture of pearl beads, and office; and

WHEREAS, a fuel oil burning system has been installed which has been accepted and approved, excepting the "burner," by the fire department; and

WHEREAS, appellant requests a 90-day permit pending an inspection of the oil burner by the board; and

WHEREAS, this appeal was granted by the board at its meeting June 1, 1924, on certain conditions, and appellant requested a modification of these conditions as to time limit.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety (90) days, on

MINUTES

condition that the installation shall comply with the fuel oil rules in all other respects, pending an inspection by committee of board of standards and appeals, approval of the burner now pending before the board; and that a factory test of storage tank shall be accepted in lieu of the required hydrostatic test.

618-24-A.

APPELLANT—Albert Hayden, owner.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—517 83rd street, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request; appeal reopened and 90-day extension of permit granted.

THE VOTE TO REOPEN AND EXTEND PERMIT—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell	6
Negative	0
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(618-24-A)

WHEREAS, A. Hayden, owner, filed, May 2, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 517 83rd street, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 88135-LC, dated April 12, 1924, reads:

"With reference to your application for a permit to store fuel oil at the above location, I regret to inform you that I am without power to grant such a permit for the reason that the storage of fuel oil at the above location is not in accordance with the rules adopted by the Board of Standards and Appeals on Nov. 6, 1919, amended Jan. 18, 1924.

"You are therefore ordered to remove all fuel oil from the storage tank and discontinue the further storage and use of fuel oil at the above location.";

and

WHEREAS, the building is non-fireproof, two stories and basement in height, 20 ft. by 60 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules excepting in that the burner (a Powerlight Oilheat) is not an approved burner; and

WHEREAS, this appeal was granted by the board at its meetings, July 15, 1924, October 28, 1924, and January 27, 1925, for a temporary period of 90 days, and appellant requests an extension of the period.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, for a temporary period of ninety days, pending the action of the board of standards and appeals on petition for approval of burner, on condition that the installation complies with fuel oil rules of the board of standards and appeals in all other respects.

For Applicant: Philip J. Sinnott.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Messrs. Holland and Connell and Fire Chief Kenlon 4
Negative: Messrs. Kennedy, Dowd and Gunnison 3
Absent 0

THE RESOLUTION:

(7-25-BZ)

WHEREAS, Philip J. Sinnott, for Gilman, Schlesinger Building Co., owner, filed, January 2, 1925, an application, under the building zone resolution, to permit in a residence use and also 1½ times height district the erection and maintenance of a building to be used for business purposes and also the erection of the street walls to a height of 108 ft. 6 in.; premises 1896-1898 Arthur avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that Arthur avenue and Belmont avenue are residence use districts and Tremont avenue is a business use district and they are also 1½ times height districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 10, 1924, in acting on N. B. App. No. 3100-24, reads:

"1. Erection of proposed business building in residence district is contrary to provisions of Building Zone Resolution.

"2. Height of building exceeds limits permitted by Building Zone Resolution on street 60 ft. wide in 1½ times height district.";

and

WHEREAS, the proposed building is to be of fireproof construction, nine stories (108 ft. 6 in.) in height, with a frontage of 75.63 ft. and a depth of 121.71 ft. and 112.12 ft.; to be occupied as offices and bank; and

WHEREAS, the board was divided in opinion as to whether or not the applicant substantiated his basis of appeal under section 21, and as to whether or not he would suffer a hardship if not allowed to erect a business building on a vacant plot in a residence district between an existing business building, partly used as a jail, and an apartment house.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

275-25-BZ.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

THE RESOLUTION:

(275-25-BZ)

WHEREAS, Leo Sheridan, owner, filed, March 11, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 88-110 Crown street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Crown street, Montgomery street and Bedford avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 10, 1925, reads:

"The erection of a public garage for more than five motor vehicles in a business district.. Denied.";

and
WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 240 ft. and a depth of 131 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed it would be a hardship to deprive this applicant of the proposed garage use, in view of the non-conforming invasion already in existence in this street.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a two-story structure in height above grade; that the building shall be erected fireproof; that a rear yard, not less than 10 ft. in depth, shall be provided at the level of the 2nd story; that the gable walls shall be unpierced throughout their entire height and length, and the rear wall throughout the 1st story

MINUTES

shall be unpierced, any openings in the rear wall above the 1st story to be equipped with fixed steel sash, glazed with wire glass and with not more than one ventilator to each frame; that any gasoline storage equipment installed shall be located at the extreme front of the building at the street wall; that the street front of the building shall be finished in face brick with architectural terra cotta or stone trimmings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

57-25-BZ.

APPLICANT—John DeHart, for Breslauer Construction Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1933-1935 Cedar avenue, The Bronx.

THE VOTE TO GRANT—

Affirmative: Messrs. Kennedy, Dowd and Gunnison	3
Negative: Chairman Walsh, Messrs. Holland and Connell and Fire Chief Kenlon	4
Absent	0

THE RESOLUTION:

(57-25-BZ)

WHEREAS, John DeHart, for Breslauer Cons. Co., Inc., owner, filed, January 13, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises 1933-1935 Cedar avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Cedar avenue is a business district and Lewis place and Railroad right of way is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 2, 1925, in acting on N. B. App. No. 15-25, and April 24, 1925, in acting on amendment to N. B. App. No. 15-25, reads:

"Erection of proposed garage for the storage of more than five motor vehicles in unrestricted district extending into business district is contrary to the provisions of the Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story and basement in height, with a frontage of 50 ft. and a depth of 138 ft. and 128 ft., irregular; and to be occupied as a garage for more than five motor vehicles; and

WHEREAS, that portion of the plot within the business use street is as yet uninvaded by prohibitive or non-conforming use, the hardship alleged would be on the other property owners on the street on which the garage is proposed.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

1437-23-BZ.

APPLICANT—Benjamin Nieberg, for C. & M. Garage, Inc., present owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—235-249 West 154th street, Manhattan.

APPEARANCES—

For Applicant: Julius Eckman.

For Opposition: None.

CONDITIONS—As specified in resolution.

THE VOTE TO MODIFY—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland and Connell.. 5

Negative: Fire Chief Kenlon..... 1

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1437-22-BZ)

WHEREAS, Frank Case Hayden, for Edward Waldron and Fannie Hass, owners, filed, December 6, 1923, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 235-249 West 154th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, January 8, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 154th street is a business district, West 155th street is an unrestricted district and Macombs place is a business and unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 26, 1923, in acting on N. B. App. 577-23, reads:

"1. Proposed occupancy is contrary to the provisions of Section 4, Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story and basement in height, with a frontage of 203 ft. 9 in. and a depth of 99 ft. 11 in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, owing to the character and use of adjoining property, the board deemed that there would be hardship in preventing applicant from erecting the proposed structure; and

WHEREAS, this application was granted by the board at its meeting of January 8, 1924, on certain conditions, and applicant requested a reopening of the case, and the application was reopened by the board at its meeting held on March 31, 1925, as to modification of design; applicant proposing to erect two stores and a gasoline selling station on the Macombs place front of the premises, thereby reducing the frontage of the garage on West 154th street from 203 ft. 9 in. to 180 ft. 5 in., and proposes also, in view of decreasing the area of the garage, to omit the fireproof division wall required in the original resolution; and

WHEREAS, the board deemed the requested modification and rearrangement of structural layout of the conditions proposed a reasonable one.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the structure shall be of fireproof construction, limited to one story in height above grade, with roof of flat design and construction; that the rear wall shall be unpierced throughout its entire

MINUTES

height and length; that any skylights installed shall be glazed with plain glass, protected above and below with wire guards; that the front elevation on 154th street and Macombs place shall be finished with face brick and architectural terra cotta or stone trimmings; that the building shall not exceed 180 ft. front on 154th street; that the Macombs place front of the building be restricted to conforming use, separated from garage by a wall of approved masonry, unpierced; that there shall be no vertical or horizontal openings between the basement and 1st story.

THE RESOLUTION:

(621-24-BZ)

WHEREAS, William F. Doyle, for Dexter Holding Corp., owner, filed, May 5, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 234-40 East 54th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 54th street, Third avenue and Second avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 2, 1924, in acting on N. B. App. No. 262-1924, reads:

"1. The erection of a garage for the accommodation of more than five motor vehicles in a business district is prohibited by the Building Zone Resolution, Art. 2, Sec. 4.";

and

WHEREAS, the proposed building is to be of fireproof construction, three stories in height, with a frontage of 100 ft. and a depth of 100 ft. 5 in.; and

WHEREAS, there existed on this street between the intersecting streets on July 25, 1916, a garage for more than five motor vehicles; and

WHEREAS, an application for variation of the building zone resolution was granted on these premises permitting the erection of a two-story garage, and the owner now wishes to erect a three-story building.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be erected fireproof and limited in height to three stories above grade; that the rear wall of the 1st story shall be unpierced throughout its entire height and length; that any gasoline storage system installed must be located at the extreme front of the building on the 54th street side; that the front elevation shall be finished in face brick, architectural terra

cotta or stone trimmings or the equivalent; that there shall be no signs erected, exposed or displayed on the roof of these premises; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

175-25-BZ.

APPLICANT—Murray Klein, for Louis Marcus, owner.
SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—307-313 Rutledge street, Brooklyn.

APPEARANCES—

For Applicant: Murray Klein.

For Opposition: None.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE RESOLUTION:

(175-25-BZ)

WHEREAS, Murray Klein, for Louis Marcus, owner, filed, February 13, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises 307-313 Rutledge street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Rutledge street is an unrestricted district easterly from a point 100 ft. east of Harrison avenue and Harrison avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 10, 1925, in acting on N. B. App. No. 1481-25, reads:

"Proposition contrary to zone resolution, Art. II, Sec. 4a 15. The erection of a public garage partly in an unrestricted district but extending into a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story and basement (23 ft.) in height, with a frontage of 86 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, an appeal was granted under date of January 18, 1918, expiring by limitation; and

WHEREAS, the board deemed the granting of this application a reasonable variation in view of the small area extending into the business use from the unrestricted district and the existing invasions by non-conforming uses.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be restricted to a one-story structure above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that there shall be no vehicular entrance within 25 ft. of the westerly gable wall; that any gasoline storage equipment installed shall be located at the extreme westerly side of the building at the street front; that there shall be no signs displayed other

MINUTES

an one projecting sign indicating the title of the garage; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; that all permits necessary for the prosecution of the work shall be obtained within six months and the building completed within one year from the date of this action.

64-19-BZ.

APPLICANT—Frederick J. Flynn, for Adolph Lewisohn, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending into a residence district the erection of a theatre.

PREMISES AFFECTED—4023-4039 Broadway, 600-618 West 170th street and 603-605 West 169th street, Manhattan.

APPEARANCES—

For Applicant: Frederick J. Flynn.

For Opposition: None.

ACTION OF BOARD—Case reopened and extension of time granted on same conditions as original resolution.

CONDITIONS—As specified in resolution.

THE VOTE TO EXTEND TIME—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland and Connell..	5
Negative	0
Absent: Mr. Kennedy and Fire Chief Kenlon	2

THE RESOLUTION:

(564-19-BZ)

WHEREAS, George Mort Pollard, architect, for Adolph Lewisohn, owner, filed, July 25, 1919, with the board of appeals, an application, under the building zone resolution, to permit the erection of a theatre extending from a business district into a residence district; premises 4023-4039 Broadway, 600-618 West 170th street and 603-605 West 169th street; and

WHEREAS, a public hearing was held on this application by the board of appeals at its regular meeting, August 19, 1919, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and this application was granted on certain conditions; and

WHEREAS, the applicant requested that the time limit condition attached to the original resolution be modified so as to extend the time for the completion of the building until August 19, 1921, as the condition of the material and labor market were very unsettled; and

WHEREAS, a public hearing was held on this application by the board of appeals at its special meeting November 30, 1920, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 169th and West 170th streets are residence districts and Broadway business; and

WHEREAS, the decision of the superintendent of buildings, rendered in acting on N. B. 179-19, reads:

"1. Inasmuch as the premises are located partially in a residential district, the erection of a theatre in this district is prohibited by the building zone resolution, sec. 3.";

and

WHEREAS, an application was filed in the bureau of buildings for a permit to erect a one- and two-story fireproof theatre and and store building, 83 ft. by 167 ft. 11 $\frac{5}{8}$ in. in area, the building being located on the west side of Broadway, which is a business district, and extending back on 169th and 170th street into the residence district a distance of 20 ft. 11 $\frac{3}{4}$ in.; the Broadway front to be used for entrance and stores and the motion picture theatre portion to be located on the rear, with an unobstructed exit court opening to 169th street, the court extending at the extreme point approximately 35 ft. into the residence district; and

WHEREAS, this application was heretofore granted by the

board and the time limit within which the construction was to be completed has expired, the board deemed it reasonable to extend the time for construction.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations and that the application be and it hereby is granted on condition that the portion of the street walls of the proposed moving picture theatre extending into the residential district shall be built of pressed brick and cut stone and of ornamental design; that there shall be no entrance to or exit from the structure into the residential district on the 170th street front; that the proposed court giving exit to 169th street shall be enclosed on the sides with a brick wall, faced with pressed brick, with cut stone coping, and at the building line on 169th street similar piers shall be built to support iron gates of ornamental design, which shall remain locked at all times except when pictures are being exhibited, and on the further condition that the height and area provisions of the building zone resolution be complied with; and

Resolved, further, that any permits necessary for the prosecution of the work shall be obtained within nine months of the date of this action and that the work shall be completed within eighteen months from the date of this action.

698-22-BZ.

APPLICANT—Emma J. Wright, owner.

SUBJECT—Application (re: order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of five motor vehicles, spaces rented out.

PREMISES AFFECTED—57 Evelyn place, The Bronx.

APPEARANCES—

For Applicant: Nathaniel Kent and Wm. J. Wright.

For Opposition: None.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell	6
Negative	0
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(698-22-BZ)

WHEREAS, Emma J. Wright, owner, filed, May 16, 1922, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of five (5) motor vehicles, space rented to persons not residing on the premises; premises 57 Evelyn place, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meetings, February 20, 1923, and April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Evelyn place, Aqueduct avenue and Grand avenue are residence districts; and

WHEREAS, the order of the fire commissioner, dated December 6, 1921, Order No. 10188-C, reads:

"1. Discontinue the maintenance of garage which is not maintained strictly as an accessory to dwelling on same lot.";

and

WHEREAS, the building is of non-fireproof construction, one story in height, with a frontage of 49 ft. and a depth of 20 ft.; occupied as a garage for four automobiles of the pleasure car type, space rented to persons not residing on premises; and

WHEREAS, this application was previously granted by the board for a temporary occupancy and the case reopened by vote of the board; and

MINUTES

WHEREAS, the board deemed the granting of this application for a limited use and a limited area, in view of the filing of 85 per cent of consents of areas fixed by board as property deemed affected, thereby complying with the requirements of the zoning resolution, section 7-G.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be restricted in height to a one-story building; that the ground area dimensions shall not exceed a depth of 20 ft. and a frontage of 49 ft.; that the rear and gable walls shall be unpierced throughout their entire height and length; that there shall be no advertising signs of any nature or description displayed on the premises; that there shall be no gasoline storage equipment installed; that the vehicle storage capacity of the garage shall be limited to five automobiles of the pleasure car type, space for three of which only may be rented to persons not residing on the premises.

194-25-BZ.

APPLICANT—Richard J. Cullinan, for Joseph Rosenzweig, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—North side of West 170th street, 11.33 feet west of Cromwell avenue, The Bronx.

APPEARANCES—

For Applicant: Richard J. Cullinan.

For Opposition: Morris Schechner and Katie Dunphy.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell	6
Negative	0
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(194-25-BZ)

WHEREAS, Richard Cullinan, for Joseph Rosenzweig, owner, filed, February 17, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises north side of West 170th street, 11.33 ft. west of Cromwell avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Cromwell avenue is an unrestricted district, West 170th street and Jessup avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 29, 1925, in acting on N. B. App. No. 175-25, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in unrestricted district extending into a business district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 112.7 ft. and a depth of 67.82 ft. and 119.76 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, the premises under appeal is in an unrestricted district, excepting 19 ft. along the rear line, which is a business district, the board deemed that applicant has substantiated his basis of appeal under sections 7-b and 7-c of the zoning resolution, and in view of the difference in grade between Cromwell avenue and Jessup avenue the property in the rear would not be adversely affected, considered that the granting of this application a reasonable adjustment.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be restricted to a two-story structure; that there shall be no skylight within 25 ft. of the rear wall; that the rear and gable walls shall be unpierced throughout their entire height and length; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; that there shall be no roof sign installed or maintained; that any gasoline storage equipment installed shall be located at the extreme northerly end of the structure at the street wall; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

850-24-BZ.

APPLICANT—Philip J. Sinnott, for Harry Gillman, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—West side of Broadway 502 ft. north of 240th street, The Bronx.

APPEARANCES—

For Applicant: Philip J. Sinnott.

For Opposition: None.

ACTION OF BOARD—Application reopened; modification granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland and Connell.....	5
Negative: Mr. Gunnison	1
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(850-24-BZ)

WHEREAS, Philip J. Sinnott, for Harry Gillman, owner, filed, June 25, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises west side of Broadway, 502 ft. north of 240th street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals at its special meeting, March 3, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Broadway and 240th street are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 23, 1924, in acting on N. B. Application No. 1767-24, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story and basement in height, with a frontage of 109 ft. and a depth of 100 ft.; to be occu-

MINUTES

d as a garage for the storage of more than five motor vehicles; and

WHEREAS, a committee of the board visited the premises and reports:

REPORT OF COMMITTEE:

On February 12th, 1925, a Committee of the Board consisting of Chairman Walsh, Fire Chief Kenlon, Messrs. Holland, Connell and Gunnison visited these premises under appeal, for a public garage under Sec. 21 of the Zoning Resolution.

The entire West side of Broadway from 240th Street to Parkway Street is as yet undeveloped and unimproved other than two gasoline selling stations, the property is solely within as what is designated on the zone maps as business use district; directly opposite on the Easterly side of Broadway the entire frontage of this land is designated as Van Cortlandt Park property.

This appeal ordinarily in the absence of any non-conforming or prohibited use could only come within provision of exception 7G of the Building Zone Resolution and, therefore, would require the consent of the Sinking Fund Commission, which is unlikely to consent, and therefore improbable of obtaining.

The Park land property directly opposite is an extensive tract of swamp land though in the course of fill for at least the last ten years and to date is far from completion, though still used as a dump for cinder and other practical and inoffensive refuse; the particular site is individual and peculiar to itself, as Broadway has the elevated railroad structure of the subway in operation in front of the property, an elevated railroad spur to the South running Westerly to the repair shop immediately to the rear of this site and an elevated steel runway from the shops to the elevated structure immediately abutting and contiguous at the Northerly line of the property under appeal.

A conforming business use seems improbable because of the surrounding elevated railroad structures and untenable beyond contradiction for the erection of the tenement house or similar dwelling use.

The Committee is of the opinion, therefore, that this proposed use is properly justified under the exercise of its discretionary authority and a proper adjustment on the basis of equity and recommends the granting of this appeal with restrictions as to vehicular entrances and fireproof safeguards.

(Signed) WILLIAM E. WALSH,
JOHN KENLON,
HENRY L. CONNELL,
JAMES P. HOLLAND,
JOS. B. GUNNISON (dissenting).

WHEREAS, this application was granted by the board at its meeting, March 3, 1925, on certain conditions, and applicant requested a modification of these conditions as to windows in wall overlooking property of applicant.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a 1½ story structure above grade, that the gable walls shall be unpierced throughout their entire height and length; that the ramp to the 2nd story shall be set back at least 10 ft. from the front or street wall of the structure; that the front elevation shall be finished in face brick of panel design with architectural terra cotta and stone trimmings; that no roof signs shall be erected or maintained on the premises and that there shall be no portable gasoline equipment maintained or operated outside of the structure;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

409-23-BZ.

APPLICANT—Rich & Mathesius, for Frederick Mathesius, owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—Southeast corner of Vermilyea avenue and Dyckman street, Manhattan.

APPEARANCES—

For Applicant: Frederick Mathesius.

For Opposition: None.

ACTION OF BOARD—Application reopened and extension of time to obtain permits granted.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND TIME TO OBTAIN PERMITS—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and

Connell 6

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(409-23-BZ)

WHEREAS, Rich & Mathesius, for Frederick Mathesius, owner, filed, April 6, 1923, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southeast corner of Vermilyea avenue and Dyckman street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, June 26, 1923, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Dyckman street and Sherman avenue are business districts and Vermilyea avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 21, 1923, in acting on N. B. App. No. 115-23, reads:

"1. Inasmuch as the premises are located in a business district the erection of a building for a garage occupancy is contrary to the Building Zone Resolution, Section 4.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories and cellar in height, with a frontage of 100 ft. and a depth of 100 ft. in the 1st story and a depth of 30 ft., irregular, in the 2nd story; to be occupied, cellar and 1st story, garage for more than five motor vehicles; 2nd story, offices; and

WHEREAS, there existed on this street between the intersecting streets on July 25, 1916, a stable for more than five horses; and

WHEREAS, this application was granted by the board at its meeting, June 26, 1923, on certain conditions, and applicant, under date of April 21, 1925, requested an extension of the time limit imposed.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the front portion of the structure, both on Dyckman street and Vermilyea avenue, shall be restricted to shops or stores at least 30 ft. deep, separated from the garage, which is proposed to be located in the rear, by an unpierced wall of approved masonry, and that the vehicular entrance to the garage shall be restricted to one opening on Dyckman street front of building, southerly end, and that the front elevation of the building shall be finished with front brick and architectural terra cotta or stone trimmings; and that

MINUTES

no skylight shall be within 50 ft. of the Vermilyea avenue gable wall, and that the roof shall be constructed of fire-proof material;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

608-23-BZ.

APPLICANT—James P. Whiskeman, for Charles F. Rittel, Jr., owner.

SUBJECT—Application for extension of time (re: decision of superintendent of buildings) to permit partly in an unrestricted district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—North side of Fordham road, 78.56 feet west of Cedar avenue, The Bronx.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request for extension of time; application reopened and time extended to obtain permits and erect building.

THE VOTE TO REOPEN AND EXTEND TIME—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell	6
Negative	0
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(608-23-BZ)

WHEREAS, James P. Whiskeman, for Chas. F. Rittel, Jr., owner, filed, May 17, 1923, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five (5) motor vehicles; premises north side of West Fordham road, 78.56 ft. west of Cedar avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals at its regular meeting, July 31, 1923, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West Fordham road is a business district and Cedar avenue and Harlem River terrace are unrestricted districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 14, 1923, in acting on N. B. App. No. 1549-23, reads:

"1. Erection of proposed garage for storage of more than five (5) motor vehicles partly in business district is contrary to provisions of building zone resolution.";

and

WHEREAS, the proposed building is to be of non-fire-proof construction, two stories in height, with a frontage of 75 ft. and a depth of 125 ft., to be occupied as a garage for more than five motor vehicles; and

WHEREAS, under the provisions of section 7, subdivision C, the board is empowered to act; and

WHEREAS, the application was granted by the board at its meetings, July 3, 1923, and July 15, 1924, on certain conditions, and applicant requested a modification of the time limit.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building be constructed fireproof and limited to two stories in

height; that the front elevation be finished in face brick with architectural terra cotta or stone trimmings; and that all permits necessary for the prosecution of the work be obtained within nine months and the building completed within eighteen months from the date of this action.

AREAS FIXED.

(379-25-BZ)

The chairman presented and read a communication from Walter Scheminger, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage premises 350-354 Broadway, West New Brighton, Staten Island.

The following area was approved by the board:

Both sides of Broadway from a point 200 feet north of Cary avenue to a point 400 feet south of proposed garage; also both sides of Cary avenue from a point 200 feet east of Broadway to a point 400 feet west of premises in question.

(269-25-BZ)

The chairman presented and read a communication from William A. Giesen, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 2805 Pond place, The Bronx.

The following area was approved by the board:

Both sides of Pond place from East 197th street to a point 100 feet south of East 198th street. Both sides of East 197th street from a point 100 feet east to a point 100 feet west of Pond place; also the properties at rear and for a distance of 50 feet on either side of the side lot lines of premises in question.

(363-25-BZ)

The chairman presented and read a communication from Alfred J. Boulton, requesting the board to fix the area of notification deemed affected by the erection and maintenance of a poultry slaughter house; premises east side of private right of way 226 feet north of 84th street, Brooklyn.

The following area was approved by the board:

The entire block bounded by 84th street, Bay 16th street, 81st street and 18th avenue; also the south side of 84th street from Bay 16th street to 18th avenue.

(288-25-BZ)

The chairman presented and read a communication from William F. Conran, requesting the board to fix the area of notification deemed affected by erection and maintenance of a garage; premises 184-190 Dyckman street, Manhattan.

The following area was approved by the board:

Both sides of Dyckman street and also Thayer street from Broadway to a point 400 feet east of proposed garage. Both sides of Vermilyea avenue from Dyckman street to a point 200 feet north of Dyckman street; also the east side of Broadway from Thayer street to Dyckman street.

Adjourned, 1:30 p. m.

WILLIAM J. O'GORMAN, Secretary.

THE RESOLUTION:

(146-25-A)

WHEREAS, New York Steam Corp., owner, filed, January 30, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 513 East 59th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 10, 1923, reads:

"Order No. 17297-LC:

"5. Brick up opening in wall at entrance to boiler room (from garage building) as per Plan No. 419-22 and Section 159-1, Chapter 10, Code of Ordinances.";

and

WHEREAS, the premises consist of a plot of ground upon which is located the plant of the New York Steam Corporation, consisting of several buildings, including a fireproof garage building, one story above grade and three stories below grade, 32 ft. by 64 ft. in area, and also a boiler room; an opening on the 3rd basement level leads to the boiler room to the west. The garage building is occupied on top (grade) story as a non-storage garage; 1st basement, offices and pipe stock, 8 persons; 2nd basement, storage, electrical supplies, 2 persons; 3rd basement, storage, 2 persons; and

WHEREAS, appellant contends that the boilers are automatically fed, there being no opening of furnace doors; and that the garage portion of the premises is separated from the boiler room by an automatic fireproof door, located on the grade floor.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that not more than one door opening, limited to 3 ft., shall be permitted between the boiler room and garage; that said opening shall be equipped with a self-closing fireproof door, with interlocking metal jambs and edges and an 8 in. concrete sill in doorway; and that no gasoline storage equipment shall be maintained in the garage premises.

APPELLANT—Boris W. Dorfman.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—264-284 Furman street, Brooklyn.

APPEARANCES—

For Appellant: Joseph B. Silman.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 7

Negative 0

Absent 0

THE RESOLUTION:

(148-25-A)

WHEREAS, Boris W. Dorfman, for New York Dock Company, owner, filed, February 3, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 264-284 Furman street, Brooklyn; and

MINUTES

WHEREAS, the decision of the fire commissioner, rendered January 15, 1925, reads:

"In answer to your letter I beg to advise you that the above plans would be approved were a connection to street main for standpipe supply acceptable. However, since the building is over 20,000 square feet in area, a street main connection cannot be accepted, and a 3500 gallon gravity tank as per Rules of the Board of Standards and Appeals must be installed."

and

WHEREAS, the building is fireproof, one story in height, 217 ft. by 127 ft. in area; OCCUPIED as a public garage, 4 persons; and

WHEREAS, appellant contends that the building is located on two streets; that it is low in height, and in each street upon which the building faces there are city water mains fed both ways (an 8 in. in Montague street and a 20 in. main in Furman street), each having a pressure of 50 pounds per square inch.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the omission of the gravity tank, *on condition* that standpipe equipment complies with the rules in all other respects and that the building shall be restricted to a one-story structure.

586-20-A.

APPELLANT—Charles G. Meinken, executor of Estate of Henry Meinken, deceased, lessee.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—428-430 West 14th street and 427-429 West 13th street, Manhattan.

APPEARANCES—

For Appellant: Walter R. Herrick.

For Tenant: Joseph Cella and J. J. Benjamin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Resolution of May 15, 1923, rescinded.

THE VOTE TO RESCIND—

Affirmative: Chairman Walsh, Messrs. Gunnison, Holland, Connell and Fire Chief Kenlon 5

Negative: Mr. Kennedy 1

Absent: Mr. Dowd 1

THE RESOLUTION:

(586-20-A)

WHEREAS, Henry Meinken, executor, for Estate of Henry Meinken, owner, filed, July 31, 1920, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 428-30 West 14th street and 427-29 West 13th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"1. Provide a separate and distinct system of automatic sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

and

WHEREAS, the appeal was dismissed by the board at its meeting, September 28, 1920, for lack of prosecution, and appellant requested a reopening of case on the ground that the delay in prosecuting had been caused by death in family of appellant; and

WHEREAS, the building is non-fireproof, five stories and basement in height, 50 ft. by 206 ft. 6 in. in area. OCCUPIED: 1st story, stores; 2nd story, hotel supplies and marbling paper, 15 persons; 3rd story, paper storage and laundry, 24 persons; 4th story, laundry and mirrors, 24 persons; 5th story, paper box manufacturing, 33 persons; and

WHEREAS, appellant contends that there is no hazardous

occupancy and that as the building faces on two (2) streets there is ample means for fighting fire; and

WHEREAS, this appeal was granted by the board at its meeting, May 15, 1923, on certain conditions, and it appears that these conditions have been violated, and that an extra hazardous condition exists; on motion to rescind by Fire Chief Kenlon, the board having power under rule No. 7 of rules of procedure adopted by the board of standards and appeals.

Resolved, that the action of the board under date of May 25, 1923, granting the appeal, be *rescinded*, and the order of the fire commissioner *affirmed*, and the appeal be and it hereby is *denied*.

171-25-A.

APPELLANT—Charles G. Meinken, executor of Estate of Henry Meinken, deceased, lessee.

SUBJECT—Appeal from order of fire commissioner.

APPEARANCES—

For Appellant: Walter R. Herrick.

For Tenant: Joseph Cella and J. J. Benjamin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon 6

Absent: Mr. Dowd 1

THE RESOLUTION:

(171-25-A)

WHEREAS, Charles G. Meinken, executor of Estate of Henry Meinken, deceased, lessee, filed, February 10, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 427-429 West 13th street and 428-430 West 14th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 6, 1925, reads:

"Order No. 71299-F:

"I, Thomas J. Drennan, Fire Commissioner of the City of New York, hereby certify that the conditions existing on the 2nd, 3rd, 4th and 5th stories in the premises known as number 428-430 West 14th Street, 427-429 West 13th Street and 859-877 Washington Street, Borough of Manhattan, City of New York, are eminently dangerous to life; that an emergency exists requiring that building be vacated above the 1st story. You are hereby ordered to vacate the 2nd, 3rd, 4th and 5th stories of the said premises by noon on the 11th day of February, 1925."

and

WHEREAS, the building is non-fireproof, five stories in height, having a frontage of 50 ft. on West 14th street, 206 ft. 6 in. on Washington street and a frontage of 50 ft. on West 13th street. OCCUPIED: 1st story, stores, 79 persons; 2nd story, offices and fruit storage, 2 persons; 3rd story, paper box storage and laundry bleaching, 12 persons; 4th story, laundry and also wiping material company, 26 persons; 5th story, paper box manufacturing, 33 persons; and

WHEREAS, appellant contends that an order was issued by the fire commissioner on July 8, 1920, to install an automatic sprinkler system throughout the building; that an appeal was made and that this order was modified by the board at the meeting held on May 15, 1923 (Cal. No. 586-20-A) on condition that a thermostatic fire alarm system connected with Central Office be installed throughout the building; that the allowable posted floor load shall not be exceeded at any time, and granted only so long as the occupancy and use remain unchanged; and

WHEREAS, appellant contends further that the fire alarm system has been installed and accepted by the fire department and that changes have been made in the use, but that

MINUTES

the number of occupants is less; and

WHEREAS, it appears that there was a former action of this board under Cal. No. 586-20-A on these premises affecting the installation of a sprinkler system, and the board had modified the order of the fire commissioner on certain conditions, which have been violated, and the board has rescinded its action under Cal. No. 586-20-A.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the appeal (Cal. No. 171-25-A) be and it hereby is denied.

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Dowd 1

THE RESOLUTION:

(208-25-A)

WHEREAS, F. P. Keniston, for Quality Fabric Corporation, lessee, filed, February 21, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 37 West 3rd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 10, 1925, reads:

"Order No. 28141-LC:

"You are hereby notified that the following requirements must be complied with before your Fire Department Permit No. 111951 May be transferred from 40 West 25th Street to 37 West 3rd Street.

"1. Neither gas nor any other means of artificial illumination (except electricity) may be used on any story (including 5th and 6th stories) of the building. Section 232-2-c, Chapter 10, Code of Ordinances.

"4. Protect all steam pipes or risers that are within 6 ft. 0 in. of floor with wire guards or non-combustible pipe covering. Section 235, Subdivision 9, Chapter 10, Code of Ordinances.

"5. Provide suitable guards around radiators and steam pipes to prevent combustible material from coming in contact therewith.

"NOTE: Top shall be sloping so as to prevent same from being used as shelves.

"6. Bottom of guards shall be arranged so as to lift up for cleaning. Section 235-9, Chapter 10, Article 19, Code of Ordinances."

and

WHEREAS, the building is non-fireproof, seven stories in height, 52 ft. by 150 ft. in area; equipped with a sprinkler and also an interior fire alarm system; OCCUPIED as a tenant factory, 84 persons above the 1st story, appellant occupying the top story for the manufacture of automobile tops, side curtains, etc.; and

WHEREAS, appellant proposes to store 25 pounds of celluloid in an approved metal box, and contends that the work is done 35 ft. from the radiator; that the sheets are of the proper size when received, practically no cutting being done, and that the gas illumination referred to is a small gas stove in use on the 6th story and a small two-burner gas stove on the 5th story.

Resolved, that the order of the fire commissioner be and

it hereby is modified, and the appeal be and it hereby is granted on condition that not more than 25 pounds of finished sheet celluloid shall be maintained on premises, stored in a double-walled metal cabinet.

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Dowd 1

THE RESOLUTION:

(227-25-A)

WHEREAS, Cornell Utilities Co., Inc., for M. L. Frost, owner, filed, February 25, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 105 Onslow place, Kew Gardens, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, rendered February 21, 1925, in acting on Alt. Application No. 130-23, reads:

"7. Note on tank drawing, tank will be tested in presence of a Fire Department Representative and afterwards coated with a suitable rust resisting material.

"8. Note on plan: 'Piping will be tested in presence of a Fire Department Representative.'

"10. Burners must be of a type approved by the Board of Standards and Appeals."

and

WHEREAS, the building is frame, 2½ stories in height, 36 ft. by 25 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 500-gallon fuel oil tank, a 55-gallon auxiliary tank, a NoKoi burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the system was installed under the rules of 1922 and asks the acceptance of an affidavit to the effect that the tank has undergone a shop test; that the piping is all standard wrought iron piping, and requests a permit pending the approval of the burner.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 7, on condition that certificate of factory test shall be filed with the fire commissioner; as to Item 8, on condition that standard wrought iron piping shall be used throughout the installation; as to Item 10, on condition that the door of fire-box of boiler shall be equipped with a self-closing device; and that the installation shall otherwise comply with the fuel oil rules in all respects.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Connell and Fire Chief Kenlon 5
Negative 0
Absent: Messrs. Dowd and Holland..... 2

THE RESOLUTION:

(285-25-A)

WHEREAS, Jacob Lubroth, for Velbard Realty Co., Inc., owner, filed, March 12, 1925, an appeal, with the board of appeals, from a decision of the superintendent of buildings, affecting premises 523-545 Fulton street, Brooklyn; and

WHEREAS, the decision of the superintendent of buildings, rendered March 6, 1924, in acting on Application No. 3008-25, reads:

"Proposed amendment to occupy a portion of the third floor area of a non-fireproof building exceeding 5,000 sq. ft. in area, as a commercial school, is contrary to Sect. 72 of Bldg. Code, and is hereby denied.";

and

WHEREAS, the building is non-fireproof, three stories in height, with a frontage of 131 ft. 4 in. on Fulton street and 185 ft. 8 in. on Gold street (irregular in area). OCCUPIED: 1st story, stores; 2nd story, restaurant; 3rd story, business school; the means of egress consisting of an interior fireproof stairway at the front of the building with direct egress to Fulton street; a fireproof enclosed stairway at the rear of the building with exit to a 9 ft. 5 in. wide unobstructed alleyway to Gold street; a bridge on the 3rd story connecting to adjoining building under same ownership; the building being equipped with a sprinkler system; and

WHEREAS, appellant contends that the students are all over 15 years of age and fire drills are conducted; that the sprinkler system reduces the hazard to a minimum and that the height of the building is but slightly in excess of the requirements of the code.

Resolved, that the decision of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that all exits as required by law shall be provided and maintained; and *granted*, so long as conditions as to use and occupancy otherwise shall remain unchanged.

Negative 0
Absent: Mr. Dowd 1

THE RESOLUTION:

(40-25-A)

WHEREAS, The Acton Gas Stations, Inc., lessee, filed, January 9, 1925, an appeal, with the board of appeals, from

an order of the fire commissioner, affecting premises Spuyten Duyvil parkway and West 227th street, The Bronx; and

WHEREAS, the order of the fire commissioner reads:

"Referring to your application for a permit to maintain an oil storage plant for the storage of gasoline, at the above address, your attention is respectfully invited to Section 111-5, Chapter 10, Code of Ordinances, which reads in part as follows:

"All storage tanks comprising or forming part of an oil storage plant shall be buried so that the tops thereof shall be at least 2 ft. below the grade level.

"Inspection of the above premises shows the following conditions exist:

"1. Tanks are not buried. Section 111-5, Chapter 10, Code of Ordinances.

"3. One tank exceeds the maximum capacity permitted in Section 111-5, Chapter 10, viz., 100,000 gals.

"4. The total capacity of the group of tanks for which permit is requested exceeds the maximum quantity permitted, viz., 250,000 gals. Chap. 10, Section 111-5, Code of Ordinances.";

and

WHEREAS, the premises consist of a plot of ground along the Harlem Ship Canal, upon which is located, 30 ft. from each other, two steel gasoline storage tanks (cross connected with a 6 in. pipe) of respectively 200,000 and 75,000 gallons capacity; and

WHEREAS, applicant contends that there are no buildings within 5,000 ft. of the location and proposes to increase the height of the ½ in. steel wall forming the pit around the tanks to a point so that the pit will be of such a capacity as to take care of the contents of the tank; and

WHEREAS, a committee of the board inspected the premises and reported:

April 28th, 1925.

Cal. No. 40-25-A.

Premises—Spuyten Duyvil Parkway,
& West 227th St., The Bronx.

REPORT OF COMMITTEE:

A Committee of the Board, consisting of Chairman Walsh, Fire Chief Kenlon, Messrs. Holland and Connell, on April 23rd, 1925, visited the above premises under appeal, on an objection of the Fire Department as to the location of the proposed gasoline oil storage.

There are two (2) existing tanks, used for a number of years, from record, for the storage of oil. They are located on the neck of land projecting into the Spuyten Duyvil Creek of the Harlem Ship Canal, formerly a part of the now discontinued Johnston Iron Works, which land has been taken over by the State.

All buildings and structures from the Creek to the next nearest public roadway, a distance of at least 500 feet or more, have been entirely demolished or removed. There is no structure of any nature that would be involved and as a result, the tanks are isolated from any improvement, structure or condition that would be impaired or adversely affected by any fire menace or hazard, and as the use is temporarily subject to notice of removal, the Committee recommends the *granting* of a temporary permit for one (1) year, *on condition* that reasonably sufficient excess capacity be provided in the nature of surrounding enclosure reservoir, equal in capacity to not less than one-half of the capacity of the tank in each case, to retain and control any leakage or discharge.

(Signed) WILLIAM E. WALSH,
JOHN KENLON,
JAMES P. HOLLAND,
HENRY L. CONNELL,

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of one (1) year from the date of this action, *on condition* that a dike wall shall be constructed outside of each tank, providing thereby a

MINUTES

ervoir, equal in capacity to not less than 50 per cent of the tank itself.

25-A.
APPELLANT—Rudolph P. Miller, for The Society of the New York Hospital, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—6-16 West 16th street and 7-23 West 15th street, Manhattan.

APPEARANCES—

For Appellant: Rudolph P. Miller, Wilson Powell and James Judge.

For Administration: Inspectors Maher and Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Dowd 1

THE RESOLUTION:

(79-25-A)

WHEREAS, Rudolph P. Miller, for The Society of the New York Hospital, owner, filed, January 20, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 6 to 16 West 16th street and 7 to 23 West 15th street, Manhattan; and WHEREAS, the order of the fire commissioner, dated December 31, 1924, reads:

"An inspection of your refrigerating plant located at 6-16 West 16th Street, Borough of Manhattan, shows that the following changes are necessary to have the plant conform with the Fire Department Regulations:

"1. Order No. 63061-F: Provide a tank on roof of at least 3,500 gallons capacity, etc."

"2. Order No. 63062-F: Install a standpipe system, etc."

"3. Order No. 63060-F, New York Hospital:

"Disconnect all house water connections, etc.

"Laundry Building—Extend standpipe line to stairway enclosure, etc.

"Public Ward Building—Provide self-closing fireproof doors, etc.

"Private Ward Building—Provide 2½ in. outlets on standpipe line, etc.

"Provide self-closing fireproof doors on laundry chute, etc.";

and WHEREAS, the building is fireproof, of varying height from one to nine stories), 200 ft. by 206 ft. in area; OCCUPIED as a hospital and having a refrigerating plant located in the northerly part of the cellar; and

WHEREAS, appellant contends that the refrigerating plant separated from all other buildings by masonry walls (with fire doors at all openings thereon) and from the stories above by fireproof floor construction; and further contends that the plant has been operating under fire department permits for six years and, inasmuch as there is no change in conditions affecting the refrigerating plant, requests a temporary permit for the operation of the plant pending the final adjustment of the fire department orders.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the requirements of the resolution under Cal. No. 184-25-A shall be complied with and that the necessary permits shall be obtained from the fire commissioner.

THE RESOLUTION:

(184-25-A)

WHEREAS, Rudolph P. Miller, for The Society of the New York Hospital, owner, filed, February 14, 1925, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 6 to 16 West 16th street and 7 to 23 West 15th street, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated July 30, 1924, February 13, 1925, and July 30, 1924, read:

"No. 63060-F (7-23 W. 15th St. & 6-16 W. 16th St.):

"3. Disconnect all house water connections from standpipe system. Sec. 20, Ch. 12, Code of Ordinances.

"5. Extend standpipe line to stairway enclosure and provide 2½ in. outlets on same with 50 in. of 2½ in. approved hose at each outlet. Sec. 20, Ch. 12, Code of Ordinances.

"8. Provide self-closing fireproof doors on elevator shaft at center of building on all stories. Sec. 20, Ch. 12, Code of Ordinances.

"10. Provide 2½ in. outlets on standpipe line on all stories with 75 ft. of 2½ in. approved hose at each outlet in lengths not greater than 50 ft. Sec. 20, Ch. 12, Code of Ordinances.

"1. Provide self-closing fireproof doors on laundry chute on all stories. Sec. 20, Ch. 12, Code of Ordinances."

"No. 63061-F (7-23 W. 15th St. & 6-16 W. 16th St.):

"You are hereby ordered and required, within twenty days from the date of the service of this order, to:

"1. Provide a tank on roof of at least 3,500 gallons capacity for the standpipe system, said tank to be so elevated that the bottom will be not less than 20 feet above the roof level. Sec. 20, Ch. 12, Code of Ordinances."

"No. 63062-F (7-23 W. 15th St. & 6-16 W. 16th St.):

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the premises consist of a plot of ground 200 ft. by 200 ft. 6 in. in area, upon which is located the New York Hospital, consisting of a group of fireproof structures: the administration building, a seven-story laundry building, a six-story public ward building, a ten-story private ward building and an eight-story nurses' home; EQUIPPED with a 3 in. vertical standpipe line in the private patients' building, the nurses' home and in the laundry building and a 4 in. standpipe line in the public ward building; and

WHEREAS, appellant contends that plans for a new hospital are in course of preparation and that a new hospital will be in operation in a few years and that the existing standpipe was installed some years ago and conformed with the rules in effect at that time, and proposes to continue the 3 in. standpipe line in the private patients' building

MINUTES

and connect it at the base of the 10,000-gallon tank on roof of same building; to extend the present 3 in. line up to bottom of the tank, having at all times 4,000 gallons of water as a standpipe reserve, and disconnect feed line from the standpipe system and use it solely as a house supply line; to reconstruct the header line in the cellar to 4 in. and to connect directly with all four standpipe lines; in re: Item No. 8, proposes to enclose (in the cellar) the elevator shaft and machinery with 4 in. terra cotta partitions with fireproof doors at the openings; and in re: Item No. 11, contends that the laundry chute at its base is protected with automatic sprinkler heads, connected with the house supply.

Resolved, that the order of the fire commissioner, No. 63060, be and it hereby is *modified*, and the appeal, as to Item No. 3, be and it hereby is *denied*; as to Item No. 5, be and it hereby is *granted on condition* that the existing standpipe shall be maintained free of any obstruction in public corridor, directly accessible from the stairs on each floor; as to Item No. 8, *on condition* that the elevator shaft shall be entirely enclosed fireproof in basement or lower story, any openings therein equipped with self-closing fireproof doors; as to Item No. 10, *on condition* that all hose outlets shall be provided with spanner wrench of proper size maintained at outlets with fixed chains; as to Item No. 11, *on condition* that the existing doors shall be lined on the shaft side with metal; that the shaft shall be equipped with not less than two wet sprinkler heads, located inside the shaft between cellar and 1st story level; and that all doors to shaft shall be made self-closing; that the orders of the fire commissioner, No. 63061 and 63062, be and they hereby are *modified*, and the appeal be and it hereby is *granted on condition* that 4 in. cross connection shall be provided in cellar level; that all existing 3 in. and 4 in. risers shall be connected thereto, and that not less than three 4 in. siamese connections be provided on the street fronts; that the siamese connection on the 15th street side shall be lowered so as not to be more than 2 ft. above sidewalk level, and located in an accessible position; that a reserve of not less than 4,000 gallons shall be maintained in gravity tank on highest building for standpipe use; that the standpipe system shall also be connected to the steel tank on roof of nurses' home building, which may be used for house supply also; that all necessary gate and check valves shall be installed; that plans of the standpipe equipment shall be filed with the fire department; and that all work shall be done in accordance with the rules of the board of standards and appeals.

BUILDING ZONE CASES.

1057-24-BZ.

APPLICANT—James J. Walker, for William A. Corcoran, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district and also within "B" area district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles, and also the omission of the rear yard required by the zone resolution.

PREMISES AFFECTED—Northwest corner of 182nd street and Folin street, The Bronx.

APPEARANCES—

For Applicant: None.

For Opposition: Sadie George and Clara Knapp.

ACTION OF BOARD—Laid over to May 12, 1925, at 2 p. m., pending decision of a similar case before the Supreme Court.

166-25-BZ.

APPLICANT—William F. Doyle, for Hallert Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the

erection and maintenance of a building to be used for store purposes.

PREMISES AFFECTED—178-186 Parkside avenue, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Oscar Staul.

ACTION OF BOARD—Laid over to May 12, 1925, at 2 p. m., on request of applicant.

997-24-BZ.

APPLICANT—William F. Doyle, for D. Coppersmith, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—112-144 East 98th street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Walter R. Kuhn and Stanley S. Smith.

ACTION OF BOARD—Laid over to May 12, 1925, at 2 p. m., for final disposition, on request of applicant, subject to new determination on application to the superintendent of buildings.

1393-24-BZ.

APPLICANT—Charles B. Meyers, on behalf of Ruthie Realty Company, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—246-250 Dyckman street, Manhattan.

APPEARANCES—

For Applicant: Charles B. Meyers and Sigmund Solomon.

For Opposition: Russell W. Leary, George Wheeler, John Lever, Robert Veitch and Walter D. Knight.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon.....

Absent

THE RESOLUTION:

(1393-24-BZ)

WHEREAS, Charles B. Meyers, for Ruthie Realty Company, owner, filed, November 24, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 246-250 Dyckman street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 2, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Dyckman street and Payson avenue are business districts and Riverside drive is a residence district; and

WHEREAS, the decision of the superintendent of buildings rendered November 7, 1924, in acting on N. B. Application No. 607-24, reads:

"1. The premises for proposed building are in a residence and business district and a garage for more than five motor vehicles is prohibited as per sections 3 and 4, Building Zone Resolution."

MINUTES

WHEREAS, the proposed building is to be of non-fireproof construction, one story and basement in height, with frontage of 75 ft. on Dyckman street and a frontage of 17½ in. on Payson avenue; to be occupied as a garage for the storage of more than five motor vehicles; and WHEREAS, there was opposition to the granting of this application on the part of adjoining property owners, and the board deemed the applicant failed to sustain the appeal under hardship, as he has owned only a part of the property but a very short time, and admitted the remainder of the plot as not yet acquired in ownership. *Resolved*, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

449-23-BZ.
APPLICANT—William F. Doyle, for Amanda B. Manee, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—East side River avenue, 100 feet south of East 167th street, The Bronx.

APPEARANCES—
For Applicant: William F. Doyle and Thomas S. Walker.

For Opposition: Morris Remson, Francis J. Kuerzi, Samuel J. Kessler, Elmer E. Wigg, Mary Brady and David Tudor.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—
Affirmative 0
Negative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland and Connell..... 5
Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:
(465-23-BZ)
WHEREAS, William F. Doyle, for Amanda B. Manee, owner, filed, April 7, 1923, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises east side of River avenue, 100 ft. south of East 167th street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 167th street and River avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered April 6, 1923, in acting on N. B. Application No. 74-23, reads:

"1. Erection of proposed garage for the storage of more than five motor vehicles in a business district is contrary to the provisions of the Building Zone Resolution."

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 125 ft. and a depth of 115 ft.; and

WHEREAS, it developed at the public hearing that the consents obtained were those of former owners and that the property had since changed hands and a legal question was involved as to the validity of the conveyed consents.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

449-24-BZ.
APPLICANT—Walter B. Wills, for Herman W. Bruning, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the alteration and conversion of occupancy from a stable to a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—63-63½ Schaeffer street, Brooklyn.

APPEARANCES—

For Applicant: Clifford Wills.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland and Connell... 5
Negative 0
Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:

(1149-24-BZ)

WHEREAS, Walter B. Wills, for Herman W. Bruning, owner, filed, September 19, 1924, an application, under the building zone resolution, to permit in a residence district the alteration and conversion of occupancy of a stable to a garage for the storage of more than five motor vehicles; premises 63-63½ Schaeffer street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Schaeffer street is a residence district and Bushwick avenue and Evergreen avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered June 11, 1924, in acting on Alteration Application No. 2563-24, reads:

"Proposed alteration of the two buildings used at present as stables, to two one-story brick garages to be occupied by three cars each, a use not accessory to the dwelling located on the front of the lot in a residence district, is contrary to Art. 2, Sect. 6, of the Zone Resolution."

and

WHEREAS, the existing buildings consist of a one-story frame structure and a two-story brick structure used as stables; having a total area of 50 ft. by 18 ft. located at the rear lot line of the plot. It is proposed to alter these two buildings to a one-story non-fireproof garage 50 ft. by 18 ft. in area for the storage of more than five motor vehicles; and

WHEREAS, the applicant filed 80 per cent consents of adjoining property owners, and the board deems the proposed alteration would be an improvement over the existing use and occupancy.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, on the basis of section 7-G, for a temporary period of two (2) years, restricting the structure to a depth of 18 ft. and a width of 50 ft. to be located on the rear of the premises, for the storage of six (6) automobiles of the pleasure car type, space for four (4) of which may be rented to persons not residing on the premises; that the rear and gable walls shall be unpierced throughout their entire height and length; there shall be no gasoline equipment installed and no signs of any nature displayed on premises;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within six (6) months and the building completed within eighteen (18) months from the date of this action.

Adjourned, 6:05 p. m.

WILLIAM J. O'GORMAN, Secretary.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday May 8, 1925, at 10 a. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

es shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above is a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and fire hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (2½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a Y-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line at the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] *two hundred (200) feet [in width].*

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each $62\frac{1}{2}$ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

re girders and joists are flush at the bottom, heads be spaced according to the general rule.

) For Conran* one (1) inch heads the distance between cent lines shall not exceed twenty (20) feet and the nce between the heads on each line shall not exceed six- (16) feet, the end heads on alternate lines being spaced more than four (4) feet from wall or partition. Where ers project below the under side of joists and divide ceiling into bays not exceeding twenty (20) feet in h, measured from center to center of girders, one line l be placed in the center of each bay. In bays exceed- twenty (20) feet in width at least two (2) lines shall nstalled in each bay and in no case shall the distance een adjacent lines exceed twenty (20) feet.

) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads distance between adjacent lines shall not exceed twenty- (25) feet and the distance between the head on each line l not exceed twenty (20) feet, the end head on alternate s being spaced not more than five (5) feet from wall partition. Where girders project below the under side oists and divide the ceiling into bays not exceeding twen- ve (25) feet in width, measured from center to center rders, one line shall be placed in the center of each bay. ays exceeding twenty-five (25) feet in width at least two lines shall be installed in each bay, and in no case shall distance between adjacent lines exceed twenty-five (25)

smooth Finish, Sheathed or Plastered Ceilings. Under oth finish, sheathed or plastered ceilings, in bays six (6) wide and over (measurements to be taken from center center of timber, girder or other projection or support ning the bay), sprinkler heads and lines shall be spaced follows:

a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of h bay for bays not exceeding twelve (12) feet in lth, and the distance between the heads on each line ll not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less n twenty-three (23) feet in width, shall contain at st two (2) lines of sprinklers; bays twenty-three (23) t in width or over shall have the lines therein not over (10) feet apart. In bays in excess of twelve (12) t in width, not more than one hundred (100) square t of ceiling area shall be allotted to any single head. (b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center each bay for bays not exceeding twenty (20) feet in lth, and the distance between the heads on each line all not exceed twenty (20) feet. Bays in excess of enty (20) feet in width shall contain at least two (2) es and in no case shall the distance between adjacent es exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch ads—

One line of sprinklers shall be placed in the center of ch bay for bays not exceeding twenty-five (25) feet in dth and the distance between the heads on each line all not exceed twenty-five (25) feet. Bays in excess twenty-five (25) feet in width shall contain at least o (2) lines and in no case shall the distance between acent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning ll construction shall apply as far as practicable. The le may be modified, however, the intent being to ar- nge the spacing of heads to protect the contents rather an the ceilings; but in no case shall the distance be- een a head on one line and a head on an adjacent e exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where prac- ticable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The dis- tance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdic- tion, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when con- struction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required of the administrative official having jurisdiction as to the advisability of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single line. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the opening are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser" forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the passway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or lined with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;
- On each floor, if independent floor control valves are used;

and
At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flow tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads40
- (b) For Conran* one (1) inch heads10
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 6

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads80
- (b) For Conran* one (1) inch heads20
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 12

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads50
- (b) For Conran* one (1) inch heads12
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 8

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Minutes of Meeting, Board of Appeals, May 5, 1925.
Minutes of Meeting, Board of Standards and Appeals, May 5, 1925.
Reserve Calendar.
Notice of Public Hearing.
Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.

Special meetings as listed in this Calendar.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

Board of Standards and Appeals, as listed in the Calendar.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, May 12, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, May 19, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALL OF CLERK'S CALENDAR.

Tuesday, May 12, 1925, at 2 p. m.,

Building Zone Cases.

292-25-BZ.	APPLICANT—Samuel Marer, owner. PREMISES—2621-2631 Aqueduct avenue, Borough of Th Bronx. TO PERMIT partly in a business district and partly in residence district the erection and maintenance of garage for the storage of more than five (5) motor vehicles.
249-25-BZ.	APPLICANT—Peter P. Smith, for Bay Ridge Saving Bank, owner. PREMISES—5315-5325 Fifth avenue, Brooklyn. TO PERMIT in a residence district extending from business district the erection and maintenance of business building to be used for banking purposes.
132-25-BZ.	APPLICANT—Samuel Cohen, for Sherman-Fulton Co Inc., owner. PREMISES—321 West 118th street, Manhattan. TO PERMIT in a residence district the alteration and conversion of occupancy from residence use to business use on the first story only.
715-24-BZ.	APPLICANT—John J. Dunnigan, for Leo Solicito, owner. PREMISES—811 East 224th street, Borough of Th Bronx. TO PERMIT in a residence district the maintenance of garage for the storage of four (4) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises.
1399-24-BZ.	APPLICANT—John J. Dunnigan, for Frederick P. Ballard, owner. PREMISES—708 East 216th street, Borough of Th Bronx. TO PERMIT partly in a business district and partly in residence district the alteration and change of occupancy from a stable and private garage to a garage for the storage of three (3) commercial and two (2) pleasure motor vehicles, two (2) spaces rented to persons not residing on the premises.
1413-24-BZ.	APPLICANT—Walter B. Wills, for M. Richman, owner. PREMISES—1180-1188 Myrtle avenue, Brooklyn. TO PERMIT partly in a business district and partly in residence district the erection and maintenance of garage for the storage of more than five (5) motor vehicles.
190-24-BZ.	APPLICANT—Edward V. Dodd, for Wm. F. Till, owner. PREMISES—2513-2519 Tilden avenue, Brooklyn. TO PERMIT partly in a residence district and partly in business district the erection and maintenance of garage for the storage of more than five (5) motor vehicles.

BOARD OF APPEALS.

Tuesday, May 12, 1925, at 10 a. m.

Appeals from Administrative Orders.

1175-24-A—628-642 West 45th street, Manhattan.

CALENDAR

- 969-24-A—126 Franklin street and 220-224 West Broadway, Manhattan.
- 1535-24-A—169-195 West street, Brooklyn.

THE RESOLUTION:

(1377-24-A)

WHEREAS, Croker Nat'l Fire Prev. Eng. Co., for Columbia University, owner, filed, November 20, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2920-2940 Broadway, Manhattan; and

MINUTES

WHEREAS, the order of the fire commissioner, dated March 29, 1924, reads:

"1. Remove all gasoline, the storage of which is prohibited by Section 112-2A, Chapter 10 (Section 114-2, Chapter 10) Code of Ordinances, from this building.

"2. Remove tank of gasoline storage system from these premises, or fill said tank with sand in the presence of an inspector of this department. Section 20, Chapter 12, Code of Ordinances.

"4. Discontinue the use of open flames in the same room or compartment where volatile inflammable liquids are kept or used. Section 9, Chapter 10, Code of Ordinances."

WHEREAS, the premises consist of a plot of ground upon which is located the buildings of Columbia University; the premises in question being a four-story engineering building, and also a vault located to the north thereof; buried 10 ft. beneath the floor of the vault is a tank (encased in concrete) for storage of gasoline, of 250 gallons capacity;

WHEREAS, appellant contends that the gasoline is required for tests of gas engines; that the tests are under the direct supervision of members of the teaching staff; that 100 gallons of gasoline used is properly stored and that in addition to the buried tank a portable gasoline tank is used also, in which is delivered the gasoline required for the engines, and contends further, in re Item No. 4, that an open flame is necessary in connection with laboratory work, but that it is separated from the gasoline storage by approximately 140 ft.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the capacity of the tank shall be limited to 250 gallons, buried below ground and encased in concrete; that a vent pipe be provided not less than 1 in. in diameter, vented to the outer air; and, that the fill pipe shall be encased in concrete; that the storage and use of the gasoline shall be restricted to the conduct of mechanical engineering course, and that the use and operation of the equipment shall be under the direction of qualified operators, members of the faculty.

5-25-A.

APPELLANT—Samuel Cohen, for Emma Rose, owner.
SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—22 East 57th street, Manhattan.

APPEARANCES—

For Appellant: Max Siegel.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon.....	7
Absent	0

THE RESOLUTION:

(65-25-A)

WHEREAS, Samuel Cohen, for Emma Rose, owner, filed, January 15, 1925, an appeal, with the board of appeals, from a decision of the superintendent of buildings, affecting premises 22 East 57th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered January 8, 1925, reads:

"Disapproved.

"Stairs should lead directly to street, as indicated on plans originally approved.

"All openings in the enclosure should be provided with fireproof, self-closing doors."

and

WHEREAS, the building is fireproof, six stories in height, 27 ft. by 105 ft. in area. OCCUPIED: 1st story, showrooms and store, 2 persons; 2nd story, showrooms and store, 5 persons; 3rd story, showroom, 1 person; 4th story, storage, no occupancy; 5th story, factory, 5 persons; 6th story, storage, no occupancy; the means of EGRESS consisting of two interior stairways extending from the 1st to top stories and terminating in the open store on the 1st story, the northerly stairway terminating about 17 ft. back from the entrance door; the main (north) stairway being enclosed in 4 in. terra cotta blocks with wooden doors at openings therein, excepting at the 3rd story, where there is no door at opening in the stair enclosure; and

WHEREAS, appellant contends, in view of the small occupancy, that the existing means of egress are adequate.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the appeal be and it hereby is denied.

133-25-A.

APPELLANT—Alfred W. Haiss, part owner of the Geo. Haiss Mfg. Co., Inc.

SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—375 Canal place, The Bronx.

APPEARANCES—

For Appellant: George Haiss and M. Cassis.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon.....	7
Negative	0
Absent	0

THE RESOLUTION:

(133-25-A)

WHEREAS, Alfred W. Haiss, for the George Haiss Mfg. Co., Inc., owner, filed, January 29, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 375 Canal place, The Bronx; and

WHEREAS, the decision of the fire commissioner, rendered January 28, 1925, reads:

"A re-examination of the plans show that the area of building is over 20,000 square feet according to Rule No. 8 A of the Board of Standards and Appeals.

"In any building not exceeding 40 ft. in height and 20,000 square feet in area, a four inch street supply system having a 4 in. direct connection to a street main fed two ways, etc.

"It will therefore be necessary to provide a tank with 20 ft. above the roof of at least 3500 gallons for standpipe system."

and

WHEREAS, the building is non-fireproof, one story and mezzanine (31 ft.) in height, having a frontage of 150 ft. on Canal place, a frontage of 125 ft. on Park avenue and a depth of 223 ft.; a total area of approximately 30,500 sq. ft.; OCCUPIED for the manufacture of heavy machinery, 65 persons in entire building; and

WHEREAS, appellant contends that the building is low in height, faces on two streets and that the standpipe system is supplied from an 8 in. city main in Canal place and a 6 in. city main in Park avenue, both mains having a hydrostatic pressure of 40 pounds per square inch.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, only so far as it affects the installation of gravity tank, on condition that a standpipe system shall be installed, separately connected on both street fronts to independent water mains, with not less than 4 in. siamese connections; and that the conduct, use and operation of the building shall remain unchanged.

MINUTES

141-25-A.

APPELLANT—Ernest D. Fieux, secretary for Runkel Brothers, Inc., lessee.

SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—445-451 West 30th street, Manhattan.

APPEARANCES—

For Appellant: Ernest D. Fieux and George P. Knight.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

THE RESOLUTION:

(141-25-A)

WHEREAS, Runkel Brothers, Inc., lessee (Ernest D. Fieux, secretary), filed, February 2, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 445-451 West 30th street, Manhattan; and

WHEREAS, the decision of the fire commissioner reads: "Burners must be of a type approved by the Board of Standards and Appeals."; and

WHEREAS, the building is fireproof, ten (10) stories in height, 100 ft. by 197 ft. 6 in. in area; OCCUPIED as a factory and office building; and

WHEREAS, a fuel oil burning system has been installed consisting of a 13,700 gallon and also a 16,600 gallon fuel oil tank, a "Petro" burner and the necessary pumps, valves, piping, etc., to make a complete installation; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules excepting that the burner is not an approved burner; and that the burner has been submitted to the board for approval; and requests a temporary permit, pending the approval of the burner.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of 90 days, at owner's risk, *on condition* that the installation shall comply with the fuel oil rules in all other respects.

219-25-A.

APPELLANT—Brooklyn Moulding Co., Inc., owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—8739-8765 126th street, Richmond Hill, Borough of Queens.

APPEARANCES—

For Appellant: George F. Doppel.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE RESOLUTION:

(219-25-A)

WHEREAS, Brooklyn Moulding Co., Inc., owner, filed, February 25, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 8739-8765 126th street, Richmond Hill, Borough of Queens; and

WHEREAS, the order of the fire commissioner reads:

"Provide sufficient yard hydrants with approved 2½ in. hose and nozzle as per rule 37 adopted by the Board of Standards and Appeals July 20th, 1923. Sec.

776, Greater New York Charter."; and

WHEREAS, the premises consist of a plot of ground having a frontage of 240 ft. on 126th street and a depth of 173 ft. (approximately 39,000 sq. ft. in area) upon which is located the plant of the Brooklyn Moulding Co., consisting of a one-story frame mill building, a one-story office, a brick boiler and engine room and several piles of lumber separated by 16 ft. driveways; and

WHEREAS, appellant contends that there are six city hydrants within 200 ft. of the plant; that water casks are distributed throughout the premises and that there is a supervised watchman service.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that four (4) driveways shall be maintained, not less than 16 ft. in width, direct from street, with cross-connecting driveways not less than 12 ft. wide; that no lumber pile shall be stacked within 3 ft. of rear lot line; that all aisles shall be kept free and unencumbered; that no lumber stack shall exceed a height of 15 ft.; and that the lumber yard otherwise shall be maintained in accordance with the rules and regulations of the fire department.

212-25-A.

APPELLANT—Samuel Rosenblum, for Friedman & Schwartzman, lessees.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—109 Greene street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon	7
Negative	0
Absent	0

THE RESOLUTION:

(212-25-A)

WHEREAS, Samuel Rosenblum, for Friedman & Schwartzman, lessee, filed, February 24, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 109 Greene street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 21, 1924, reads:

"1. Separate portion of premises where combustible fibres are stored from the remainder of the building by walls, floor and ceiling, protected by fire retarding material and with all floor openings similarly protected and constructed in a manner approved by the Fire Commissioner. Sec. 24-6, Chap. 12, Code of Ordinances.

"2. Discontinue the storage of combustible fibre in excess of 5 tons."; and

and

WHEREAS, the building is non-fireproof, five stories and cellar in height, 25 ft. by 95 ft. in area at the 1st story and 25 ft. by 85 ft. in area above. OCCUPIED: 1st story and cellar, storage of woolen clippings, 4 persons; 2nd story, paper box manufacture, 24 persons; 3rd story, trunk manufacturing, 1 person; 4th story, vacant at present; 5th story, manufacture of tassels, 12 persons; and

WHEREAS, appellant contends that the quantity of clippings stored is ten (10) tons; that the floors used for the woolen clippings are protected by an automatic sprinkler system with street connection; that a fire alarm system is installed and that the ceiling of the 1st story is protected with stamped metal and the stairway is separated from the 1st story by fire-resisting partitions.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 1, *on condition* that the stairhalls through-

MINUTES

shall be enclosed in fire-retarding partitions, any openings therein to be equipped with fireproof doors, according to rules of the board of standards and appeals; as to Item on condition that the quantity of material stored or maintained on these premises shall not exceed ten (10) tons, confined to basement and 1st story; and that the basement, 1st and 2nd stories shall be equipped with an approved sprinkler system.

88-24-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Gutta Pereha and Rubber Mfg. Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—37-65 Franklin avenue and 22-46 Skillman street, Brooklyn.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell... 5

Negative 0

Absent: Mr. Holland and Fire Chief Kenlon 2

THE RESOLUTION:

(1188-24-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Gutta Pereha & Rubber Mfg. Co., owner, filed, October 1, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 37-65 Franklin avenue and 22-46 Skillman street, Brooklyn; and WHEREAS, the order of the fire commissioner reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per sq. inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation fire department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with a sufficient feet of 2½ inch standard hose attached thereto."

and WHEREAS, the premises consist of a plot of ground having a frontage of 340 ft. on Franklin avenue and 340 ft. on Skillman street, upon which is located the plant of the Gutta Pereha & Rubber Mfg. Co., consisting of a series of on-fireproof, inter-connected two and three-story buildings, approximately 50,000 sq. ft. in area; OCCUPIED for the manufacture of rubber products, 164 persons above the 1st story; and

WHEREAS, appellant contends that the buildings are equipped with an automatic sprinkler system, fed from two 10,000 gallon storage tanks, and a 60,000 gallon suction tank and connected, also, by means of three connections to the city street mains; that there are two night watchmen on the premises; that the buildings are low in height and many driveways afford easy access to all of the structures on the premises.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, so long as present layout as to area, height and subdivisions of premises remain substantially unchanged, on condition that the entire plant shall be equipped with an approved two-source wet sprinkler system, according to the rules of the board of standards and appeals.

634-24-A.

APPELLANT—Emile Bauer, lessee.

SUBJECT—Application for extension of permit (re: appeal from order of fire commissioner).

PREMISES AFFECTED—9120 89th street, Woodhaven, Queens.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request for extension of permit. Extension of permit granted for 90 days.

THE VOTE TO EXTEND PERMIT—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Holland.... 5

Negative 0

Absent: Mr. Connell and Fire Chief Kenlon 2

THE RESOLUTION:

(634-24-A)

WHEREAS, Emile Bauer, lessee, filed, May 7, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 9120 89th street, Woodhaven, Borough of Queens; and

WHEREAS, the order of the fire commissioner, No. 28237-LC, dated April 17, 1924, reads:

"With reference to your application for a permit to store fuel oil at the above location, I regret to inform you that I am without power to grant such a permit for the reason that the storage of fuel oil at the above location is not in accordance with the rules adopted by the Board of Standards and Appeals on Nov. 6, 1919, amended January 18, 1924.

"You are therefore ordered to remove all fuel oil from the storage tank and discontinue the further storage and use of fuel oil at the above location."

and

WHEREAS, the building is frame, 2½ stories in height, 20 ft. by 40 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 55 gallon storage tank, piping and a Powerlight Burner; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules, excepting in that the burner is not an approved burner; and

WHEREAS, this appeal was granted by the board at its meeting February 3, 1925, on certain conditions, and appellant requested an extension of the time limit.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, for a temporary period of ninety (90) days, at the owner's risk, pending the action of the board of standards and appeals on the petition for approval of the Powerlight Burner.

1569-22-A.

APPELLANT—Richard Croker, Jr., owner.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—535-545 East 79th street, Manhattan.

APPEARANCES—

For Appellant: Richard Croker, Jr.

ACTION OF BOARD—Granted extension to December 31, 1925.

THE VOTE TO GRANT EXTENSION—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Holland.... 5

Negative 0

Absent: Mr. Connell and Fire Chief Kenlon 2

THE RESOLUTION:

(1569-22-A)

WHEREAS, Richard Croker, Jr., owner, filed, December 28, 1922, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 535-45 East 79th street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Provide a separate and distinct system of Automatic Sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances, adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

and

MINUTES

WHEREAS, the building is fireproof, eight stories (95 ft.) in height, 148 ft. by 102 ft. 2 in. in area; OCCUPIED as a tenant factory, with a total of 223 persons at present in the building, the 4th story being vacant; and

WHEREAS, appellant contends that the building is equipped with a standpipe, for which a new tank has recently been installed; that there is a fire alarm signal system and watchman service; that the building is isolated and has an approved safe occupancy of 92 persons per story, and that there has been no new fire hazard introduced into premises in the last four (4) years; and

WHEREAS, this appeal was granted by the board at its meeting March 9, 1923, on certain conditions, and appellant requested a modification of the time limit.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, holding the order in abeyance, in so far as it relates to the 3rd floor, until December 31, 1923, and, in so far as it relates to the other floors with woodworking occupancy, until December 31, 1925, *on condition* that the present standpipe, fire equipment, and fire alarm system with watchman patrol service, as well as the fire drill regulations, be maintained; and *on further condition* that the open gas jet on 3rd floor be enclosed with a metal screen not less than 5 ft. in height and 3 ft. in diameter.

BUILDING ZONE CASES.

1092-24-BZ.

APPLICANT—John W. Clancy, for Michael Naftal, owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles. (Previously denied by the board.)

THE RESOLUTION:

(188-25-BZ)

WHEREAS, Samuel Rosenblum, for William Perry, owner, filed, February 16, 1925, an application, under the building zone resolution, to permit in a residence district the change of occupancy of the 1st story of a building from residence use to an undertaking establishment; premises 248 West 132nd street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 5, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 132nd street is a residence district and Seventh avenue and Eighth avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings rendered January 26, 1925, reads:

"With reference to application for certificate of occupancy, we beg to state that this Bureau cannot issue

MINUTES

certificate for use of first story as funeral parlor for the reason that the premises is located in a residence district and the zoning resolution prohibits such business in a residence district.”;

and

WHEREAS, the existing building is of non-fireproof construction, three stories and basement in height, with a frontage of 18 ft. and a depth of 60 ft.; occupied as a dwelling; it is proposed to change the occupancy of the 1st story to a funeral parlor; and

WHEREAS, business of the same character exists on this block, and the application is supported by substantial consents of affected property owners within the block.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that there shall be no structural change or alteration to this building for the conduct of this use, namely, business office of a licensed embalmer, conducted by the owner of the premises living thereon; that there shall be no sign or advertising display other than a glass sign, approximately 10 in. by 18 in., secured to the window sash on the interior of the building, 1st story, restricted to the name and title of the owner conducting business on the premises.

197-25-BZ.

APPLICANT—John J. Dunnigan, for Elsie Levy, Clara Sarnof and Maurice Oppenheimer, by Mortimer Kraus, his attorney in fact, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1279-1285 Jerome avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.
For Opposition: None.

ACTION OF BOARD—Application granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon	7
Negative	0
Absent	0

THE RESOLUTION:

(197-25-BZ)

WHEREAS, John J. Dunnigan, for Elsie Levy, Clara Sarnof and M. Oppenheimer (by M. Kraus, his attorney in fact), owners, filed, February 17, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises 1279-1285 Jerome avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 5, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is a business district and Inwood avenue is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 13, 1925, in acting on N. B. Application No. 46-25, reads:

“1. Erection of proposed garage for storage of more than five motor vehicles in business district extending into unrestricted district is contrary to the provisions of the Building Zone Resolution.”;

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 100 ft. and a depth of 200 ft.; to be occupied as a garage for

the storage of more than five motor vehicles, the westerly half of the building is located in the unrestricted district; and

WHEREAS, the applicant supported his appeal under section 7-c and the board deemed the granting of the application warranted by the non-conforming uses already in existence in the street.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall not exceed one story in height on the Jerome avenue front; that the roof shall be of flat design and construction; that the gable walls shall be unpierced throughout their entire height and length; that there shall be not more than two vehicular entrances on the Jerome avenue front; that the street fronts of building on Jerome avenue and Inwood avenue shall be finished in face brick with architectural terra cotta or stone trimmings; that there shall be no roof sign erected or maintained on the premises; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

206-25-BZ.

APPLICANT—William F. Doyle, for James R. Connizaro, owner.

SUBJECT—Application (re: decision of fire commissioner) to permit in a business district the maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—94-96 Avenue U, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

THE RESOLUTION:

(206-25-BZ)

WHEREAS, William F. Doyle, for J. R. Connizaro, owner, filed, February 20, 1925, an application, under the building zone resolution, to permit in a business district the maintenance of a garage for the storage of more than five motor vehicles; premises 94-96 Avenue U, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 5, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Avenue U is a business district and West 9th street and West 10th street are residence districts; and

WHEREAS, the objection of the fire commissioner, rendered February 16, 1925, in acting on Alt. Application No. 253-25, reads:

“1. A garage for more than five cars may not be permitted in a business zone.”;

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 40 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the applicant filed 88 per cent of consents of property deemed affected of area fixed by board in support of his application under section 7-g, and the board deemed it a hardship, under the circumstances to deny the application.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application

MINUTES

be and it hereby is *granted on condition* that the existing structure shall not be extended in area, height or dimensions; that the rear and gable walls shall be unpierced, except for windows opening into property under the same control or ownership; that no roof signs shall be maintained on the premises; and that all necessary permits required shall be obtained within sixty days.

1369-24-BZ.

APPLICANT—Edward P. Doyle, for Ida Van Rooyan, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the change of occupancy from a garage for the storage of five (5) motor vehicles to a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1038-1040 Lafayette avenue, Brooklyn.

APPEARANCES—

For Applicant: Edward P. Doyle and Abraham Van Rooyan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Connell	1

THE RESOLUTION:

(1369-24-BZ)

WHEREAS, Edward P. Doyle, for Ida Van Rooyan, owner, filed, November 19, 1924, an application, under the building zone resolution, to permit in a business district the change of occupancy of a garage for the storage of five (5) motor vehicles to a garage for the storage of more than five (5) motor vehicles; premises 1038-1040 Lafayette avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 5, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Lafayette avenue and Reid avenue are business districts and Van Buren street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 17, 1924, in acting on Application No. 22705-24, reads:

"1. Proposition to use present five car garage for more than five cars contrary to Zone Resolution, Art. 4, Sec. 4, Par. 15. Therefore disapproved."

and

WHEREAS, the existing building is of non-fireproof construction, three stories in height, with a frontage of 50 ft. and a depth of 100 ft.; occupied as a garage for the storage of five automobiles, stable and storage building; it is proposed to convert the occupancy to a garage for more than five motor vehicles; and

WHEREAS, the applicant has supported his appeal under section 7-e of the building zone resolution and the board deemed that denial of his application would deprive him of the reasonable use of his property; and

WHEREAS, a stable for 17 horses existed on these premises under permits from duly authorized administration officials permitting its construction and maintenance.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the garage use area be restricted to and maintained exclusively on the 1st story; that the existing runway for horses be removed and the stable use above the 1st story discontinued; that there shall be no structural alteration other than installation of a stairway at the rear to the structure above, enclosed in fire-

retarding material; that any repairs conducted on the premises shall be restricted to such as are incidental to the conduct and operation of a garage; that there shall be no power-driven machinery used or maintained on the premises, and any repair work performed on premises shall be restricted to manual operation; that there shall be no sign or advertising display other than a flat wall sign on the front of the structure, and there shall be no roof sign installed; and that all necessary permits required shall be obtained within sixty days.

Absent: Mr. Connell and Fire Chief Kenlon .. 2

THE RESOLUTION:

(617-24-BZ)

WHEREAS, William F. Doyle, for Lantic Corporation, owner, filed, May 2, 1924, an application, under the building zone resolution, to permit the alteration and conversion of occupancy of building, used at present as a factory, stable and garage, located partly in a business district and partly in an unrestricted district, to a garage for the storage of more than five motor vehicles; premises 41-57 Third avenue, southeast corner of Atlantic avenue and Third avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 1, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Third avenue is a business district to within 100 ft. north of Pacific street; Atlantic avenue is a business district and Pacific street is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 4, 1924, in acting on Application No. 5827-24, reads:

"Proposed alteration and conversion of buildings, located partly in a business and partly in an unrestricted district, and used at present as a pie baking factory, stable and garage for more than five motor vehicles, is contrary to Art. 2, 3, 4 (a) of the Zone Resolution.";

and

WHEREAS, the existing building is of non-fireproof construction, two stories in height, with a frontage of 180 ft. and a depth of 100 ft.; it is proposed to alter the building and convert the occupancy from factory, stable and garage to garage for more than five motor vehicles; 80 ft. of the building being in the unrestricted district; and

WHEREAS, under the provisions of section 7, subdivision C, the board is empowered to act; and

WHEREAS, this application was granted by the board at its meeting, July 1, 1924, on certain conditions, and applicant requested a modification as to entrances on Third avenue.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be limited in height to a two-story structure above grade; that the rear wall be unpierced throughout its entire height and length; that any ramps installed shall start from the grade level shall be not less than 25 ft. from the walls of the building at street fronts; that the street elevations shall be finished in face brick with architectural terra cotta or stone trimmings; that there shall be no vehicular exit or entrance on the Third avenue front of the building, and the sills of any windows thereon shall be at least 5 ft. above sidewalk level and shall be glazed with translucent glass other than a plate glass show window on the Third avenue front at the Atlantic avenue end; that any skylights installed shall be glazed with plain glass, protected with wire guards above and below; that there shall be no advertising or signs of any description displayed on the Third avenue front of the building; that there shall be no roof signs permitted on any part of the structure; that not more than one pro-

jecting sign shall be permitted on the Atlantic avenue front of the building;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

968-24-BZ.

APPLICANT—Otto Henschel, for Michael Pellegrino and others, owners.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of buildings to be used for store purposes on 1st story and for dwelling use above.

PREMISES AFFECTED—1922-26, 1930 and 1932 Kings highway, 2110 Ocean avenue, Brooklyn.

APPEARANCES—

For Applicant: Charles P. Cannella.

For Opposition: None.

ACTION OF BOARD—Preamble of resolution corrected; return plans approved as in substantial compliance with requirements of resolution.

THE VOTE TO CORRECT PREAMBLE AND APPROVE PLANS—

Affirmative: Chairman Walsh, Messrs. Kennedy,

Dowd, Gunnison and Holland 5

Negative 0

Absent: Mr. Connell and Fire Chief Kenlon .. 2

THE RESOLUTION:

(968-24-BZ)

WHEREAS, Otto Henschel, for Michael Pellegrino and others, owners, filed, July 24, 1924, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of buildings to be used for store purposes on the 1st story and for dwelling use above; premises 1922-1926, 1930 and 1932 Kings highway, and 2110 Ocean avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, February 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Kings highway, south side and to a point 100 ft. west of Ocean avenue, is a residence district, the remainder of Kings highway at this point is a business district, and Ocean avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 10, 1924, in acting on Applications No. 1366, 1367, 1368 and 1369 reads:

"Proposed three story brick building to be occupied as a store on the 1st floor, one family on the 2nd floor and one family on the 3rd floor, in a residence district, is contrary to Art. II, Sec. 3 of the Zone Resolution.";

and

WHEREAS, this application was granted by the board at its meeting, February 17, 1925, the preamble in the resolution containing a description of the buildings as tentatively proposed. This description having no bearing on the zoning question involved, and applicant now submits a plan and elevation for approval in accordance with resolution adopted; and

WHEREAS, the board deemed that there would be hardship in preventing applicant from using the Kings highway front for stores owing to the business use on this street.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, restricted to business use of retail stores on the ground floor only, and only so far as it affects the frontage facing on Kings highway, *on condition* that the upper stories of the building shall be restricted to dwelling use and occupancy; the store fronts or show windows shall start at a point not less than 12 in. from the Ocean avenue building line; that there shall be no stores or business use evidenced or displayed on the Ocean avenue

MINUTES

front of the structure; that there shall be no advertising signs or display of any nature or description on the Ocean avenue front, and that any advertising signs or display on the Kings highway front shall be restricted to lettering placed directly on show windows of the store fronts; and that there shall be no entrance on the Ocean avenue front other than those required for the dwelling use above; that the exterior of the street walls on Kings highway and Ocean avenue front, other than the show windows of the stores on the Kings highway front, shall be finished in face brick with architectural terra cotta or natural stone trimmings; that any windows on the Ocean avenue front, except those opening directly to living apartments, shall have sills not less than 6 ft. above grade; and *further granted on condition*

that the requirements of the building zone resolution shall be complied with in all other respects as to rear yard and area requirements; and

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action; and

Resolved, further, that the board does hereby *approve* the drawings submitted this date as complying with the terms of the resolution.

Adjourned 1.30 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

MINUTES

BOARD OF STANDARDS AND APPEALS

REGULAR MEETING.

TUESDAY AFTERNOON, MAY 5, 1925.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville, Kleinert, Moore and McDermott.

The minutes of the regular meeting of the board of standards and appeals held on Tuesday afternoon, April 21st, 1925, were approved as printed in the Bulletin, No. 17, Vol. X.

PETITIONS FOR VARIATIONS.

1102-24-S.

PETITIONER—Arthur Greenbaum, for Abram I. Kaplan, lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—251 Fifth avenue and 1 East 28th street, Manhattan.

APPEARANCES—

For Petitioner: John F. Keating.

ACTION OF BOARD—Laid over to May 19, 1925, at 2 p. m., on request of petitioner's representative.

1332-24-S.

PETITIONER—Edward P. Doyle, for Unity Fee Co., Inc., owner.

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—101-103 West 42nd street and 737-745 Sixth avenue, Manhattan.

APPEARANCES—

For Petitioner: Edward P. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Laid over to June 16, 1925, at 2 p. m., subject to reduction of factory occupancy.

80-25-S.

PETITIONER—Samuel Cohen, for Michael C. A. Formato, lessee.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—23 West 56th street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Laid over to May 19, 1925, at 2 p. m.

28-25-S.

PETITIONER—Samuel Cohen, for Alice Hoffman, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—17 East 54th street, Manhattan.

APPEARANCES—

For Petitioner: None.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Laid over to May 19, 1925, at 2 p. m.

178-25-S.

PETITIONER—Charles Mayer, for Samuel Weil, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—391 Washington street, Manhattan.

APPEARANCES—

For Petitioner: None.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Laid over to May 19, 1925, at 2 p. m., for final hearing.

718-18-S.

PETITIONER—Harold L. Young, for Lazarus Levy, owner.

SUBJECT—Application for reopening—variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—17-23 East Broadway, Manhattan.

APPEARANCES—

For Petitioner: William C. Sommerfeld.

ACTION OF BOARD—Laid over to May 19, 1925, at 2 p. m., on request of petitioner.

1418-24-S.

PETITIONER—Irving Finkelstein, for Beno Realty Company, owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—20 East 31st street, Manhattan.

APPEARANCES—

For Petitioner: Irving Finkelstein.

PETITIONER—Samuel Rosenblum, for Fise Realty Co., Inc., lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

REMISES AFFECTED—16 West 31st street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Superintendents Brady, Reville, Kleinert, Moore and McDermott 9

Negative 0

Absent: Messrs. Kennedy, Connell, Fire Chief Kenlon and Deputy Fire Commissioner Hannon 4

THE RESOLUTION:

(192-25-S)

WHEREAS, Samuel Rosenblum, for Fise Realty Co., Inc., lessee, filed, February 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 16 West 31st street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 9, 1924, reads:

"Order No. 58820-LD:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"NOTE: Among the defects noted on this fire escape are the following: No fireproof passageway from termination of fire escape to street."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 56 ft. in area with a three-story extension at the rear east. OCCUPIED: 1st story, store; 2nd story, salesroom, 2 persons; 3rd story, vacant at present; 4th story, manufacturing of buttons, 25 persons; EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway, extending from the 1st story to the roof, enclosed in fire-resisting partitions with fireproof doors at openings; a fire escape with fireproof windows along the course thereof on the rear of the building, extending from the roof to the 2nd story balcony, with iron stair to yard, with egress from the termination of fire escape by means of open yard of adjoining premises to east under same and single control; and through store in 1st story of the building to street; ROOFS of adjoining buildings to east same level, to west, one story higher; and

WHEREAS, petitioner contends, in view of the light occupancy of the premises, that the existing egress from the termination of fire escape be accepted.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the egress from the termination of the fire escape, on condition that a standard approved fire escape shall be erected, with 60 degree stairs connecting balconies, with 45 degree iron stairs to yard, egress therefrom through an open yard to the west, both properties in the same and single control; egress from yard through door to street, with plain glass panel therein; granted only so long as con-

conies, with 45 degree iron stairs to yard, egress therefrom through an open yard to the east, both properties in the same and single control; egress from yard through door to street, with plain glass panel therein; granted only so long as conditions as to occupancy and use otherwise remain substantially unchanged.

193-25-S.

PETITIONER—Samuel Rosenblum, for Fise Realty Co., Inc., lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—14 West 31st street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Superintendents Brady, Reville, Kleinert, Moore and McDermott 9

Negative 0

Absent: Messrs. Kennedy, Connell, Fire Chief Kenlon and Deputy Fire Commissioner Hannon 4

THE RESOLUTION:

(193-25-S)

WHEREAS, Samuel Rosenblum, for Fise Realty Co., Inc., lessee, filed, February 17, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 14 West 31st street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 28, 1924, reads:

"Order No. 61944-LD:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"NOTE: Among the defects noted are the following:

"No fireproof passageway from termination of fire escape to street."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 64 ft. in area; OCCUPIED as a tenant factory, 50 persons above the 1st story; EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway extending from the 1st story to the roof, enclosed in fire-resisting partitions with fireproof doors at openings; a fire escape with fireproof windows along the course thereof on the rear of the building extending from roof to yard, with egress from the termination of fire escape by means of open yard to premises to west, under same and single control; ROOFS of adjoining buildings to west same level, to east seven stories higher.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects egress from the termination of fire escape, on condition that a standard approved fire escape shall be erected, with 60 degree stairs connecting balconies, with 45 degree iron stairs to yard, egress therefrom through an open yard to the west, both properties in the same and single control; egress from yard through door to street, with plain glass panel therein; granted only so long as con-

MINUTES

ditions as to occupancy and use otherwise remain substantially unchanged.

209-25-S.

PETITIONER—F. P. Keniston, for Peter Pressman, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—427 Fourth avenue, Manhattan.

APPEARANCES—

For Petitioner: F. P. Keniston.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell, Superintendents Brady, Reville, Kleinert, Moore and McDermott 10

Negative 0

Absent: Mr. Kennedy, Fire Chief Kenlon and Deputy Fire Commissioner Hannon 3

THE RESOLUTION:

(209-25-S)

WHEREAS, F. P. Keniston, for Peter Pressman, owner, filed, February 21, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 427 Fourth avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 26, 1925, reads:

"Order No. 71178-LD:

"1. Extend the interior stairway at the north side of building to the roof, as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories in height, 21 ft. by 80 ft. in area at the 1st story and 21 ft. by 40 ft. in area above; OCCUPIED as a tenant factory, 19 persons above the 1st story. EXITS: An interior wooden stairway extending from the 1st story to the top story, with fixed iron ladder to scuttle in the roof, enclosed in wood lath and plaster partitions with wooden doors at the openings; a fire escape with fireproof windows along the course thereof on the rear of the building, extending from the roof to the 2nd story balcony, with iron bridge to a counterbalanced stair leading to West 29th street; ROOFS of adjoining buildings are at the same level; and

WHEREAS, petitioner contends that a rearrangement of the top story, such as would be necessary to continue the stairway to the roof, would so reduce the limited space in said story as to render it valueless, and requests, in view of the light occupancy, that the existing means of exit be accepted.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that a double rung iron ladder shall be provided from the top story hall enclosure to scuttle in roof; granted only so long as conditions as to occupancy and use otherwise remain unchanged.

211-25-S.

PETITIONER—Samuel Rosenblum, for John Stitch, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

Absent: Mr. Kennedy, Fire Chief Kenlon and Deputy Fire Commissioner Hannon

THE RESOLUTION:

(211-25-S)

WHEREAS, Samuel Rosenblum, for John Stitch, owner, filed, February 24, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 20 Starr street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated February 2, 1925, reads:

"Order No. 71552-LD:

"1. Arrange bars on windows on cellar story, north, east, south and west sides of building, so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress, as per Section 272 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, three stories and cellar in height, 30 ft. by 95 ft. in area. OCCUPIED: Cellar, storage, trouser material, no regular occupancy; 1st, 2nd and 3rd stories, tenant factory, 55 persons above the 1st story; EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway extending from the 1st story to the top story, enclosed in wood, stamped metal covered partitions, with fireproof doors at the opening a fire escape on the south side of the building extending from the top story to alleyway, with egress from termination of fire escape by means of alleyway to street; the alleyway extends along the southerly and easterly sides of the premises at the same level as the cellar story, and the south wall of the cellar twelve 2 ft. 6 in. by 2 ft. 6 in. windows, approximately 6 ft. above the floor level, and the easterly wall of the cellar there are four 2 ft. 6 in. by 4 ft. windows, approximately 3 ft. above the floor level. ROOFS of adjoining buildings to north one story lower open court to south; and

WHEREAS, petitioner proposes to brick up the windows on the north wall, and contends that the windows in the southerly wall are not available as exits and that approximately to the windows in the east wall there is a door to the alley and that there are provided other means of exit from the cellar.

Resolved, that the board of standards and appeals do hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted only so far as it affects the windows, 2 ft. 6 in. by 2 ft. 6 in. approximately 6 ft. from the floor, and windows on front and rear, on condition that all other openings in the gable walls shall be bricked up, and that an exit door, opening out on the front and rear, shall be provided and maintained granted only so long as the existing occupancy and use shall remain substantially unchanged.

THE RESOLUTION:

(224-25-S)

WHEREAS, Samuel Rosenblum, for Elizabeth Chesebrough, owner, filed, February 25, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 38 Great Jones street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 3, 1925, reads:

"Order No. 71651-LD:

"1. Provide safe and unobstructed egress from the lower termination of the fire escape at rear of building by constructing a fireproof passageway with an unobstructed width of at least 3 feet throughout, leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having communication with the street, as per Section 273 of the Labor Law."

and

WHEREAS, the building is non-fireproof, four stories in height, 20 ft. by 64 ft. in area; OCCUPIED as a tenant factory, 25 persons above the 1st story. EXITS: An interior wooden stairway extending from the 1st story to the roof, enclosed in wood lath and plaster partitions, with metal-covered wooden doors at the openings; a 60 degree fire escape with fireproof windows along the course thereof on the rear of the building extending from the roof to yard, with egress from the termination of fire escape by means of open yards of the adjoining premises (under same ownership) to the east; ROOFS of adjoining buildings to east two stories higher, to west same level; and

WHEREAS, petitioner requests, in view of the light occupancy, that the existing egress from the termination of the fire escape be accepted.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the egress from the termination of the fire escape at the yard level, on condition that a standard fire escape shall be maintained on the rear of the building from the yard to the roof, with egress from termination through four (4) yards to the west, maintained open and unobstructed; granted only so long as the occupancy and use remain substantially unchanged.

126-25-S.

PETITIONER—Samuel Rosenblum, for Maybelle E. Manning, lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—14 East 55th Street, Manhattan.

APPEARANCES—

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 11
Negative 0
Absent: Mr. Dowd and Fire Chief Kenlon.. 2

THE RESOLUTION:

(126-25-S)

WHEREAS, Samuel Rosenblum, for Maybelle E. Manning, lessee, filed, January 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 14 East 55th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 30, 1924, reads:

"1. Provide an additional means of exit from 6th story in accordance with Section 271 of the Labor Law.

"2. Provide an outside iron balcony fire escape on the rear of building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 deg., extending from ground to roof, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals * * *.

"3. Extend the north interior stairway at west side of building to the roof, as per section 271 of the Labor Law. Said extension and the landings and passageways connecting therewith to be enclosed on all sides with partitions of fire resisting material extending at least 3 ft. above the roof, as per section 271 and 272 of the Labor Law and rule 2 of the Industrial Code.

"4. Enclose the north interior stairway at the west side of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the last story to 3 ft. above the roof, constructed as per section 271 of the Labor Law. * * *."

and

WHEREAS, this case was amended on April 27, 1925, to include the objection of the superintendent of buildings, dated April 25, 1925, which reads:

"3. Exit facilities should comply with Sec. 271 of the Labor Law."

and

WHEREAS, the building is non-fireproof, five stories and pent house in height, 23 ft. by 100 ft. 5 in. in area. OCCUPIED: Basement, manufacture of dresses, 20 persons; 1st story, showrooms and manufacturing, 3 persons; 2nd story, manufacture of millinery, 5 persons; upper stories, dwellings, 2 persons per story. EXITS: An interior fireproof stairway, extending from the 1st story to pent house, enclosed in fireproof partitions with fire doors at the openings; an interior wooden stairway extending from the 1st to the 5th story, enclosed in wood lath and plaster partitions with wooden doors at openings; and an accommodation stairway at the rear of the building, extending from the basement to the 2nd story; ROOFS of adjoining buildings to east same level, to west 4 ft. higher; and

WHEREAS, petitioner contends that the basis of the order is the fact that 5 persons are engaged at manufacturing on the 2nd story and that there are available for these 5 persons three stairways, one being fireproof, and further contends that the existing means of exit are adequate, in view of the light occupancy of the premises.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that a fire escape shall be provided on the rear, from yard of adjoining premises to the east to the 6th story, with 60 degree connecting stairs, and fireproof casement doors, opening out at the 1st and 2nd story balconies, with egress from yard into building to east, and egress to same yard to east from rear of basement; granted only so long as conditions as to occupancy and use remain unchanged.

"No. 3. No fireproof passageway from termination leading to street.";

and

WHEREAS, the building is non-fireproof, four stories and basement in height, 25 ft. by 88 ft. in area; OCCUPIED as a tenant factory, 12 persons on the 2nd story, 13 persons on the 3rd story and the 4th story is vacant at present. EXITS: An interior wooden stairway extending from the 1st story to the top story; enclosed in wooden stud and plaster partitions, with wooden doors at openings; a fire escape on the rear of the building extending from the roof to the yard, with EGRESS from the termination of fire escape by means of gate in fence giving access to open yards to the west; and ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that adequate means of exit from the termination of the fire escape are afforded by the adjacent open yards and also by means of the fire escapes terminating thereon.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects egress from termination of fire escape, *on condition* that a balcony bridge shall be provided at the 2nd story, connecting with balcony of fire escape of 41 East 8th street, and that all fences at yard level shall be removed and an open and unobstructed yard shall be maintained from 30 East 9th street between 26, 28, 30 East 9th street and 37, 39, 41 East 8th street; the fire escape in all other respects shall conform to the requirements of the labor law and the rules of the board of standards and appeals; *granted* only so long as conditions as to use and occupancy shall remain substantially unchanged; the occupancy not to exceed twenty-five (25) persons above the 1st story.

1249-24-S.

PETITIONER—Croker National Fire Prevention Engineering Co., for Cantor & Angel, Inc., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—157-161 West 29th street, Manhattan.

APPEARANCES—

For Petitioner: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 11

Negative 0

Absent: Mr. Dowd and Fire Chief Kenlon.. 2

THE RESOLUTION:

(1249-24-S)

WHEREAS, Croker National Fire Prevention Engineering Company, for Cantor & Angel, Inc., owners, filed, October 21, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 157-161 West 29th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 24, 1924, reads:

"Order No. 59775-LD:

"1. Arrange the exterior screened stairway and the openings leading thereto so that same are in compliance with the provisions of Section 268 of the Labor Law * * *.

"Among the defects noted on this exterior screened stairway are the following:

"No fireproof passageway to street.";

and

WHEREAS, the building is non-fireproof, seven stories in height, 65 ft. by 97 ft., irregular in area; OCCUPIED as a tenant factory, 161 persons above the 1st story; EQUIPPED with a sprinkler system. EXITS: An interior fireproof stairway extending from the 1st story to the roof, enclosed in fire-retarded partitions with fire doors at openings; a fire escape with fireproof windows along the course thereof on the rear of the building, extending from the roof to the 2nd story balcony, with egress from the termination of the fire escape by means of an iron bridge connecting the 2nd story balcony with the fire escape on the building to the west; ROOFS of adjoining building to west two stories lower, to east two stories lower; and

WHEREAS, petitioner proposes to connect the 2nd story balcony by means of an iron bridge across the 1st story extension, with the fire escape on the premises to the rear, said premises at rear having an enclosed fireproof passageway leading directly from foot of the fire escape to 30th street.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the egress from the termination of the fire escape, *on condition* that the fire escape otherwise complies with the labor law and the rules of the board of standards and appeals, *on condition* that a balcony bridge shall be provided at the termination of the roof at the 1st story extension, extending to the premises in the rear, connected to fire escape of premises to the west, with termination therefrom to yard; *granted* only so long as conditions as to occupancy and use remain substantially unchanged.

172-25-S.

PETITIONER—George E. Strehan, for Houbigant, Inc., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—535-547 West 45th street, Manhattan.

APPEARANCES—

For Petitioner: George E. Strehan.

MINUTES

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 11
Negative 0
Absent: Mr. Dowd and Fire Chief Kenlon.. 2

THE RESOLUTION:

(172-25-S)

WHEREAS, George E. Strehan, for Houbigant, Inc., owner, filed, February 10, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 535-547 West 45th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered January 27, 1925, reads:

"3. Wood sash, door and window frames and base not permitted in fireproof partitions erected for offices on 2nd floor; building is over 100 ft. in height."

and

WHEREAS, the building is fireproof, eleven stories in height, 125 ft. by 100 ft. 5 in. in area in the 1st story and 125 ft. by 90 ft. 5 in. in area above; OCCUPIED as a factory for the bottling, boxing and labeling of perfumes, with a total of 1,125 persons in the entire building, the building being equipped with a sprinkler system and a fire alarm signal system, the means of egress consisting of an interior fireproof stairway at east side of building extending from the 1st story to the roof and a fire tower at the westerly side; and

WHEREAS, it is requested that permission be granted to install on the 2nd story only wood doors, wood base and wood and glass transoms on the fireproof partitions subdividing the private offices, to install wood flooring in six of the private offices used as sample rooms and to erect 400 ft. of wood and glass dwarf partitions 7 ft. 2½ in. high, subdividing the general office space; and

WHEREAS, petitioner contends that this 2nd or office floor is an isolated unit cut off from the factory portion of the building; that the factory occupancy has a low fire hazard; that the decoration treatment of the office and sales room is based on the use of wood trim; that under the building code the structural provisions relating to each class of occupancy are applied to such parts of the building as fall within that class of occupancy and that under the building code partitions of wood and glass of a temporary character used to subdivide panes within fireproof partitions and walls are permitted and that all other partitions and trim throughout the building except in the floor mentioned are fireproof.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the temporary use as office fixtures, restricted to the 2nd story only, on condition that the use of entire 2nd story shall be restricted to executive offices, subdivided and finished in accordance with plan filed in the case, and on further condition that the entire premises shall be equipped with an approved sprinkler system.

1339-24-S.

PETITIONER—Anna Riseili, owner.

SUBJECT—Application for reopening (re: variation of labor law as cited in order of health commissioner).

PREMISES AFFECTED—444 East 13th street, Manhattan.

APPEARANCES—

For Petitioner: John M. Lewis.

ACTION OF BOARD—Petition granted.

THE VOTE—

Affirmative: Messrs. Kennedy, Gunnison, Holland, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 9
Negative: Chairman Walsh and Mr. Connell .. 2
Absent: Mr. Dowd and Fire Chief Kenlon.. 2

THE RESOLUTION:

(1339-24-S)

WHEREAS, Anna Riseili, owner, filed, November 12, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the department of health, affecting premises 444 East 13th street, Manhattan; and

WHEREAS, the decision of the department of health, rendered September 23, 1924, reads:

"At a meeting of the Board of Health of the Department of Health of The City of New York held Sept. 23, 1924, your application for a sanitary certificate for a cellar bakery at 444 East 13th Street, Manhattan, was denied."

and

WHEREAS, the building is non-fireproof, six stories and basement in height, 24.3 ft. by 90.3 ft. in area; OCCUPIED, cellar, bakery, upper stories occupied as dwellings; the height of bakery from floor to ceiling being 8 ft.; the ceiling being at the curb level and the floor is at the same level as the side court; the means of ventilation consisting of one window opening to the side court and one to front area, also two ventilating flues; and

WHEREAS, this petition was denied by the board at the meeting held on January 13, 1925, and reopened by vote of the board on April 21, 1925; and

WHEREAS, petitioner contends that the bakery has been used, as such, continuously since September, 1906, and has filed an affidavit from the owner to that effect and also a letter from the superintendent of buildings stating that the oven under the sidewalk in front of the building was completed according to the approved plans on September 29, 1906.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted.

APPLIANCES SUBMITTED FOR APPROVAL.

804-19-SA.

PETITIONER—John J. Walsh.

SUBJECT—Interpretation in relation to the Davey Automatic Fire Escape.

APPEARANCES—None.

ACTION OF BOARD—Interpreted resolution of November 25, 1919.

THE VOTE TO APPROVE INTERPRETATION—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 11

Negative 0

Absent: Mr. Dowd and Fire Chief Kenlon 2

THE INTERPRETATION:

In the matter of the request for an interpretation of the action of the board under date of November 25, 1919, Cal. No. 804-19-S, affecting the approval of the Davey Automatic Fire Escape, the board deems that the approval was solely as to the mechanical design and construction of the device and its availability for emergency use for escape in an exigency, and the use of same shall be in addition to, and not in substitution of, any other requirement of law for a regulation fire escape or other means of exit.

1361-24-SA.

PETITIONER—Caloril Burner Corporation.

SUBJECT—Approval of Caloril Burner, Type AA.

APPEARANCES—

For Petitioner: E. A. Pierce.

For Administration: None.

MINUTES

*CORRECTION.

The minutes of the meeting of the board of standards and appeals held April 14, 1925, as they appeared in Bulletin No. 16, Vol. X, are hereby corrected to read as follows: (61-23-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Art Ivory Manufacturing Co., Inc., lessee, filed, January 17, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 1078 Villoughby avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated January 4, 1923, reads:

"1. Surrender to the bearer, Permit No. 74336, issued June 24, 1922, to expire Feb. 5, 1923, authorizing the storage of five thousand pounds of nitro-cellulose, 275 pounds dip, at the above premises * * *.

"No permit for the storage of nitro-cellulose products, except in quantities less than 100 lbs. for purposes of manufacture of articles therefrom, shall be issued for any building which is situated within 50 ft. of the nearest wall of any building occupied as a school, theatre or other place of Public Amusement or Assembly.

"2. You are therefore ordered forthwith to reduce the quantity of nitro-cellulose in the form of blocks, slabs, sheets, rods, tubes and other shapes, to less than 100 lbs.";

and WHEREAS, the building is fireproof, three stories in height, 80 ft. by 80 ft. in area; OCCUPIED for the manufacture of celluloid articles, with a total of 106 persons in the entire

*Correction—Word "brick" in line 48 changed to word "fireproof."

building; the building being equipped with a sprinkler system, and the celluloid is stored in a fireproof vault in the basement; and

WHEREAS, on March 6, 1923, the board granted a modification of these orders on condition that the storage of raw celluloid be confined to a fireproof vault in the basement, the enclosing walls of which shall be increased from 12 in. to 18 in. in thickness; that the opening to the vault be protected with double self-closing fireproof doors; that the vault be equipped with not less than twelve sprinkler heads; and granted so long as conditions remain substantially unchanged, but for a period not extending beyond May 1, 1925, and this case was reopened by vote of the board on March 24, 1925; and

WHEREAS, appellant contends inability to obtain a suitable location to move to, and proposes to remove the vault to a position further away from the church wall, and proposes also to provide fireproof windows for all openings within 50 ft. of the church walls.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that all celluloid shall be stored in a fireproof vault, the walls of which shall be not less than 18 in. thick, located in the basement, not less than 42 ft. from the adjoining building immediately in the rear; that the conduct and occupancy of the premises shall comply with the ordinance and the rules of the fire department for the operation and use of celluloid occupancy; that all openings in the rear, and gable wall, west of the vault, shall be equipped with fireproof windows, glazed with wire glass; and that all jig saws throughout the premises shall be provided with a water supply, equipped with a quick-opening valve.

MINUTES

*CORRECTION.

The minutes of the meeting of the board of standards and appeals held Tuesday afternoon, October 30, 1923, as they appeared in Bulletin No. 45, Vol. VIII, are hereby corrected to read as follows:

(809-23-S)

WHEREAS, John A. McCoocy, Jr., representing Croker Nat'l Fire Prev. Eng. Co., for Pyramid Playing Card Co., owner, filed, June 25, 1923, a petition, with the board of standards and appeals, for variation from the requirements

*Correction—Words "and connecting stairs if not more than 50 degrees" omitted in line 42.

of the labor law, as cited in an order of the fire commissioner, affecting premises 351-3 Jay street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 28, 1922, reads:

"1. Arrange the fire escape on the rear of building and the opening leading thereto and the windows opening on the course thereof * * *.

"NOTE: Among the defects noted on this fire escape are the following:

"No 45 degree connecting stairways between balconies.

MINUTES

"No passageway from termination of fire escape to street.";
and

WHEREAS, the building is non-fireproof, seven stories in height, 50 ft. by 100 ft. in area; equipped with sprinkler system. EXITS: One interior stairway enclosed in a wooden partition, metal covered on loft side, with metal covered doors at openings; two sub-standard fire escapes, and a fire escape with fire doors and windows along course on rear of building extending from roof to 1st story with EGRESS consisting of a stairway from the 1st story balcony up to the roof of a one-story garage at the rear; occupied as tenant factory, 81 persons in the entire building; and

WHEREAS, petitioner requests that owing to light occu-

pancy of the building and the hardship involved, the existing stairway be accepted as adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted on condition* that an iron stairs shall be provided from the termination of the rear fire escape on the 2nd story to the roof of the garage, the ceiling of which is fire retarded, and that a portable iron ladder shall be provided on the front of the roof of garage and counterbalanced drop ladder in guides shall be provided to the fire escape on front of building, and that all windows on the course of the fire escape shall be made self-closing with the exception of the top story; *granted* only so long as the conditions as to occupancy and use remain unchanged.

MINUTES

*CORRECTION.

The minutes of the meeting of the Board of Appeals held Tuesday morning, April 28, 1925, as they appeared in Bulletin No. 18, Vol. X, are hereby corrected to read as follows:

(586-20-A)

WHEREAS, Henry Meinken, executor, for Estate of Henry Meinken, owner, filed, July 31, 1920, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 428-30 West 14th street and 427-29 West 13th street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Provide a separate and distinct system of automatic sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919.";

and

WHEREAS, the appeal was dismissed by the board at its

**Correction—Words "order of the fire commissioner" substituted for words "decision of the superintendent of buildings" in line 7.*

meeting, September 28, 1920, for lack of prosecution, and appellant requested a reopening of case on the ground that the delay in prosecuting had been caused by death in family of appellant; and

WHEREAS, the building is non-fireproof, five stories and basement in height, 50 ft. by 206 ft. 6 in. in area. OCCUPIED: 1st story, stores; 2nd story, hotel supplies and marbling paper, 15 persons; 3rd story, paper storage and laundry, 24 persons; 4th story, laundry and mirrors, 24 persons; 5th story, paper box manufacturing, 33 persons; and

WHEREAS, appellant contends that there is no hazardous occupancy and that as the building faces on two (2) streets there is ample means for fighting fire; and

WHEREAS, this appeal was granted by the board at its meeting, May 15, 1923, on certain conditions, and it appears that these conditions have been violated, and that an extra hazardous condition exists; on motion to rescind by Fire Chief Kenlon, the board having power under rule No. 7 of rules of procedure adopted by the board of standards and appeals.

Resolved, that the action of the board under date of May 25, 1923, granting the appeal, be *rescinded*, and the order of the fire commissioner *affirmed*, and the appeal be and it hereby is *denied*.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, May 29, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads40
- (b) For Conran* one (1) inch heads10
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads6

Where equipped with an approved quick-opening device, the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads80
- (b) For Conran* one (1) inch heads20
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads12

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads50
- (b) For Conran* one (1) inch heads12
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads8

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Cal-
endar.
All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013, Tuesday, May 19, 1925,
at 2 o'clock. At this call each case is set for hearing
on a definite day.

The next subsequent Call of the Calendar will be on
Tuesday, May 26, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in
connection with which court proceedings are pending or in
progress, nor accepted that are not filed within twenty
days from the date of the action of the Administrative Of-
ficial.

Any communication purporting to be an appeal, applica-
tion or petition shall be regarded as a mere notice of in-
tention to seek relief until it is filed on the form required
by the rules of this board.

Upon receipt of any such communication the writer will
be supplied with the official forms for presenting his ap-
peal, application or petition, and if he fails to supply the
data required thereon, within twenty days, his case may be
dismissed for lack of prosecution.

At the time of filing an application, the appellant or peti-
tioner shall forward a signed notice of appeal addressed
to the administrative official (either superintendent of build-
ings or fire commissioner) and file with this board a dupli-
cate of said notice.

Petitioners are advised that their plans must indicate the
points of the compass so as to establish the true location and
position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and
expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

969-24-A.

APPELLANT—Grinnell Co., Inc., for Walter Shuttleworth, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—126 Franklin street and 200-224 West Broadway, Manhattan.

APPEARANCES—

For Appellant: None.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Laid over to June 9, 1925, at 10 a. m., on request of appellant's representative, pending amendments to sprinkler rules.

16-24-A.

APPELLANT—David M. Jones, for Philip Wald and S. Buchman, owners.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1342 Park avenue, Manhattan.

APPEARANCES—

For Appellant: David M. Jones.

ACTION OF BOARD—Laid over to June 9, 1925, at 10 a. m., for final disposition, on request of appellant.

1177-24-A.

APPELLANT—Street & Smith Corporation, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—79-89 Seventh avenue, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Laid over to afternoon meeting of May 12th, on request of appellant's representative.

339-25-A.

APPELLANT—Joseph L. Burke, for Sinclair Refining Co., lessee.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—West side of Kemble avenue 1,352 ft. 3½ in. south of Mill avenue, Brooklyn.

APPEARANCES—

For Appellant: Benjamin Ascher, Thomas V. White and W. E. Brown.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Laid over to June 2, 1925, at 10 a. m., for inspection by a committee of board.

1447-24-A.

APPELLANT—Keiner Williams Stamping Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—8746 123rd street, Richmond Hill, Queens.

APPEARANCES—

For Appellant: Frederick W. Fullhardt.

ACTION OF BOARD—Laid over to May 26, 1925, at 10 a. m., on request of appellant's representative.

MINUTES

6-24-A.
APPELLANT—Cornell Utilities Co., Inc., for Brotherhood of Locomotive Engineers, owner.
SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—205-207 West 33rd street, Manhattan.
APPEARANCES—
For Appellant: William Porter.
For Administration: Inspector Carroll of fire department.
ACTION OF BOARD—Laid over to May 26, 1925, at 2 p. m., on request.

15-24-A.
APPELLANT—The Tannin Corporation, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—169-195 West street, Brooklyn.
APPEARANCES—
For Appellant: None.
For Administration: Inspector Lynch of fire department.
ACTION OF BOARD—Chairman read correspondence. Appeal granted on condition.
CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Connell, Gunnison and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Holland	1

THE RESOLUTION:

(1535-24-A)

WHEREAS, The Tannin Corporation, owner, filed, December 30, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 169-195 West street, Brooklyn; and
WHEREAS, the order of the fire commissioner, dated December 5, 1924, reads:
"Reduce the quantities of empty wooden packing boxes, cases, barrels or lumber on the above premises to occupy a space not greater than two thousand cubic feet. Section 25-2-a, Chapter 12, Code of Ordinances.";

and
WHEREAS, the premises consist of a plot of ground, upon which is located a tannin extracting works, and upon part of the premises is located a space 50 ft. by 75 ft. (3,750 sq. ft.) in area, used for the storage of barrels; and
WHEREAS, appellant contends, having stored barrels in the yard of the premises over 30 years, to limit this storage to 2,000 cubic feet would close down the business.
Resolved, that the order of the fire commissioner be and hereby is modified, and the appeal be and it hereby is granted on condition that the stack of empty barrels stored on premises in an open lot shall not exceed an area of 5 ft. by 50 ft., not exceeding a height of 12 ft.; and that an open runway or space of not less than 20 ft. in width shall be maintained around the stack on all sides.

4-25-A.
APPELLANT—Frederick Meister, for Richard Carvel, owner.
SUBJECT—Appeal from decision of superintendent of buildings and order of fire commissioner.
PREMISES AFFECTED—248-254 West 60th street and 549-555 West 59th street, Manhattan.
APPEARANCES—
For Appellant: George J. Langley and Richard Carvel.
ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Connell, Gunnison and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Holland	1

THE RESOLUTION:

(54-25-A)

WHEREAS, Frederick Meister, for Richard Carvel, owner, filed, January 12, 1925, an appeal, with the board of appeals, from a decision of the superintendent of buildings, affecting premises 248-254 West 60th street and 549-555 West 59th street, Manhattan; and
WHEREAS, the decision of the superintendent of buildings, dated December 29, 1924, reads:

"With reference to application for Certificate of Occupancy, we beg to state that permanent certificate cannot be issued for the reason that the standpipe system has not been provided as required by the rules of the Board of Standards and Appeals.";

and

WHEREAS, this appeal was amended to include the order of the fire commissioner, dated April 3, 1925, which reads:

"An inspection of premises 549-55 West 59th Street and 248-52 West 60th Street, Manhattan, shows that the following must be complied with before an application for a permit to conduct a storage garage at above premises can be approved:

"2. Install 4 inch standpipe as per approved plan 1224-24.";

and

WHEREAS, the building fronts on two streets, is non-fire-proof, two stories (36 ft.) in height, 200 ft. by 100 ft. in area; OCCUPIED as a garage in an unrestricted district; and

WHEREAS, appellant contends that the building is equipped with a 100 per cent sprinkler system, together with the required secondary fire extinguishing appliances, and contends, further, that the building is low in height and in case of fire is accessible from two street fronts.

Resolved, that the decision of the superintendent of buildings, as well as order of fire commissioner, be and they are hereby modified, and the appeal be and it hereby is granted, only so far as it affects the installation of a gravity tank, on condition that a standpipe equipment shall be installed, located in the stairhalls at either end of building, connected to street main; and that the building shall be equipped with an approved wet sprinkler system.

1263-24-A.

APPELLANT—Liberty Oil Burner Co., Inc., for Russo Construction Co., owner.

SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—532 East 184th street, The Bronx.

APPEARANCES—

For Appellant: G. Galiani.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Connell, Gunnison and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Holland	1

THE RESOLUTION:

(1263-24-A)

WHEREAS, Liberty Oil Burner Co., Inc., for Russo Construction Co., owner, filed, October 24, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 532 East 184th street, Borough of Bronx; and

WHEREAS, the decision of the fire commissioner, rendered October 22, 1924, in acting on Alt. Application No. 2215-24, reads:

"2. Pump is not of a type approved by the Board of Standards and Appeals.

"3. Burner is not of a type approved by the Board of Standards and Appeals.";

and

MINUTES

WHEREAS, the building is non-fireproof, five stories in height, 50 ft. by 100 ft. in area; OCCUPIED as a dwelling for 28 families; and

WHEREAS, a fuel oil burning system has been installed consisting of a 1,000-gallon storage tank, a 50-gallon auxiliary tank and pump, a Yankce oil burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant requests a temporary permit for the installation pending the action of the board upon the approval of the burner.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety (90) days, at owner's risk, subject to action by the board of standards and appeals, on petition for approval of burner now pending, *on condition* that the fuel oil burning installation otherwise shall comply with the fuel oil rules in all respects.

840-23-A.

APPELLANT—Success Theatre Corp., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—3587-89 Broadway, Manhattan.

APPEARANCES—

For Appellant: Edward P. Doyle and Harry A. Harris.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell 5

Negative: Fire Chief Kenlon 1

Absent: Mr. Holland 1

THE RESOLUTION:

(840-23-A)

WHEREAS, Success Theatre Corp., lessee, filed, July 2, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 3587-89 Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 28, 1923, reads:

"Install standpipe fire line, in compliance with Chapter 5, Article 25, Code of Ordinances.";

and

WHEREAS, the building is fireproof, one story in height; OCCUPIED as theatre and roof garden, 600 seats in the orchestra; and

WHEREAS, this case was denied by the board at its meeting held on January 8, 1924, and reopened by the vote of the board on March 31, 1925; and

WHEREAS, appellant contends that the building faces on two streets, and proposes to carry the standpipes, one at each street front, directly to the roof, and states that the pressure in the city water mains, at the premises, is 67 pounds per square inch.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the installation of gravity tank and fire pump, *on condition* that a standpipe equipment shall be installed, independently connected with street mains on 147th street and on Broadway; and that the use and occupancy of this building shall be restricted exclusively to a moving picture theatre.

1412-22-A.

APPELLANT—Crocker National Fire Prevention Engineering Co., for Iceland, Inc., owner.

SUBJECT—Application for reopening—appeal from decision of fire commissioner.

PREMISES AFFECTED—242-264 West 53rd street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

ACTION OF BOARD—Appeal reopened and resolution modified.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell

Negative

Absent: Mr. Holland and Fire Chief Kenlon ..

THE RESOLUTION:

(1412-22-A)

WHEREAS, Corry B. Comstock, for Iceland, Inc., J. E. Fuller, president, filed, November 21, 1922, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 242-264 West 53rd street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. An approved standpipe equipment must be installed.";

and

WHEREAS, the building, one story and balcony in height, 225 ft. by 100 ft. 5 in. in area; OCCUPIED as an ice skating rink, of concrete construction; the roof being of steel trusses protected with gypsum blocks, and hanging ceiling of metal lath and plaster; and

WHEREAS, appellant contends that there are sufficient exits; and

WHEREAS, this appeal was granted by the board at its meeting December 22, 1922, on certain conditions, and the appellant requested a modification of such conditions.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so long as the building is occupied as an ice skating rink and other authorized permissible use in the 52nd street wing, approximately 37 ft. 6 in. by 98 ft. 6 in. in area operated in conjunction therewith, *on condition* that all permits required shall be obtained within 60 days and that the entire structure as to area and dimension shall remain unchanged.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Messrs. Dowd and Gunnison 2
Negative: Chairman Walsh, Messrs. Kennedy, Connell and Fire Chief Kenlon 4
Absent: Mr. Holland 1

THE RESOLUTION:

(480-24-BZ)

WHEREAS, Silberman & Steinfeld, for Tram Realty Co., owner, filed, April 3, 1924, an application, under the building zone resolution, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1927-1941 Broadway, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 12, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Broadway and Stewart street are business districts and Eastern parkway is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 14, 1924, in acting on N. B. Application No. 4669-24, reads:

"Proposed one story brick public garage for more than five motor vehicles, partly in a business district and partly in a residence district is contrary to Art. II, Sec. 3 and 4 (a) of the Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 150 ft. on Broadway and a frontage of 130 ft. on Eastern parkway and a frontage of 74 ft. on Stewart street; to be occupied as auto showrooms on Eastern parkway front and the remainder of premises as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant did not have on file at the date of hearing the 80 per cent of consents required for consideration under section 7G, and there was no testimony adduced or facts submitted, at the hearing, to substantiate the application as amended to section 21, namely, hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

669-20-BZ.

APPLICANT—Frank P. Keniston, for Metropolitan Tobacco Co., owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a business district the extension in area of an existing garage and stable for more than five (5) motor vehicles.

PREMISES AFFECTED—34 Bergen avenue, Jamaica, Borough of Queens.

APPEARANCES—

For Applicant: Frank P. Keniston.

For Opposition: None.

ACTION OF BOARD—Application reopened and resolution modified.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell 5
Negative 0
Absent: Mr. Holland and Fire Chief Kenlon .. 2

THE RESOLUTION:

(669-20-BZ)

WHEREAS, Koch & Wagner, architects for the Metropolitan Tobacco Company, owner, filed, November 8, 1920, with the board of appeals, an application under the building zone resolution, to permit in a business district the extension in area of an existing stable and garage for more than five motor vehicles; premises 34 Bergen avenue, Jamaica, Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals at its regular meeting, January 4, 1921, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

MINUTES

WHEREAS, the use district maps accompanying the building zone resolution show that the premises are located in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 4, 1920, in acting on N. B. 2612-20, reads:

"Extension of this stable and garage for more than five motor vehicles is prohibited by the Zone Resolution within a business district."; and

WHEREAS, the existing building is of non-fireproof construction, one and two stories in height, 93 ft. by 80 ft. 3 in. in area; occupied as stable and garage for more than five motor vehicles, such occupancy having existed on July 25, 1916; it is proposed to erect an extension to this building of non-fireproof construction, one story in height, 79 ft. 9 in. by 115 ft. 9 in. in area, a portion of this extension to be used for additional garage facilities; and

WHEREAS, no one appeared in opposition to the granting of this application and there existed in this street between the intersecting streets at the time of the passage of the building zone resolution a garage for more than five motor vehicles, which garage still exists; and

WHEREAS, this application was granted by the board at its meeting January 4, 1921, on certain conditions, and applicant, through his representative, Frank P. Kenniston, requested a modification of these conditions to permit an increase in the number of cars.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution and that the application be and it hereby is *granted on condition* that the easterly and northerly walls of the extension shall be unpierced throughout their entire length and height; that the capacity of the garage shall not exceed eighteen (18) motor vehicles, and shall be restricted to the use and storage of cars, the property of the owner of premises, used in the conduct of its business, and shall not include any hiring of housing to

others; that any skylights placed within the roof of the proposed extension shall be glazed with sheet glass, wire screened above and below, and shall not be within 20 ft. of the side or rear lines of the structure.

AREAS FIXED. (1523-24-BZ)

The chairman presented and read a communication from John J. Dunnigan, requesting the board to fix the area deemed affected and within which to obtain consents for the maintenance of a garage; premises 1665 Davidson avenue, The Bronx.

The following area was approved by the board:

Both sides of Davidson avenue from Featherbed lane to a point 400 ft. north of premises in question. Both sides of West 174th street from Davidson avenue to Grand avenue; also the properties at the rear and facing on the easterly side of Featherbed lane from a point 25 ft. east of Davidson avenue to a point 50 ft. west of premises in question.

(191-25-BZ)

The chairman presented and read a communication from James W. Byrnes, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 1209-1211 Putnam avenue, Brooklyn.

The following area was approved by the board:

Both sides of Putnam avenue from Central avenue to a point 100 ft. south of Evergreen avenue; the north side of Evergreen avenue from Putnam avenue to Madison street; also the premises at rear and for a distance of 50 ft. on either side of the side lot lines of the premises in question.

Adjourned 1.15 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

THE RESOLUTION:
(1374-24-A)
WHEREAS, Croker National Fire Prevention Engineering Company, for 305 Broadway Corporation, owner, filed, November 20, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 305-9 Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 20, 1924, reads:
"Order No. 58004-F:
"1. Provide iron or kalameined shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at north and west sides of building or other approved protection as per Section 375, Article 18, Chapter 5, of the Code of Ordinances.";

and

WHEREAS, the building is fireproof, 14 stories in height, 74 ft. 6 in. by 124 ft. in area; OCCUPIED as an office building, 40 persons per story; equipped with a standpipe system; and

WHEREAS, there are four and five windows in the westerly wall on the 6th to 10th stories, inclusive, within 50 ft. of a neighboring building to the west; two windows in the northerly wall, west, on the 2nd to 6th stories, inclusive, within 50 ft. of the roof of a neighboring one-story extension to the north and seven windows in the northerly court, and also four windows in the northerly wall adjacent to this court within 30 ft. from openings in or within 50 ft. of the roof of neighboring buildings to the north; and

WHEREAS, this appeal was denied by the board at its meeting held on March 3, 1925, and reopened by vote of the board on April 14, 1925; and

WHEREAS, appellant contends that all of the openings, constituting exposures in the adjoining buildings, are equipped with fire shutters and that the building under question is occupied solely as an office building, and proposes to provide iron shutters at any openings in the stair or elevator shaft within 30 ft. from openings or within 50 ft. of the roof of neighboring building.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that all exterior windows on course of elevator shafts and stairhalls throughout the building shall be equipped with fireproof frames and sash, glazed with wire glass; and *granted* only so long as premises throughout shall be maintained and restricted to executive office use and occupancy.

621-20-A.
APPELLANT—A. R. Loveridge, for Jay Street Terminal, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—39-83 Water street, Brooklyn.
APPEARANCES—
For Appellant: A. R. Loveridge.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Holland 1

THE RESOLUTION:

(621-20-A)

WHEREAS, the Jay Street Terminal, owner, filed, August 27, 1920, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 39-83 Water street, north side, 56 ft. west of Main street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated February 28, 1920, reads:

"Order No. 1536-F:

"You are hereby ordered and required, within 60 days from date of the service of this order to:

"Provide a separate and distinct system of automatic sprinklers throughout building, having at least one source of water supply arranged and equipped as provided in the rules for fire extinguishing appliances, adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919.";

and

WHEREAS, the building is non-fireproof, five stories, 50 ft. in height, 58 ft. by 140 ft. in area; OCCUPIED as a storage warehouse, with not more than 12 persons in the entire building at any one time, there being no heating apparatus in the building; and

WHEREAS, this appeal was granted by the board at the meeting held on November 30, 1920, on condition that a dry-pipe system of automatic sprinklers be installed as pro-

MINUTES

vided for in the rules of the board of standards and appeals for fire extinguishing appliances, and reopened by vote of the board at the meeting held on April 14, 1925; and

WHEREAS, appellant contends that, at the time of the granting of this appeal, the premises were used for general storage with 12 persons in the entire premises, and that the building is now used for the storage of green coffee with four (4) persons in the entire building and, in view of these facts, requests the omission of the sprinkler system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so long as the use of this building is restricted to the storage of green coffee or its equivalent in bags or bulk; and that there shall be no regular occupancy above 1st floor.

258-23-A.

APPELLANT—Leonard Padula, lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—307 Morris avenue, The Bronx.

APPEARANCES—

For Appellant: Samuel Wechsler and Leonard Padula.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(258-23-A)

WHEREAS, Leonard Padula, lessee, filed, February 23, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 307 Morris avenue, The Bronx; and

WHEREAS, the order of the fire commissioner, dated February 8, 1923, reads:

"You are therefore ordered to

"1. Reduce the stock of paper and rags to one ton.";

and

WHEREAS, the premises consist of a plot of ground on which is located a one-story frame structure, 58 ft. 9 in. by 37 ft. 8 in. in area; OCCUPIED for the storage of rags and papers; and a building 31 ft. by 65 ft. in area; OCCUPIED as baling room and stock room, located in an unrestricted district; and

WHEREAS, the appeal on this order was modified by the board at the meeting held on April 17, 1923, by granting an extension of time for such use until May 1, 1924, and reopened by vote of the board on April 21, 1925; and

WHEREAS, appellant proposes to reduce the quantity of stored rags and paper from the quantity permitted in the original appeal (five tons of rags and five tons of paper) to 2½ tons of rags and 2½ tons of paper and, in view of having covered all exposed woodwork on the premises with galvanized iron, requests a permit for a further period of one year.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period not to extend beyond June 1, 1926, *on condition* that not more than 2½ tons of paper and 2½ tons of rags shall be maintained on the premises; and that the interior of the structure shall be lined with galvanized iron.

867-23-A.

APPELLANT—James J. Walker, for Gee Kay Amusement Corp., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—2711 Webster avenue, The Bronx.

APPEARANCES—

For Appellant: James J. Walker.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(867-23-A)

WHEREAS, James J. Walker, for Gee Kay Amusement Corp., lessee, filed, July 7, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2711 Webster avenue, The Bronx; and

WHEREAS, the order of the fire commissioner, dated February 28, 1923, Order No. 11-A, reads:

"Install standpipe fire line, in compliance with Chapter 5, Article 25, Code of Ordinances.";

and

WHEREAS, the building is fireproof, one story with orchestra and balcony, 100 ft. by 200 ft. in area; OCCUPIED as a moving picture theatre, with a total capacity of 1,600 seats; and

WHEREAS, this case was withdrawn at the meeting held on September 16, 1924, and reopened by vote of the board on March 31, 1925; and

WHEREAS, appellant contends that the building has been used since 1915 as a moving picture theatre and place of public entertainment without any interruption and has had a permanent license for such purpose continuously since 1915.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the installation of a suction tank, fire pump and gravity tank, *on condition* that a standpipe equipment shall be installed with 4 in. street connection to city water main.

1387-23-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for P. & M. Building Corporation, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—622-640 West 57th street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6

Negative 0

Absent: Mr. Holland 1

THE RESOLUTION:

(1387-23-A)

WHEREAS, Croker National Fire Prevention Engineering Co., substituted for William F. Doyle, on behalf of P. & M. Building Corporation, owner, filed, November 27, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 622-640 West 57th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 50488-F, dated October 21, 1923, reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof * * *.";

and

WHEREAS, the building is fireproof, four stories and basement (55 ft. 6 in.) in height, 223 ft. by 115 ft. (25,600

MINUTES

sq. ft.) in area; OCCUPIED as a public garage and service station, a maximum of 141 persons; and

WHEREAS, this appeal was denied by the board at the meeting held on January 22, 1924, and reopened by the vote of the board on April 28, 1925; and

WHEREAS, appellant contends that, at present, the basement and 1st story of the premises are occupied for the manufacture of corrugated paper boxes, 10 persons in basement and 30 persons on the 1st story; the 2nd story, automobile service station, 15 persons; 3rd story, automobile dead storage, no persons on this story, and the 4th story, automobile repairing and painting, 10 persons; and contends further that a sprinkler system, supplied by a 25,000-gallon gravity tank and two 9,000-gallon pressure tanks with a siamese connection at the sidewalk, and also a 65-gallon-per-minute pump to maintain the tank supply, have been installed.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the installation of gravity tank, *on condition* that a standpipe equipment shall be installed in each stairhall at front of building with 4 in. street connection to city water main, with siamese connections at street fronts; and that the building shall be equipped with a wet sprinkler system in accordance with the rules of the board of standards and appeals.

Absent: Mr. Holland 1

THE RESOLUTION:

(1038-24-BZ)

WHEREAS, Charles D. Cords, for Quartin-Handler Corp., owner, filed, August 14, 1924, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a residence district, of a proposed garage for the storage of more than five motor vehicles; premises 750-760 New York avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, May 12, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Clarkson street is an unrestricted district and New York avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 22, 1924, in acting on Application No. 15209-24, reads:

"The proposed one story extension to a public garage now being constructed in an unrestricted district, is in an adjoining residence district, and is therefore contrary to Art. II, Sec. 3 of the Zone Resolution.";

and

WHEREAS, the building is to be of non-fireproof construction, one story in height, with a frontage of 200 ft. on New York avenue and 134 ft. 7½ in. on Clarkson street; and

WHEREAS, the applicant supported his application with 79 per cent consents of the owners in the area deemed affected by the board, and there being no objection on record, the board deemed the elements of hardship under section 21 supported the favorable consideration.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a one-story structure in height, above grade; that the southerly gable wall and westerly gable wall shall be unpierced throughout their entire height and length; that the roof shall be of flat design and construction; that there shall be not more than one vehicular entrance within the residence area on the New York avenue front, located 50 ft. northerly from the southerly gable wall; that the street elevations shall be finished with face brick and architectural terra cotta or stone trimmings; that no signs or advertising display shall be exposed or maintained within the residence area of the structure;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

143-25-BZ.

APPLICANT—Edward P. Doyle, for Lottie Snyder, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the

erection and maintenance of buildings to be used for store purposes only on the 1st story.

PREMISES AFFECTED—7601-23 Twenty-first avenue Brooklyn.

APPEARANCES—

For Applicant: Edward P. Doyle.

For Opposition: Alderman Kiernan, Leonard Brunner, Arthur J. Stern, Joseph Maslow, Herman Berkowitz, Julia Walter, Ethel Silver, Anne Levy, Rachel Braverman and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell

Absent: Mr. Connell and Fire Chief Kenlon ..

THE RESOLUTION:

(143-25-BZ)

WHEREAS, Edward P. Doyle, for Lottie Snyder, owner, filed, February 2, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of buildings to be used for store purposes on the 1st story; premises 7601-7623 Twenty-first avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, May 12, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Twenty-first avenue, 76th street and 77th street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 13, 1925, in acting on N. B. Application No. 466-25, 467-25 and 468-25, reads:

"N. B. Application No. 466-25 (7603 21st Ave.):

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3. The erection of stores in a residential district."

"N. B. Application No. 467-25 (7601 21st Ave.):

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3. The erection of stores in a residential district."

"N. B. Application No. 468-25 (7623 21st Ave.):

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3. The erection of stores in a residential district.";

and

WHEREAS, the premises consist of a plot of ground having a frontage of 200 ft. on Twenty-first avenue and a depth of 100 ft., upon which it is proposed to erect a row of two-story non-fireproof buildings, to be occupied as stores on the 1st story and dwellings above; and

WHEREAS, there was opposition by property owners within the area affected; and

WHEREAS, this property is wholly within the residence district, and there were no facts submitted to support the application within the rule under provisions of section 21.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

166-25-BZ.

APPLICANT—William F. Doyle, for Hallert Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a building to be used for store purposes.

Negative 0
Absent: Mr. Holland and Fire Chief Kenlon .. 2

THE RESOLUTION:

(23-25-BZ)

WHEREAS, F. W. Rinn, for Hobson Realty Co., owner, filed, January 8, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises Jerome avenue, northwest corner of 181st street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, March 31, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue and 181st street are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 5, 1925, in acting on N. B. Application No. 19-25, reads:

"1. Erection of proposed garage for storage of more than 5 motor vehicles in business district is contrary to provisions of the Building Zone Resolution.";

and
WHEREAS, the proposed building is of fireproof construction, two stories in height, with a frontage of 71.5 ft. and a depth of 92.41 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there existed on this street between the intersecting streets on July 25, 1916, a garage for more than five motor vehicles; and the board granted two garages under the same provision of exception on 181st street between Jerome and Davidson avenues; and

WHEREAS, this application was granted by the board on March 31, 1905, on certain conditions; and

WHEREAS, the applicant now proposes to construct a non-fireproof roof and also to segregate the 1st story from the 2nd story by a fireproof enclosure around the ramp.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the proposed garage shall be of fireproof construction, other than the roof, which shall be of flat design and construction, fire-retarded in accordance with the rules of the board of standards and appeals; be limited in height to a two-story building above the grade of the Jerome avenue curb level; that the rear and gable walls be unpierced throughout their entire height and length; that the street fronts on 181st street and on Jerome avenue be finished with face brick and architectural terra cotta or stone trimmings; that there shall be no roof signs of any nature or description erected or maintained on the premises and there shall be no advertising sign or display other than one projecting sign on the face of the building; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the work completed within eighteen months from the date of this action.

MINUTES

*CORRECTION.

The minutes of the meeting of the board of standards and appeals held Tuesday afternoon, October 30, 1923, as they appeared in Bulletin No. 19, Vol. X, are hereby corrected to read as follows:

(809-23-S)

WHEREAS, John A. McCoey, Jr., and H. E. Horwood, representing Croker Nat'l Fire Prev. Eng. Co., for Pyramid Playing Card Co., owner, filed, June 25, 1923, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 351-3 Jay street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 28, 1922, reads:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof * * *.

"NOTE: Among the defects noted on this fire escape are the following:

"No 45 degree connecting stairways between balconies.

"No passageway from termination of fire escape to street."

and

*Correction—Word "rear" added before fire escape in line 45 and words "and H. E. Horwood" added in line 1.

WHEREAS, the building is non-fireproof, seven stories in height, 50 ft. by 100 ft. in area; equipped with sprinkler system. EXITS: One interior stairway enclosed in wooden partition, metal covered on loft side, with metal covered doors at openings; two sub-standard fire escapes and a fire escape with fire doors and windows along course on rear of building extending from roof to 1st story with EGRESS consisting of a stairway from the 1st story balcony up to the roof of a one-story garage at the rear occupied as tenant factory, 81 persons in the entire building; and

WHEREAS, petitioner requests that owing to light occupancy of the building and the hardship involved, the existing stairway be accepted as adequate.

Resolved, that the board of standards and appeals do hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted on condition that an iron stairs shall be provided from the termination of the rear fire escape on the 2nd story to the roof of the garage, the ceiling of which is fire retarded, and that a portable iron ladder shall be provided on the front of the roof of garage and counterbalanced drop ladder in guides shall be provided to the fire escape on front of building, and that all windows on the course of the rear fire escape shall be made self-closing with the exception of the top story; granted only so long as the conditions as to occupancy and use remain unchanged.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

RULES

FIRE ESCAPE RULES

Fire Escape Rules of the Board of Standards and Appeals, adopted July 2, 1918, Cal. No. 1218-18-S; Amended Dec. 1, 1918; Cal. No. 1708-18-S; Amended May 9, 1924, Cal. No. 414-24-SR.

Rule 1. In any building erected prior to October 1, 1913, now occupied or to be occupied as a factory, more than five stories in height and not exceeding nine stories in height, nor in any case more than 90 ft. from curb level to top floor level, one of the required means of exit or escape under Section 271-1 of the Labor Law may consist of an outside fire escape, provided that:

(a) Any such fire escape hereafter erected shall comply with all the provisions of Section 273, labor law, and in addition thereto:

(1) The balconies and stairs shall be protected on the outside by substantial railings to a height of at least 4 ft. 6 in., measured from floor of balcony or center of stair tread, constructed of bars at least one-half ($\frac{1}{2}$) inch in diameter, spaced not more than six (6) inches on centers, or of substantial grill work, or of screening not less than No. 10 U. S. gauge wire with not more than one and one-half ($1\frac{1}{2}$) in. mesh, all rigidly braced;

(2) When there is safe egress from the roof of the building to any adjoining structure, the fire escape stairway shall continue to the roof, and if there be no safe means of egress, a gooseneck ladder shall be provided from the top story balcony to the roof.

(b) Any such fire escape erected prior to October 1, 1913, shall conform in every respect with the requirements of paragraph (a) of this rule, except that balconies may be not less than 3 feet in width; the connecting stairs not less than 20 inches in width, and placed at an angle not exceeding 60 degrees if the building is not over six stories in height, otherwise at an angle of 45 degrees; fire windows leading to balconies may be at window sill level if fixed steps not less than sixteen (16) inches wide are provided on the inside from floor level, leading thereto.

(c) Any such fire escape erected subsequent to October 1, 1913, and prior to these rules taking effect, unless previously accepted as one of the required means of exit or escape by the administrative official having jurisdiction, shall conform in every respect to paragraph (a) of this rule.

Rule 2. A fire escape shall not hereafter be accepted as constituting one of the required means of exit or escape under Section 271-1 of the Labor Law, in any building

erected prior to October 1, 1913, now occupied or to be occupied as a factory, exceeding nine stories in height, or more than 90 feet from curb level to top floor level.

Rule 3. When in addition to the required exits from any factory or factory building, there exist other means of egress which are not entirely in accordance with the requirements of the Labor Law and the Rules of the Board of Standards and Appeals, such means of egress may be retained under the following conditions:

(a) Fire Escapes.—All substandard fire escapes on factory buildings shall be removed or reconstructed in accordance with Section 274 of the Labor Law, except that in lieu of a counterbalanced stair a drop ladder in guides from the lowest balcony to ground may be provided. Sub-standard fire escapes shall not be considered as a basis for increased occupancy of the building. When such sub-standard fire escapes are located in any court or on the side or rear of a building, proper egress to a point of safety shall be provided, either to open adjoining yards, or the lowest balcony may be connected to an adjoining fire escape, exterior stairway, or to roof of adjoining extension, or other egress satisfactory to the Fire Commissioner. All such fire escapes shall be maintained structurally safe and properly painted.

(b) Interior Stairways.—All interior stairways not conforming to the requirements of the Labor Law or rules of the Board of Standards and Appeals may be retained, provided that egress to same is maintained unobstructed, halls are properly lighted, and all landings, passageways, etc., are maintained free and unobstructed. An easily operated panic bolt or other similar device may be installed at street exit door.

(c) Exterior Screened Stairways.—Exterior screened stairways not serving as a required means of egress shall be either removed or maintained structurally safe and properly painted, exits thereto and all platforms and passageways thereof shall be maintained unobstructed, and egress from termination shall be provided for sub-standard fire escapes in subdivision a.

(d) Horizontal Bridges.—Horizontal bridges and party wall balconies between buildings shall be removed or maintained structurally safe and properly painted, and access thereto and all passageways thereof shall be maintained unobstructed.

(e) No sign of any character shall be placed at openings leading to these sub-standard exits.

RULES

COMMUNITY LAUNDRIES IN BUSINESS DISTRICTS

Amended Resolution Adopted by the Board of Appeals, March 16, 1920, Under Cal. No. 549-17-BZ.

WHEREAS, the board of appeals, at its regular meeting, December 16, 1919, unanimously rescinded an opinion incidentally expressed and incorporated in a resolution adopted by the board on May 28, 1917, in acting on Cal. No. 549-17-BZ. This opinion was that a laundry is not a prohibited use in a business district under the building zone resolution. The board unanimously rescinded this expression of opinion, inasmuch as a laundry is a factory within the meaning of the labor law and must be so construed

under the building zone resolution in the absence of any definition therein to the contrary.

Resolved, that this shall not be construed to include within the prohibited uses specified under Section 4 of the building zone resolution a community or neighborhood laundry located in the basement or ground floor of a building within a business district and containing not more than eight (8) rotary washing machines with inside cylinders not more than 30 in. in diameter by 30 in. in length over all nor more than two 20 in. extractors, the 20 in. measurement being the diameter of the inside basket, which machines and extractors shall be operated solely by electric power and do not require the installation of steam boiler or plant.

BOARD OF APPEALS.

Appeals from Administrative Orders.

The forty-eight pier cases listed herewith were laid over, pending decision by the Supreme Court on a test case.

Pier Cases.

- 480-19-A—Piers 4 and 5, North River, Manhattan.
- 481-19-A—Old Pier 3, North River, Manhattan.
- 594-19-A—Pier 8, North River, Manhattan.
- 595-19-A—Pier 44, East River, Manhattan.
- 877-19-A—Pier 14, North River, Manhattan.
- 878-19-A—Pier 15, North River, Manhattan.
- 879-19-A—Pier 15, North River, Manhattan.
- 880-19-A—Pier 28, East River, Manhattan.
- 881-19-A—Pier 1 (Old), North River, Manhattan.
- 882-19-A—Pier 27, North River, Manhattan.
- 883-19-A—Pier 29, North River, Manhattan.
- 884-19-A—Pier 30, North River, Manhattan.
- 885-19-A—Pier 78, North River, Manhattan.
- 886-19-A—Pier 42, North River, Manhattan.
- 890-19-A—Pier 70, East River, Manhattan.
- 937-19-A—Piers 37 and 38, East River, Manhattan.
- 948-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95587-F.)
- 949-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95586-F.)
- 950-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95585-F.)
- 981-19-A—Piers 22-25, East River, Manhattan.
- 1003-19-A—Pier 28, North River, Manhattan.
- 31-20-A—Pier 13, East River, foot of Wall street, Manhattan.
- 265-20-A—Pier 46, East River, foot of Van Brunt street, Brooklyn.
- 266-20-A—Pier 39, East River, foot of Van Dyke street, Brooklyn.
- 267-20-A—Pier 31, East River, s. w. s. Atlantic Basin, Brooklyn.
- 268-20-A—Pier 36, East River, foot of Pioneer street, Brooklyn.
- 269-20-A—Pier 35, East River, n. e. s. Atlantic Basin, Brooklyn.
- 270-20-A—Pier 34, East River, foot of Hamilton street, Brooklyn.
- 271-20-A—Pier 27, East River, foot of Baltic street, Brooklyn.
- 272-20-A—Pier 17, East River, foot of Joralemon street, Brooklyn.
- 273-20-A—Pier 19, East River, foot of Clark street, Brooklyn.
- 318-20-A—Pier between North 4th and 5th streets, East River, Brooklyn.
- 352-20-A—Pier 3, Wallabout basin, foot of Washington and E streets, Brooklyn.
- 353-20-A—Pier 2, Wallabout basin, foot of Washington and F streets, Brooklyn.
- 383-20-A—Pier 20, East River Manhattan.

- 420-20-A—Pier 5, between Poplar and Middagh streets, Brooklyn.
- 421-20-A—Pier 22, foot of Atlantic avenue, Brooklyn.
- 422-20-A—Pier 29, foot of Harrison street, Brooklyn.
- 423-20-A—Pier 32, foot of Degraw street, Brooklyn.
- 471-20-A—Pier between North 4th and 5th streets, Brooklyn.
- 907-21-A—East side South street, foot of Dover street, Manhattan.
- 1205-21-A—Pier No. 21, East River, east side South street, foot of Dover street, Manhattan.
- 1302-21-A—Pier 15, East River, Manhattan.
- 1541-21-A—Pier 3, between Main and Dock streets, Brooklyn.
- 1542-21-A—Pier 3, between Main and Dock Streets, Brooklyn.
- 1543-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1544-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1545-21-A—Pier 2, between Main and Dock streets, Brooklyn.

BOARD OF STANDARDS AND APPEALS.

Appliances Submitted for Approval.

- 53-21-S—Angle Hose Valve.
- 1372-21-S—Ford Fire Line Reducing Valve, approval of.
- 337-22-S—Elkhard Brass Company, Siamese Connection, approval of.
- 357-22-S—Quinn Acme Crude Oil Burner, approval of.
- 392-22-S—The Surface-Combustion Company Low Pressure Gas and Oil Burner, approval of.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, May 29, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. Where the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except where tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] *two hundred (200)* feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;
- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—
 - 25 feet in 5 to 12 foot bays.
- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each $62\frac{1}{2}$ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests].* Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Minutes of Meeting, Board of Appeals, May 19, 1925.
- Minutes of Meeting, Board of Standards and Appeals, May 19, 1925
- Correction.
- Reserve Calendar.
- Notice of Public Hearing.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, May 26, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, June 2, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALL OF CLERK'S CALENDAR.

Tuesday, May 26, 1925, at 2 p. m.

Building Zone Cases.

60-25-BZ.
APPLICANT—Edward Hoffmann, for Benenson Realty Co., owner.
PREMISES—2115-37 Webster avenue, The Bronx.
TO PERMIT in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

338-25-BZ.

APPLICANT—Euell & Euell, for Bernardo Affini owner.

PREMISES—1295 Cromwell avenue, The Bronx.
TO PERMIT in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

221-25-BZ.

APPLICANT—John J. Dunnigan, for Joseph Zimmerm and Abraham Mitchel, owners.

PREMISES—166-172 South 1st street, Brooklyn.
TO PERMIT in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

344-25-BZ.

APPLICANT—William F. Doyle, for Central Zone Cor owner.

PREMISES—15-19 East 33rd street and 18-22 East 34 street, Manhattan.

TO PERMIT in a business, and also two (2) times height district, the erection of the street walls of a building to a height exceeding the limit set by the zone resolution.

335-25-BZ.

APPLICANT—Alfred J. Boulton, for The Stuyvesant Real Estate Co., Inc., owner.

PREMISES—89-99 Granite street, Brooklyn.
TO PERMIT in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

545-24-BZ.

APPLICANT—Henry I. Perlin, for Bertha Freitag, owner.

PREMISES—380 Etna street, Brooklyn.
TO PERMIT in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises.

BOARD OF APPEALS.

Tuesday, May 26, 1925, at 10 a. m.

Appeals from Administrative Orders.

312-25-A—56-60 Pearl street, Brooklyn.

311-25-A—931-939 Carroll street, Brooklyn.

164-25-A—303 East 170th street, The Bronx.

414-25-A—North side of DeKalb avenue, 200 ft. west of Onderdonk avenue, Ridgewood, Queens.

1410-24-A—52 Lispenard street, Manhattan.

226-25-A—29 West 17th street, Manhattan.

239-25-A—890 Grant avenue, The Bronx.

256-25-A—North side of West 189th street, between Wadsworth avenue and Wadsworth terrace, Manhattan.

255-25-A—731-735 West 177th street and 2-14 Northern avenue, Manhattan.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, May 26, 1925, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:*

CAL. NO. 136-24-BZ—Application, January 29, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of

CALENDAR

Max Katz, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 809 Union avenue, The Bronx.

CAL. NO. 378-24-BZ—Application, March 11, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Hesu Realty Co., Inc., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1101-1109 Union avenue, The Bronx.

CAL. NO. 1367-23 BZ—Application, December 23, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of B. R. Construction Co., owner, previously denied, to permit in a "B" area district the erection and maintenance of a building occupying more than 40 per cent of the rear yard area; premises 1211-1263 Boynton avenue, The Bronx.

CAL. NO. 190-24-BZ—Application, April 28, 1925, under the building zone resolution, of Edward V. Dodd, applicant, on behalf of William F. Till, owner, previously denied, to permit the erection of a public garage for the storage of more than five (5) motor vehicles; premises 2513-2519 Tilden avenue, Brooklyn.

CAL. NO. 132-25-BZ—Application, January 29, 1925, under the building zone resolution, of Samuel Cohen, applicant, on behalf of Sherman-Fulton Co., Inc., owner, to permit in a residence district the alteration and conversion of occupancy from residence use to a business use on the 1st story only; premises 321 West 118th street, Manhattan.

CAL. NO. 715-24-BZ—Application, May 21, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Leo Solicito, owner, to permit in a residence district the maintenance of a garage for the storage of four (4) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 811 East 224th street, The Bronx.

CAL. NO. 292-25-BZ—Application, March 16, 1925, under the building zone resolution, of Samuel Marer, applicant and owner, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 2621-2631 Aqueduct avenue, The Bronx.

CAL. NO. 1413-24-BZ—Application, November 29, 1924, under the building zone resolution, of Walter B. Wills, applicant, on behalf of M. Richman, owner, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1180-1188 Myrtle avenue, Brooklyn.

CAL. NO. 249-25-BZ—Application, March 4, 1925, under the building zone resolution, of Peter P. Smith, applicant, on behalf of Bay

Ridge Savings Bank, owner, to permit in a residence district extending from a business district the erection and maintenance of a business building to be used for banking purposes; premises 5315-5325 Fifth avenue, Brooklyn.

CAL. NO. 1399-24-BZ—Application, November 25, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Frederick P. Ballard, owner, to permit partly in a business district and partly in a residence district the alteration and change of occupancy from a stable and private garage to a garage for the storage of three (3) commercial and two (2) pleasure motor vehicles, two (2) spaces rented to persons not residing on the premises; premises 708 East 216th street, The Bronx.

WILLIAM E. WALSH, *Chairman.*

BOARD OF APPEALS.

SPECIAL MEETING.

Tuesday, May 26, 1925, at 2 p. m.

Appeals from Administrative Orders.

1447-24-A—8746 123rd street, Richmond Hill, Queens.

1496-24-A—205-207 West 33rd street, Manhattan.

785-24-A—6118 Rockaway Beach boulevard, Arverne, Queens.

588-24-A—250 Hudson street, Manhattan.

589-24-A—43-45 Wooster street, Manhattan.

331-24-A—508-534 West 212th street, Manhattan.

1510-24-A—1038 Ocean avenue, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday afternoon, May 26, 1925, at 2 o'clock, in Room 1013, Municipal Building, on the following matters:*

CAL. NO. 237-25-BZ—Application, February 26, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Bee Dee Realty Co., owner, to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 38-44 State street, Brooklyn.

CAL. NO. 811-24-BZ—Application, June 17, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Hattie W. THE RESOLUTION:

(138-25-A)

WHEREAS, C. E. Hicks, for New York Dock Co., owner,
on January 31, 1925, an appeal, with the board of ap-
peals, from orders of the fire commissioner, affecting pre-
mises foot of Amity and Congress streets, Warehouse No.
102, Brooklyn; and

WHEREAS, the orders of the fire commissioner, dated
January 10, 1925, reads:

"No. 70562-F—Warehouse No. 98-102:

"1. Install a standpipe system with risers 4 inches
in diameter tested to withstand a pressure of 300 lbs.
per square inch, extending from cellar to roof, with
necessary check valves and 2½ inch regulation Fire
Department outlets on each story (including basements,
cellars and roofs), placed within main stairway en-
closure. Each outlet to be provided with sufficient feet
of 2½ inch standard hose attached thereto."

"No. 70563-F—Warehouse No. 99-100-101:

"1. Install a standpipe system with risers 4 inches
in diameter tested to withstand a pressure of 300 lbs.
per square inch, extending from cellar to roof, with
necessary check valves and 2½ inch regulation Fire
Department outlets on each story (including basements,
cellars and roofs), placed within main stairway en-
closure. Each outlet to be provided with sufficient feet
of 2½ inch standard hose attached thereto.";

WHEREAS, the premises consist of four non-fireproof build-
ings: No. 99 being five stories in height, 66 ft. 6 in. by
2 ft. 1 in. (approximately 13,000 sq. ft.) in area; No.
100, five stories in height, 64 ft. 2 in. by 201 ft. (approx-
imately 12,500 sq. ft.) in area; No. 101, five stories in
height, 49 ft. by 200 ft. 6 in. (approximately 9,500 sq. ft.)

in area; No. 102, four stories in height, 118 ft. by 100 ft.
9 in. (approximately 11,500 sq. ft.) in area; all buildings
being separated from one another with unpierced walls
and standard parapets; and all occupied as storage ware-
houses; no regular occupancy; and

WHEREAS, appellant contends that no inflammable or
hazardous materials are stored in the premises; that the
location is accessible to fire boats and is amply provided
with high and low pressure city fire hydrants; that the
premises are patrolled by watchman on duty at all times
and that there is no heating system in the buildings and
that any standpipe system installed would freeze and burst
in cold weather.

Resolved, that the order of the fire commissioner, No.
70562, affecting the one building known and described as
Warehouse No. 98 and 102, be and it hereby is *modified*,
and the appeal be and it hereby is *granted on condition*
that the subdivision walls shall be unpierced throughout their
entire length; that any openings in the rear wall, overlook-
ing premises at the rear, shall be provided with iron shut-
ters; that the storage use shall be limited to cocoa beans
in bulk or bag, nutmegs, hides and similar commodities;
that there shall be no permanent occupants above the 1st
floor; that the order of the fire commissioner, No. 70563,
affecting Warehouses No. 99 and No. 100, be and it hereby
is *modified*, and the appeal be and it hereby is *granted*
on condition that the sub-division walls shall be un-
pierced throughout their entire height and length; that any
openings in rear, overlooking Building 108, shall be pro-
vided with iron shutters; that the storage use shall
be limited to nutmegs, hides, cocoa beans or commodities
of similar nature, in bulk or bag; and that there shall
be no permanent occupants above 1st floor, and *granted*, as
to Building 101, so long as size of building is not increased
in area or height.

66-25-A.

APPELLANT—Croker National Fire Prevention En-
gineering Co., for Oscar Buchheister Co., Inc.,
lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—245 West 55th street,
Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Lynch of fire
department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Ken-
nedy, Dowd, Gunnison, Connell, Hol-
land and Acting Fire Chief Martin..... 7
Negative 0
Absent 0

THE RESOLUTION.

(66-25-A)

WHEREAS, Croker National Fire Prevention Engineering
Company, for Ruth A. Wallace, owner, filed, January 15,
1925, an appeal, with the board of appeals, from an order
of the fire commissioner, affecting premises 245 West 55th
street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated No-
vember 7, 1924, reads:

"Order No. 26291-LC:

"2. Discontinue storing film in closet in examining
room.

"3. Provide approved double walled metal cabinet
for storage of not over 50 reels of film. Cabinet
must be vented as per Section 232-3-d, Chapter 10, Code
of Ordinances. It must be protected by having one
sprinkler head, properly connected, inside the cabinet.
Cabinet must *not* be located in the examining room.";

MINUTES

WHEREAS, the building is fireproof, 13 stories in height, 60 ft. by 100 ft. in area at the 1st story and 60 ft. by 88 ft. in area above; OCCUPIED for stores and lofts, approximately 140 persons above the 1st story; appellant occupying the top story for making backgrounds and titles for moving pictures; equipped with a standpipe and also a sprinkler system; and

WHEREAS, appellant contends that the films (less than 50 reels) are stored in a terra cotta block enclosure with a metal door at the opening therein, and contends further that there is a sprinkler head inside the vault and that the vault is vented to the outer air.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Items 2 and 3, *on condition* that the quantity of films stored on the premises shall not exceed 50 reels, maintained in a fireproof enclosure, approximately 2 ft. 6 in. by 4 ft. 4 in. in area, located in pent house story; that said enclosure shall be vented to outer air; and that there shall be not more than one doorway to same, equipped with approved fireproof door with interlocking jambs; and that said fireproof enclosure shall be equipped with a jumbo sprinkler head.

189-25-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for American Book Match Corp., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED — 338-340 Flushing avenue, Brooklyn.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Acting Fire Chief Martin.....	7

THE RESOLUTION.

(189-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for American Book Match Corporation, owner, filed, February 16, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 338-40 Flushing avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated November 25, 1924, reads:

"Order No. 68124-F:

"1. Provide a separate and distinct system of Automatic Sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919.";

and

WHEREAS, the building is non-fireproof, two stories in height, 46 ft. 1 in. by 68 ft. 6 in. in area; divided into two sections by a fore and aft wall with openings therein on the 1st and 2nd stories; the opening on the 1st story being protected with two self-closing fireproof doors; the opening on the 2nd story being unprotected; OCCUPIED for the manufacture and storage of book matches, 18 persons in the entire premises; and

WHEREAS, appellant contends that the hazardous materials, sulphur and chlorate of potash, etc., used in the manufacture of matches, are stored in a vault outside the building; and proposes to place fire doors at the opening in the division wall on the 2nd story, thereby subdividing

the area into two distinct areas, each provided with two means of exit.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the use and occupancy shall be vacated and discontinued on or before September 1, 1925, that any horizontal openings on the 1st story shall be provided with approved automatic, self-closing fire doors and an approved self-closing swinging door at horizontal opening on 2nd story.

THE RESOLUTION:

(151-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Columbia University, owner, filed, February 4, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 1-3 Amsterdam avenue and 447 West 59th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 8, 1924, reads:

"1. Provide a tank on roof of at least 3500 gallons capacity for the standpipe system, said tank to be so elevated that the bottom will be not less than 20 feet above the roof level. Sec. 20, Ch. 12, Code of Ordinances.";

and

WHEREAS, the building is fireproof, seven stories in height, 114 ft. by 134 ft. 6 in. in area; OCCUPIED as a hospital, 431 persons in the entire premises; EQUIPPED with a standpipe system, is supplied by two 8 by 12 and 7 by 12 Snow duplex steam pumps which maintain a constant pressure of 80 pounds per sq. in. in the system at all times, and that the pumps are located in another building and out of danger from a fire in premises in question, and contends further that there is a fire department siamese on the Amsterdam avenue front of the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the installation of tank, *on condition* that the existing standpipe system shall be equipped with two (2) duplex steam pumps supplied from suction tank; that the standpipe system shall be maintained independent of house service; and that all necessary check valves shall be provided.

THE RESOLUTION:

(299-25-A)

WHEREAS, William F. Doyle, for Fulton Auto Lamp & Radiator Works Corporation, lessee, filed, March 18, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 136 West 50th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 10, 1925, reads:

"Order No. 28133-LC:

"With reference to your application, dated December 23, 1924, for a permit to maintain a motor vehicle repair shop, at 136 West 50th Street, Manhattan, this location appears to be shown on the use district map accompanying the Building Zone Resolution of the Board of Estimate and Apportionment as a business district. Inasmuch as you are conducting or propose to conduct a business which is a prohibited use at this location, your application is denied.";

and

WHEREAS, the building is non-fireproof, three stories in height, 25 ft. by 100 ft. in area at the 1st story and 25 ft. by 80 ft. in area above. OCCUPIED: 1st story, radiator lamp works, 5 persons; 2nd story, machine shop, 3 persons; 3rd story, plumbing supplies, 2 persons; and

WHEREAS, appellant contends that the work done (on automobiles) on the premises consists of removing auto lamps and radiators from the autos, repairing and then replacing same, and that no repairs are made to the mechanical part of the motor vehicles.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the use and occupancy shall be limited or confined to work incidental to lamp and radiator repair work; and that no motor-driven machinery shall be used in the operation of the business.

THE RESOLUTION:

(250-25-A)

WHEREAS, Wm. F. Doyle, for Gertana Realty Corp., owner, filed, March 4, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 89-91 Bridge street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 10, 1924, reads:

"Order No. 91425-C:

"Reduce the quantity of nitro-cellulose products, including raw, finished and partly finished stock, to not more than 100 pounds (in accordance with the provisions of Section 232, subdiv. 21 of chapter 10, code of ordinances (inasmuch as materials of a highly in-

flammable nature (celluloid) are manufactured in a portion of the building above the nitro-cellulose occupancy.";

and

WHEREAS, the building is non-fireproof, two stories in height, 50 ft. by 100 ft. in area; divided into two sections by a fore and aft fire wall, with openings on each story, protected with fire doors on each side of wall. OCCUPIED: 1st and 2nd stories for celluloid products manufacturing and also paper boxes (appellant occupying the 1st story north for the manufacture of celluloid products), 100 persons in the entire premises; equipped with a two-source sprinkler system; and

WHEREAS, appellant contends that the fire department would grant a permit for the occupancy if the entire premises were under one tenancy, but that there is more than one tenant with the same type of occupancy.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall not be increased in area, size or dimensions; and that the requirements of the resolution under Cal. No. 1250-23-A shall be complied with and maintained.

THE RESOLUTION:

(251-25-A)

WHEREAS, William F. Doyle, for Gertana Realty Corp., owner, filed, March 4, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 89-91 Bridge street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 10, 1924, reads:

"You are hereby ordered and required forthwith to surrender to the bearer Fire Department permit No. 121949 issued to you on August 5th, 1924, to expire August 1st, 1925, authorizing the storage of 1500 pounds of nitro-cellulose in the business of manufacturing optical goods conducted by you on the above premises, as it is revoked for the following reason:

"1. Sub-Div. 2 of Section 232, Article 19, Chapter 10, Code of Ordinances, provides that no permit for the storage or manufacture of nitro-cellulose products shall be issued for any building where dry goods, garments or other materials of a highly inflammable nature are manufactured in a portion of a building, above the nitro-cellulose occupancy, or in any case, where more than six people are employed or likely to congregate at any one time, if the storage of nitro-cellulose products exceeds 100 pounds.";

and

WHEREAS, the building is non-fireproof, two stories in height, 50 ft. by 100 ft. in area; divided into two sections by a fore and aft fire wall, with openings (protected by fire doors on each side of wall) on each story; OCCUPIED on the 1st and 2nd stories for the manufacture of celluloid products and also paper boxes, appellant occupying the 2nd story, north, for the manufacture of celluloid products,

THE RESOLUTION:

(223-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., substituted for Philip Pfeiffer, for Glenwood Theatre Co., Inc. (Ph. Pfeiffer, pres.), owner, filed, February 25, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2406-14 Myrtle avenue, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated December 15, 1924, reads:

"Install standpipe system in accordance with the requirements of article 25, chapter 5, code of ordinances, and the regulations of the Board of Standards and Appeals.";

and

WHEREAS, the building is fireproof, one story (approximately 34 ft.) in height, 100 ft. by 120 ft. 6 in. (approximately 12,500 sq. ft.) in area; OCCUPIED by four (4) stores on the Myrtle avenue front and the remainder of the premises as a motion picture theatre, seating 1,300 persons; and

WHEREAS, appellant contends that the theatre is amply provided with exits; that the stores (occupying 12 per cent of the total area) are separated from the theatre portion of the premises by 12 in. unpierced walls, and proposes to install a standpipe riser and 100 ft. of hose at the rear of the auditorium, with a 4 in. street connection to the city main, said main having a pressure of 35 pounds per sq. in. and being fed both ways.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that store occupancy shall not be increased in area, size or dimension; that the store occupancy shall be separated by approved unpierced fireproof walls; and that a standpipe equipment shall be installed with not less than a 4 in. connection to the city main, in accordance with the rules of the board of standards and appeals.

CASE DISMISSED.

The chairman called attention to the following case, where notice of intention to appeal was offered for filing; but where, despite notices from this office, papers have not

been completed, thus tying the hands of the administrative official in the performance of his duty:

(1517-24-A)

Filed December 26, 1924—Premises 935-937 Courtlandt avenue, The Bronx. Order of the fire commissioner. Appellant, Christian Diehl. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Acting Fire Chief Martin	7
Negative	0
Absent	0

THE RESOLUTION:

WHEREAS, the appellant, having failed to complete his papers, though duly notified to do so.

Resolved, that the foregoing appeal be and it hereby is *dismissed* for lack of prosecution.

THE RESOLUTION:

(1358-24-BZ)

WHEREAS, Edward P. Doyle, substituted for Murray Klein, for Lirpa Realty Co., owner, filed, November 18,

1924, an application, under the building zone resolution, to permit in a business district the alteration and change of occupancy of a stable for more than five horses to a garage for the storage of more than five motor vehicles; premises 57-59 West 132nd street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 19, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 132nd street, West 133rd street and Lenox avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered November 7, 1924, in acting on Alteration Application No. 2523-24, reads:

"1. Conversion of building to garage for more than 5 cars, with structural changes, is unlawful in a restricted district. Zone Resolution, Section 6.";

and

WHEREAS, the existing building is of non-fireproof construction, three stories in height, with a frontage of 55 ft. and a depth of 99 ft. 11 in.; occupied as a stable; it is proposed to convert the building to a garage for the storage of more than five motor vehicles; and

WHEREAS, this application came strictly within the provisions of exemption specified in section 7-e of the zoning resolution and the board deemed it would be hardship and injustice to deny the application.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the gable walls shall be unpierced throughout their entire height and length; that any openings in the rear wall shall be within applicant's property, opening on open space of same premises, and any such openings shall be equipped with fixed steel sash, glazed with wire glass, with not more than one ventilator to each opening; that all openings on the front of the building shall be equipped with kalamein frames and sash, glazed with wire glass; that there shall be no signs or advertising displayed, other than one electric projecting sign, indicating the title of the garage, and located at the front of the building; that the front of the building shall be painted with not less than three coats of oil paint striped in white joints; that there shall be no portable gasoline use or equipment permitted outside of the street wall; that all permits required and necessary for the prosecution of the work shall be obtained within six months and the work completed within one year from the date of this action.

1092-24-BZ.

APPLICANT—John W. Clancy, for Michael Naftal, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—331 East 184th street, The Bronx.

MINUTES

THE RESOLUTION:

(1092-24-BZ)

WHEREAS, John W. Clancy, for Michael Naftal, owner, filed, September 2, 1924, an application, under the building zone resolution, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 331 East 184th street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 19, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 184th street is a business district and Tiebout avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered August 23, 1924, in acting on N. B. Application No. 2349-24, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business and residence district is contrary to the provisions of the Building Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 73.88 ft. and a depth of 176 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board, after full consideration of additional facts presented, deemed it would be a hardship to deny the application.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be erected fireproof, and that it shall not exceed two stories in height above the grade level at the centre of the plot of Tiebout avenue; that the northerly gable wall and rear wall shall be unpierced throughout their entire height and length; that there shall be no vehicular entrance on 184th street, and there shall be but one emergency exit provided on 184th street, not exceeding 3 ft. 8 in. in width, equipped with panic bolts operative only from the interior of the building; that the street elevation shall be of face brick, with architectural terra cotta or stone trimmings; that no roof sign shall be erected or maintained, and no advertising or signs displayed on the premises other than one projecting electric sign, indicating the title of the garage; that any gasoline storage equipment shall be located on the Tiebout avenue front, inside the street wall; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building erected within eighteen months from the date of this action.

220-25-BZ.

APPLICANT—Irving Seelig, for Beth El Talmud Torah of Flatbush, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence and "D" area district the erection and maintenance of a building occupying more than 80 per cent of a corner lot at the curb level; contrary to section 14, subdivision (c) of the building zone resolution.

PREMISES AFFECTED—1219-1221 Avenue T, Brooklyn.

APPEARANCES—

For Applicant: David F. Price, Irving Seelig, Harry H. Friedman and Jacob Sachs.

Absent: Mr. Gunnison

THE RESOLUTION:

(220-25-BZ)

WHEREAS, Irving Seelig, for Beth El Talmud Torah of Flatbush, owner, filed, February 24, 1925, an application under the building zone resolution, to permit in a residence and also "D" area district the erection and maintenance of a building, occupying at the curb level more than 80 per cent of a corner lot; contrary to section 14, subdivision C of the zone resolution; premises 1219-1221 Avenue T, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 19, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Homecrest avenue and Avenue T are residence and "D" area districts; and

WHEREAS, the decision of the superintendent of buildings rendered December 22, 1924, reads:

"4. Area of building exceeds 80 per cent of lot."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story and basement and balcony in height, with a frontage of 40 ft. and a depth of 93 ft. 6 in. To be occupied: Basement, ball room and kitchen; 1st story and balcony, synagogue; and

WHEREAS, the proposed use included a place of public assembly and was not strictly a house of worship; and

WHEREAS, there was opposition by practically all property owners in the affected area, who would be adversely affected, and the board deemed that applicant failed completely to substantiate his basis of appeal under section 21, namely, hardship.

Resolved, that the decision of the superintendent of buildings be and the same hereby is *affirmed*, and the application be and it hereby is *denied*.

THE RESOLUTION:

(234-25-BZ)

WHEREAS, McKim, Mead & White, for Columbia University, owner, filed, February 26, 1925, an application, under the building zone resolution, to permit in a 1½ times height district the erection of the street walls of a building to a height exceeding the limit set by the zone resolution; premises northwest corner of West 114th street and Amsterdam avenue, Manhattan; and

MINUTES

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 19, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Amsterdam avenue is a business and $1\frac{1}{2}$ times height district and West 114th street is a residence and $1\frac{1}{2}$ times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 17, 1925, in acting on N. B. App. No. 90-1925, reads:

"1. Setbacks and dormers in the portion of this building more than 150 feet from Amsterdam Avenue should be made to comply with Building Zone Resolution, Section 8f and Section 9c.";

and

WHEREAS, the proposed building is to be of fireproof construction, 12 stories and basement in height, with a frontage of 208 ft. and a depth of 80 ft.; to be occupied as students' hall, a portion of the street wall 38 ft. in length is limited to a height of 90 ft. and a portion 20 ft. in length set back 17 ft. from the building line to a height of 141 ft., the remainder to 150 ft.; it is proposed to erect the entire street wall to a height of 150 ft.; and

WHEREAS, there was no opposition to the granting of this application and the board deemed that the spirit and intent of the zone resolution will be fairly and equitably complied with by the alternate proposition offered by applicant.

Resolved, that the board of appeals does hereby *make a variation* in the application of the height district regulation of the building zone resolution and that the application be and it hereby is *granted on condition* that a street court of a depth not less than 17 ft. and a frontage of 129 ft. be established and maintained on the 114th street front, and that the requirements of the building zone resolution be complied within all other respects; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

CASES DISMISSED.

The chairman called attention to the following cases, where notices of intention to appeal were offered for filing; but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(1219-24-BZ)

Filed October 10, 1924—Premises 477-487 Gates avenue, Brooklyn. Decision of the superintendent of buildings. Applicant, Philip J. Sinnott. Dismissed for lack of prosecution.

(1478-24-BZ)

Filed February 16, 1924—Premises southeast corner of Jamaica avenue and 195th street, Hollis, Queens. Decision of the superintendent of buildings. Applicant, Thomas J. Nagle. Dismissed for lack of prosecution.

(1533-24-BZ)

Filed December 29, 1924—Premises 486-510 St. Johns place, Brooklyn. Decision of the superintendent of

buildings. Applicant, I. Seelig. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Acting Fire Chief Martin	7
Negative	0
Absent	0

THE RESOLUTION:

WHEREAS, the applicants have failed to complete their papers, though duly notified to do so.

Resolved, that the foregoing applications be and they hereby are *dismissed* for lack of prosecution.

AREAS FIXED.

(313-25-BZ)

The chairman presented and read a communication from Emil Guterman, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 521-23 Bergen street, Brooklyn.

The following area was approved by the board:

Both sides of Bergen street from Sixth avenue to Carlton avenue, also the properties at and for a distance of 50 ft. on either side of the side lot lines of the premises in question.

(325-25-BZ)

The chairman presented and read a communication from Thomas W. Golding, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 80-92 Kingsland avenue, Brooklyn.

The following area was approved by the board:

Both sides of Kingsland avenue from a point 200 ft. north of Richardson street to a point 400 ft. south of proposed garage. Both sides of Frost street from a point 200 ft. west of Kingsland avenue to a point 400 ft. east of premises in question, also both sides of Richardson street from a point 200 ft. west of Kingsland avenue to a point 100 ft. east of Kingsland avenue.

(319-25-BZ)

The chairman presented and read a communication from Hector McG. Curren, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises south side of Germania place, 150 ft. west of Nostrand avenue, Brooklyn.

The following area was approved by the board:

Both sides of Germania place and East 29th street from Flatbush avenue to Avenue H. Both sides of Kenilworth place from Germania place to a point 200 ft. west of Germania place. The north side Amersfort place, also the west side of Nostrand avenue from Avenue H to Germania place.

Adjourned 2.45 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

REGULAR MEETING.

TUESDAY AFTERNOON, MAY 19, 1925.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore.

The minutes of the regular meeting of the board of standards and appeals, held on Tuesday afternoon, May 19, 1925, were approved as printed in the Bulletin, No. 19, Vol. X.

PETITIONS FOR VARIATIONS.

982-24-S.

PETITIONER—New York Yellow Cab Co., Sales Agency, Inc., lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—614-618 West 131st street, Manhattan.

APPEARANCES—

For Petitioner: Louis Le Vine.

ACTION OF BOARD—Laid over to June 2, 1925, at 2 p. m., on request of petitioner's representative.

163-25-S.

PETITIONER—Moore & Landsiedel, for Third Ave. Holding Co., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—4049 Third avenue, The Bronx.

APPEARANCES—None.

ACTION OF BOARD—Laid over to June 16, 1925, at 2 p. m., on request of petitioner.

1412-23-S.

PETITIONER—Henry J. Nurick, for Brewster Publications, Inc., owner.

SUBJECT—Application for reopening—variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—174 Duffield street, Brooklyn.

APPEARANCES—

For Petitioner: Henry J. Nurick.

ACTION OF BOARD—Laid over to June 2, 1925, at 2 p. m., on request of petitioner.

273-25-S.

PETITIONER—Thomas B. Leahy, for William Kreinick & Co., Inc., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—131 West 45th street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Laid over to June 2, 1925, at 2 p. m., on request of petitioner.

1102-24-S.

PETITIONER—Arthur Greenbaum, for Abram I. Kaplan, lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—251 Fifth avenue and 1 East 28th street, Manhattan.

APPEARANCES—

For Petitioner: John Keating.

ACTION OF BOARD—Laid over to June 16, 1925, at 2 p. m., on request of petitioner's representative.

1418-24-S.

PETITIONER—Irving Finklestein, for Beno Realty Company, owner.

SUBJECT—Application for reopening—variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—20 East 31st street, Manhattan.

APPEARANCES—

Albert P. Wolheim.

ACTION OF BOARD—Request for reopening laid over to June 2, 1925, for final disposition, on request of petitioner.

198-25-S.

PETITIONER—Thomas B. Leahy, for Berley & Co. lessee.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—566-568 Seventh avenue, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Request for reopening laid over to June 2, 1925, at 2 p. m., on request of petitioner.

1712-21-S.

PETITIONER—Sigmund Schuler, for Caroline De Rosa, owner.

SUBJECT—Application for reopening—variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—80 West Houston street, Manhattan.

APPEARANCES—

For Petitioner: Sigmund Schuler.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Request for reopening laid over to June 2, 1925, at 2 p. m., for report from Inspector Maher.

718-18-S.

PETITIONER—Harold L. Young, for Lazarus Levy, owner.

SUBJECT—Application for reopening—variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—17-23 East Broadway, Manhattan.

APPEARANCES—

For Petitioner: William C. Sommerfeld.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Laid over to June 2, 1925, at 2 p. m., for full vote of board.

THE VOTE TO REOPEN—

Affirmative: Chairman Walsh, Messrs. Gunnison and Connell, Superintendents Brady, Reville and Moore

Negative: Acting Fire Chief Martin and Superintendent Kleinert

Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott

1-25-S.

PETITIONER—John H. Schiernbeck, owner.

SUBJECT—Variation of labor law as cited in decision of health commissioner.

PREMISES AFFECTED—1723 Bath avenue, Brooklyn.

APPEARANCES—

For Petitioner: W. R. Redmond, John H. Schiernbeck.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Acting Fire Chief Martin, Superintendents Brady, Kleinert, Reville and Moore

Negative

Absent: Deputy Fire Commissioner Hannon and Superintendent McDermott

MINUTES

THE RESOLUTION:

(1-25-S)

WHEREAS, W. Rossiter Redmond, for John J. Schiernbeck, owner, filed, January 2, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the health commissioner, affecting premises 1723 Bath avenue, Brooklyn; and

WHEREAS, the decision of the health commissioner, rendered October 23, 1923, reads:

"At a meeting of the Board of Health of the Department of Health of the City of New York held October 23, 1923, your application for a sanitary certificate for a cellar and 1st floor bakery at 1723 Bath Avenue, in the Borough of Brooklyn, was denied.";

and

WHEREAS, the building is non-fireproof, three stories in height, 20 ft. by 75 ft. in area. OCCUPIED: Cellar, bakery; 1st story, store; 2nd story, dental parlor; 3rd story, one family; the height of bakery from floor to ceiling being 8 ft. 7 in.; the ceiling being 1 ft. 8 in. above curb level and floor 6 ft. 11 in. below adjoining ground level; the means of ventilation consisting of an open space in the ceiling to 1st story extension with skylight in roof; and

WHEREAS, petitioner contends that the bakery has been used as such continuously since 1913.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted.

252-25-S.

PETITIONER—B. Williams, for Elm Duane Corporation, lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—6 Reade street, Manhattan.

APPEARANCES—

For Petitioner: John J. Gilmartin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Acting Fire Chief Martin, Superintendents Brady, Kleinert, Reville and Moore 11

Negative 0

Absent: Deputy Fire Commissioner Hannon and Superintendent McDermott 2

THE RESOLUTION:

(252-25-S)

WHEREAS, B. Williams, for Max E. Butler, et al., owner, filed, March 4, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 6 Reade street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 28, 1924, reads:

"Order No. 66922-LD:

"2. Extend the interior stairway at the west side of the building to the roof, as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories in height, 25 ft. by 72 ft. in area; OCCUPIED as a tenant factory; 1st story, vacant; 2nd story, 8 persons; 3rd story, 2 persons; 4th story, 7 persons. EXITS: An interior wooden stairway extending from the 1st story to the 4th story, enclosed in wooden partitions with wooden doors at openings; a sub-standard fire escape on the front of the building, extending from the 4th story to the ground, an iron ladder from top story to roof scuttle; ROOFS of adjoining buildings being on same level; and

WHEREAS, petitioner claims the board of review has accepted the present conditions, and contends that the exits are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that the existing stairhall enclosure on the top story shall be extended to include the existing double rung iron ladder to scuttle in roof direct from top story hall, and granted only so long as conditions as to use and occupancy remain unchanged.

307-25-S.

PETITIONER—Alfred J. Boulton, for Fannie Ebersman, owner.

SUBJECT—Variation of labor law as cited in decision of health commissioner.

PREMISES AFFECTED—3218 Church avenue, Brooklyn.

APPEARANCES—

For Petitioner: Alfred J. Boulton, Fannie Ebersman.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Acting Fire Chief Martin, Superintendents Brady, Kleinert, Reville and Moore 11

Negative 0

Absent: Deputy Fire Commissioner Hannon and Superintendent McDermott 2

THE RESOLUTION:

(307-25-S)

WHEREAS, Alfred J. Boulton, for Fannie Ebersman, owner, filed, March 19, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the health commissioner, affecting premises 3218 Church avenue, Brooklyn; and

WHEREAS, the decision of the health commissioner, rendered March 4, 1925, reads:

"At a meeting of the Board of Health of the Department of Health of the City of New York, held March 4, 1925, your application for a permit to SANITARY CERTIFICATE FOR A CELLAR BAKERY, 3218 Church Avenue, in the Borough of Brooklyn, was denied.";

and

WHEREAS, the building is non-fireproof, three stories in height, 42 ft. by 25 ft. 8½ in. in area. OCCUPIED: Cellar, bakery; 1st story, store; dwellings above; the height of bakery from floor to ceiling being 8 ft.; the ceiling being level with curb, the floor being 1 ft. 6 in. above rear yard; the means of ventilation consisting of three windows to yard and two windows to front area; and

WHEREAS, petitioner contends that the bake oven was installed at the time of erection of building in 1911, and has filed a copy of the certificate of occupancy from the superintendent of buildings, which he claims is still in force; and

WHEREAS, there was a certificate of occupancy issued by the superintendent of buildings in 1911, and it is still in force, for a bakery and oven occupancy.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that the side walls shall be floated smooth in hard finish cement or lime mortar; that the ceiling shall be plastered three coats, hard finish, on metal lath, and that the three (3) windows as indicated on the plans shall open directly to the yard of same premises and be so maintained.

290-25-S.

PETITIONER—George Fred Pelham, for Castle Realty Co., owner.

MINUTES

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—442-450 West 31st street, Manhattan.

APPEARANCES—

For Petitioner: Ernest Fiense.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy,
Dowd, Gunnison, Acting Fire Chief Martin,
Superintendents Brady, Reville and Kleinert 8
Negative: Mr. Connell and Superintendent Moore 2
Absent: Mr. Holland, Deputy Fire Commissioner
Hannon and Superintendent McDermott 3

THE RESOLUTION:

(290-25-S)

WHEREAS, Bene M. Sylvan, for Castle Realty Co., owner, filed, March 16, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 442-450 West 31st street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered March 19, 1925, in acting on Alt. Application No. 2649-24, reads:

"10. As building is over 100 ft. in height wood floor surfaces unlawful. Section 264 of the Labor Law.";

and
WHEREAS, the building is fireproof, at present five stories, 67 ft. (proposed 12 stories, 160 ft.) in height, 83 ft. 4 in. by 102 ft. 6½ in. in area; OCCUPIED as a factory building for manufacturing food products; EQUIPPED with a fire alarm signal system; and

WHEREAS, petitioner claims that the manufacture of food products produces acids and strong alkali which cause rapid disintegration of cement floors, and contends the interlocking edge grained wood block flooring proposed has passed a satisfactory test to withstand chemical action.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that an edge grain wood block interlocking dovetail flooring shall be laid directly on the cement finished floor of concrete arches to an even finish without air space or pockets and only for and during the present use and occupancy of the building, for acid and alkali process used in conjunction with the manufacturing process of the business operated on these premises.

361-25-S.

PETITIONER—Henry Otis Chapman, for George C. Smith, owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—41 West 57th street, Manhattan.

APPEARANCES—

For Petitioner: Henry Otis Chapman, H. W. Veder.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy,
Dowd, Gunnison, Connell, Superintendents
Brady, Reville and Kleinert 8
Negative: Acting Fire Chief Martin and Superintendent Moore 2
Absent: Mr. Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 3

THE RESOLUTION:

(361-25-S)

WHEREAS, Henry Otis Chapman, for George C. Smith, owner, filed, April 2, 1925, a petition, with the board of

standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 41 West 57th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered March 20, 1925, in acting on N. B. Application No. 155-25, reads:

"1. An exterior enclosed stairway should be provided (Sec. 270-3, Labor Law).

"2. All interior trim and floors should be of incombustible materials (Sec. 264-6 of Labor Law).

"5. Windows should conform to requirements of Section 264-7 of Labor Law. No pane may exceed 720 square inches.";

and

WHEREAS, the building is to be fireproof, nine stories (102 ft.) in height, 34 ft. by 70 ft. 3 in. in area. OCCUPIED: Store, offices and 25 per cent of the floor area for manufacturing purposes, 28 persons on each story; equipped with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways extending from the 1st story to the roof, enclosed in fireproof partitions with fire doors at openings; all interior trim and floors to be of wood except stairways and exit halls, which will be fireproof; ROOFS of adjoining buildings are 2 ft. 4 in. below at west and 48 ft. above at the east side; windows on street front to be glazed with plate glass in metal frames; maximum sizes, 1st story, 8 ft. by 12 ft. 4 in.; 2nd story, 6 ft. 6 in. by 12 ft.; 3rd to 7th story, 6 ft. by 6 ft. 6 in.; 8th story, 3 ft. by 4 ft.; and

WHEREAS, petitioner contends that the area of building is small, exits are adequate and the height is but 2 ft. over the limiting height which would not require a fire tower.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted as to Item No. 1, on condition that not less than two (2) interior enclosed fireproof stairways shall be provided; granted, as to Item No. 2, on condition that the building shall not be extended in area, size or dimension; granted, as to Item No. 5 only so far as it affects the windows on the street front, on condition that all window openings above the 2nd story shall be equipped with approved metal frames and sash, glazed with wire plate glass; that a self-closing fireproof door, opening out in the line of travel, shall be provided at the foot of the rear stairs in the 1st story hall, with wire polished plate glass panel, not exceeding 320 sq. in. in area, and that any manufacturing occupancy of the building shall not exceed 25 per cent of the floor area, restricted to light industrial work.

276-25-S.

PETITIONER—William F. Conran, for Estate of J. P. Richards, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—13 East 31st street, Manhattan.

APPEARANCES—

For Petitioner: William F. Conran.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy,
Dowd, Gunnison, Connell, Acting Fire Chief
Martin, Superintendents Brady, Reville,
Kleinert and Moore 10
Negative 0

Absent: Mr. Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 3

THE RESOLUTION:

(276-25-S)

WHEREAS, William F. Conran, for Estate of J. P. Richards, owner, filed, March 11, 1925, a petition, with the board

MINUTES

of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of building and an order of the fire commissioner, affecting premises 13 East 31st street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered March 4, 1925, reads:

"With reference to your application for certificate of occupancy dated March 2, 1925, we beg to advise you that before certificate may be issued to supersede certificate No. 4734 the following objections must be removed:

"Fire escape stairs not extended to roof; doors in stair enclosure not self-closing; fireproof door to cellar not self-closing; no second means of exit from first floor to cellar.";

and

The order of the fire commissioner, dated March 5, 1925, reads:

"Order No. 70515-LD:

"1. Arrange the fire escape on the rear of the building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"NOTE: Among the defects noted on this fire escape are the following: Stairway does not extend to the roof. Doors leading to the balconies not self-closing. Terminates on roof of 2nd story extension and does not provide any means of egress from the 2nd story of building, and there is a passageway enclosed in fire resisting material instead of fireproof material leading to the interior stairway at 2nd story, thence to street by stairway, which is also enclosed in fire resisting material.

"2. Provide an additional required means of exit on the 2nd story, remote from the existing stairway, preferably located at the north side of building, in accordance with the requirements of Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories in height, 20 ft. 10 1/2 in. by 86 ft. in area at the 2nd story and 65 ft. deep on stories above. OCCUPIED: Cellar, storage; 1st story, store; 2nd to 5th stories, inclusive, manufacturing of dresses, 25 persons on each story; none in cellar; equipped with a fire alarm signal system. EXITS: An interior non-fireproof stairway, extending from the 1st story to the roof, enclosed in fire-resisting partitions, with fire doors at openings; a sub-standard fire escape on the rear of the building, extending from the 5th story to the roof of 2nd story extension; a gooseneck ladder from 5th story balcony to roof, with egress from the termination of fire escape by means of hall enclosed with fire-resisting partitions to main stairhall; ROOFS of adjoining buildings are at same level at west and three stories higher at east side; and

WHEREAS, petitioner proposes to provide a 45 degree stairway from 5th story fire escape balcony at rear to roof; to make all windows on the course of fire escape fireproof and self-closing and to make all doors in stair enclosure and to cellar fireproof, self-closing, and contends that the exits would then be adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, only so far as it affects egress from the roof of extension at the 3rd story by passageway enclosed in fire-resisting material; granted, as to Item No. 2, on condition that a balcony shall be provided at the 2nd story in the rear, with a gooseneck ladder to the roof of extension and counterbalanced drop ladder in guides to the yard to the west, and that one of the present fireproof win-

dows in the rear of the 2nd story shall be replaced with self-closing fireproof casement door with iron steps to sills, and that a stairway shall be provided from the rear of cellar to the 1st story enclosed in fire-retarding material with self-closing fireproof door at the foot of same, and that the orders in other respects be complied with.

80-25-S.

PETITIONER—Samuel Cohen, for Michael C. A. Formato, lessee.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—23 West 56th street, Manhattan.

APPEARANCES—

For Petitioner: Max Siegel.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore 9

Negative 0

Absent: Messrs. Kennedy, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 4

THE RESOLUTION:

(80-25-S)

WHEREAS, Samuel Cohen, for Irene K. Wise, owner, filed, January 20, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 23 West 56th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered January 16, 1925, reads:

"1. Stairway must continue to roof.

"4. A secondary means of egress must be provided from all floors, same to be in accordance with Labor Law.

"5. All windows on rear and sides must comply with Section 264-7 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories, basement and cellar in height, 25 ft. by 95 ft. in area in the basement, 1st, 2nd and 3rd stories and 25 ft. by 60 ft. in area on the 4th story. OCCUPIED: Basement, factory, 12 persons; 1st story, show rooms, 4 persons; 2nd story, studio and dwelling; 3rd and 4th stories, dwelling. EXITS: An interior wooden stairway, extending from the 1st story to the top story, enclosed in wood stud and plaster partitions with wooden doors at the openings; no fire escape; a proposed 60 degree fire escape on the rear of the building; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that it would be a hardship to fireproof the windows at the rear of the premises as they are ornamental, and further contends that in view of the factory occupancy being on the basement story only, that the existing means of exit are ample.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that a fixed double rung iron ladder shall be provided within the stairhall enclosure in the top story to scuttle in roof; granted, as to Item No. 4, on condition that a fire escape shall be provided at the rear of the main building with balconies not less than 4 ft. wide, with 60 degree connecting stairs from the yard to the roof, with egress from termination by means of fire-resisting passageway direct to the street at the 1st story level, any openings therein provided with self-closing fire doors; granted, as to Item No. 5, on condition that all windows

MINUTES

on the course of the fire escape shall be made fireproof, self-closing; *granted* only so long as the conditions as to occupancy and use remain unchanged.

28-25-S.

PETITIONER—Samuel Cohen, for Alice Hoffman, owner.
SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—17 East 54th street, Manhattan.

APPEARANCES—

For Petitioner: Max Siegel.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore	8
Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott	5

THE RESOLUTION:

(28-25-S)

WHEREAS, Samuel Cohen, for Alice Hoffman, owner, filed, January 8, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 17 East 54th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 3, 1924, reads:

"Order No. 69167-LD:

"1. Extend the interior stairway at the west side of building to the roof, as per Section 271 of the Labor Law.

"2. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law * * *.

"Among the defects noted on this fire escape are the following:

"Windows on course not fireproof, self-closing. No balcony provided on 4th story, roof extension. No safe passageway from termination to street.";

and

WHEREAS, on April 21, 1925, this case was amended to include the following objection of the superintendent of buildings:

"Before a Certificate of Occupancy may be issued it will be necessary to extend the interior stairs to the roof and arrange the fire escape on the rear of building to comply with Section 271 of the Labor Law. Among the defects noted are the following:

"Windows on course of fire escape not fireproof, self-closing; no balcony provided at 4th story roof extension; no safe passageway from termination of fire escape to street; no knobs on doors leading to fire escape.";

and

WHEREAS, the building is non-fireproof, five stories in height, 20 ft. 10 in. by 100 ft. in area at the 1st, 2nd and 3rd stories and 20 ft. 10 in. by 60 ft. in area on the 4th and 5th stories. OCCUPIED: 1st story, stores and 25 per cent manufacturing, 30 persons; upper stories, showrooms and 25 per cent manufacturing, 48 persons above the 1st story. EXITS: An interior wooden stairway, extending from the 1st story to the top story, with ladder to scuttle in roof, enclosed in fire-retarding partitions with kalameined doors at openings; a fire escape with non-fireproof windows along the course thereof, on the rear of the main building, extending from the main roof to the roof of the three-story extension, with egress across this roof to a fire escape

on the easterly side of the extension, with balconies and stairs to yard; with egress from the termination of fire escape by means of steps to adjoining yard to east; ROOFS of adjoining buildings are at the same level; and

WHEREAS, petitioner proposes to fireproof the windows along the course of the fire escape and also to have the occupancy of each story limited to six (6) persons.

Resolved, that the order of the fire commissioner and the decision of the superintendent of buildings be and they hereby are *affirmed*, and the petition be and it hereby is *denied*.

178-25-S.

PETITIONER—Charles Meyer, for Samuel Weil, owner.
SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—391 Washington street, Manhattan.

APPEARANCES—

For Petitioner: Charles Meyer.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition denied.

THE VOTE TO GRANT—

Affirmative: Superintendent Reville	1
Negative: Chairman Walsh, Messrs. Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Kleinert and Moore	7
Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott	5

THE RESOLUTION:

(178-25-S)

WHEREAS, Charles Meyer, for Samuel Weil, owner, filed, February 13, 1925, a petition, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 391 Washington street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 24, 1924, reads:

"Order No. 66715-LD:

"1. Remove the sub-standard fire-escape on north side of building or reconstruct same in accordance with Section 274 of the Labor Law, except that in lieu of a counterbalanced stair, a drop ladder in guides from the lowest balcony to the ground may be provided, as per Rule amended by the Board of Standards and Appeals May 9, 1924.";

and

WHEREAS, the building is non-fireproof, six stories in height, 75 ft. by 79 ft. 10 in. in area. OCCUPIED: 1st and 2nd stories, shipping and offices; upper stories, packing and storage of olives; 45 persons in entire building; equipped with a fire alarm signal system. EXITS: An interior wooden stairway, extending from 1st story to roof, enclosed in wire lath and cement plaster partitions with kalameined doors at openings; a sub-standard fire escape on the north wall of the building and also a fire escape on the west side of the building, extending from the roof to 2nd story, with counterbalanced stair to street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the sub-standard fire escape is in excess of all required legal exits and may be used as an additional means of exit in an emergency, and proposes to show by means of signs that it is not an exit.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

PREMISES AFFECTED—138 West 34th street, Manhattan.

APPEARANCES—

For Petitioner: Morris M. Greenberger.

ACTION OF BOARD—Petition reopened and resolution modified.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

THE RESOLUTION:

(99-22-S)

WHEREAS, Samuel Rosenblum, for Albert Levi, owner, filed, January 24, 1922, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 138 West 34th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"1. Plan of vestibule is not clear; obstruction by showcase not permitted. (Also egress from the fire escapes must be through a fireproof passageway and so indicated on plans.)";

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 98 ft. 9 in. in area. OCCUPIED: 1st story, store; 2nd story, salesrooms, 8 persons; 3rd story, men's tailor, 30 persons; 4th story, furrier, 5 persons; 5th story, cloaks and suits, 13 persons; the means of egress consisting of an interior stairway extending from the 1st story to the roof, enclosed in fire-resisting partitions with kalameined doors at the openings, a fire escape on the rear of the building with landing on roof of extension in the 2nd story, with counterbalanced stairway to adjoining yard and with fireproof windows on the course of the fire escape, one on each story being a casement sash; and

WHEREAS, petitioner contends that the show window in the entrance hall is permanently built in and rigid and that there is a fireproof door directly from the entrance to the hallway shutting off the stairway and hallway from this show window; and

WHEREAS, the petitioner, in view of the light occupancy, requests that the means of exit be considered adequate; and

WHEREAS, this petition was granted by the board at its meeting, April 11, 1922, and April 7, 1925, on certain conditions, and petitioner now requests a modification of these conditions as to egress from the termination of fire escapes, egress to adjoining yard being blocked.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted* as to egress from the rear fire escape by means of a direct connection from the 2nd story extension to the extension roof of the adjoining premises, with egress therefrom through plain glass windows, *on condition* that consent of the adjoining owner is filed with the bureau of buildings, and that the conditions remain unchanged; that the occupancy of the 3rd story be limited to 30 persons or the legal capacity of the stairway, and that the decision of the superintendent of buildings as to the vestibule and extending hall partitions to the street be and it hereby is *affirmed*, and the petition as to this item be and it hereby is *denied*.

CASE DISMISSED.

The chairman called attention to the following case, where notice of intention to petition was offered for filing; but where, despite notices from this office, papers have not

been completed, thus tying the hands of the administrative official in the performance of his duty:

(1165-24-S)

Filed September 25, 1924—Premises 161-163 Perry street, Manhattan. Order of the fire commissioner, labor law. Petitioner, Geo. M. Wood. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

THE RESOLUTION:

(1165-24-S)

WHEREAS, the foregoing petitioner has filed with the board of standards and appeals petition for variation from the requirements of the labor law as cited in an order of the fire commissioner affecting the premises in question; and

WHEREAS, the petitioner has failed to complete his papers, though duly notified to do so.

Resolved, that the foregoing petition be and it hereby is *dismissed* for lack of prosecution.

APPLIANCES SUBMITTED FOR APPROVAL.

259-25-SA.

PETITIONER—Automatic Oil Burner Corp.

SUBJECT—Approval of Electrol Automatic Oil Burner.

APPEARANCES—None.

ACTION OF BOARD—Petition placed on reserve calendar pending report of committee of inspection.

1200-24-SA.

PETITIONER—Robert H. Law, Jr., for Berkins Oil Burner Company.

SUBJECT—Approval of Berkins Oil Burner.

APPEARANCES—None.

ACTION OF BOARD—Petition withdrawn on request of petitioner.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Messrs. Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

1314-24-SA.

PETITIONER—U. S. E. M. Company.

SUBJECT—Approval of USEM A. C. Fire Alarm Panel.

APPEARANCES—None.

ACTION OF BOARD—Petition approved in accordance with report of bureau of fire prevention of the fire department.

THE VOTE TO APPROVE—

Affirmative: Chairman Walsh, Messrs. Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

THE RESOLUTION:

(1314-24-SA)

WHEREAS, the U. S. E. M. Co. filed, November 7, 1924, a petition, with the board of standards and appeals, for approval of their device known as the U.S.E.M. A. C. and D. C. Control Panels; and

WHEREAS, this matter was submitted to the fire department for test and report, and the report of the chief of

MINUTES

the fire prevention bureau, dated May 15, 1925, recommends the approval of the device.

Resolved, that the board of standards and appeals does hereby *approve* the device known as the U.S.E.M. A. C. and D. C. Control Panels, when installed in accordance with the report of the chief of the fire prevention bureau.

CASES DISMISSED.

Appliances for Approval.

The chairman called attention to the following cases, where notices of intention to petition the board for approval were offered for filing, but where, despite notices from this office, papers have not been completed:

(1040-24-SA)

Filed August 14, 1924—Approval of Tiffany Fuel Oil Burner. The Tiffany Oil Burner Co. Dismissed for lack of prosecution.

(1521-24-SA)

Filed December 26, 1924—Approval of Croker Fire Alarm Control Board and Gong. Petitioner, The

Croker Electric Co., Inc. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Gunnison, Connell, Acting Fire Chief Martin, Superintendents Brady, Reville, Kleinert and Moore 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Holland, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

THE RESOLUTION:

WHEREAS, the foregoing petitioners have filed with the board of standards and appeals petitions for approval of their devices; and

WHEREAS, the petitioners have failed to complete their papers, though duly notified to do so.

Resolved, that the foregoing petitions be and they hereby are *dismissed* for lack of prosecution.

Adjourned 5.45 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

MINUTES

*CORRECTION.

The correction of the minutes of the meeting of the board of standards and appeals held Tuesday afternoon, October 30, 1923, as they appeared in Bulletin No. 19, Vol. X, are hereby corrected to read as follows:

(809-23-S)

WHEREAS, John A. McCooey, Jr., and H. E. Horwood, representing Croker Nat'l Fire Prev. Eng. Co., for Pyramid Playing Card Co., owner, filed, June 25, 1923, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 351-3 Jay street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 28, 1922, reads:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof * * *.

"NOTE: Among the defects noted on this fire escape are the following:

"No 45 degree connecting stairways between balconies.

"No passageway from termination of fire escape to street.";

**Correction—The words "correction of the" inserted in first line of notice.*

WHEREAS, the building is non-fireproof, seven stories in height, 50 ft. by 100 ft. in area; equipped with sprinkler system. EXITS: One interior stairway enclosed in a wooden partition, metal covered on loft side, with metal covered doors at openings; two sub-standard fire escapes, and a fire escape with fire doors and windows along course on rear of building extending from roof to 1st story with EGRESS consisting of a stairway from the 1st story balcony up to the roof of a one-story garage at the rear; occupied as tenant factory, 81 persons in the entire building; and

WHEREAS, petitioner requests that owing to light occupancy of the building and the hardship involved, the existing stairway be accepted as adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted on condition* that an iron stairs shall be provided from the termination of the rear fire escape on the 2nd story to the roof of the garage, the ceiling of which is fire retarded, and that a portable iron ladder shall be provided on the front of the roof of garage and counterbalanced drop ladder in guides shall be provided to the fire escape on front of building, and that all windows on the course of the rear fire escape shall be made self-closing with the exception of the top story; *granted* only so long as the conditions as to occupancy and use remain unchanged.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

RULES

FIRE ESCAPE RULES

Fire Escape Rules of the Board of Standards and Appeals, adopted July 2, 1918, Cal. No. 1218-18-S; Amended Dec. 12, 1918; Cal. No. 1708-18-S; Amended May 9, 1924, Cal. No. 414-24-SR.

Rule 1. In any building erected prior to October 1, 1913, now occupied or to be occupied as a factory, more than five stories in height and not exceeding nine stories in height, nor in any case more than 90 ft. from curb level to top floor level, one of the required means of exit or escape under Section 271-1 of the Labor Law may consist of an outside fire escape, provided that:

(a) Any such fire escape hereafter erected shall comply with all the provisions of Section 273, labor law, and in addition thereto:

(1) The balconies and stairs shall be protected on the outside by substantial railings to a height of at least 4 ft. 6 in., measured from floor of balcony or center of stair tread, constructed of bars at least one-half ($\frac{1}{2}$) inch in diameter, spaced not more than six (6) inches on centers, or of substantial grill work, or of screening not less than No. 10 U. S. gauge wire with not more than one and one-half ($1\frac{1}{2}$) inch mesh, all rigidly braced;

(2) When there is safe egress from the roof of the building to any adjoining structure, the fire escape stairway shall continue to the roof, and if there be no safe means of egress, a gooseneck ladder shall be provided from the top story balcony to the roof.

(b) Any such fire escape erected prior to October 1, 1913, shall conform in every respect with the requirements of paragraph (a) of this rule, except that balconies may be not less than 3 feet in width; the connecting stairs not less than 20 inches in width, and placed at an angle not exceeding 60 degrees if the building is not over six stories in height, otherwise at an angle of 45 degrees; fire windows leading to balconies may be at window sill level if fixed steps not less than sixteen (16) inches wide are provided on the inside from floor level, leading thereto.

(c) Any such fire escape erected subsequent to October 1, 1913, and prior to these rules taking effect, unless previously accepted as one of the required means of exit or escape by the administrative official having jurisdiction, shall conform in every respect to paragraph (a) of this rule.

Rule 2. A fire escape shall not hereafter be accepted as constituting one of the required means of exit or escape under Section 271-1 of the Labor Law, in any building

erected prior to October 1, 1913, now occupied or to be occupied as a factory, exceeding nine stories in height, or more than 90 feet from curb level to top floor level.

Rule 3. When in addition to the required exits from any factory or factory building, there exist other means of egress which are not entirely in accordance with the requirements of the Labor Law and the Rules of the Board of Standards and Appeals, such means of egress may be retained under the following conditions:

(a) Fire Escapes.—All substandard fire escapes on factory buildings shall be removed or reconstructed in accordance with Section 274 of the Labor Law, except that in lieu of a counterbalanced stair a drop ladder in guides from the lowest balcony to ground may be provided. Substandard fire escapes shall not be considered as a basis for increased occupancy of the building. When such substandard fire escapes are located in any court or on the side or rear of a building, proper egress to a point of safety shall be provided, either to open adjoining yards, or the lowest balcony may be connected to an adjoining fire escape, exterior stairway, or to roof of adjoining extension, or other egress satisfactory to the Fire Commissioner. All such fire escapes shall be maintained structurally safe and properly painted.

(b) Interior Stairways.—All interior stairways not conforming to the requirements of the Labor Law or rules of the Board of Standards and Appeals may be retained, provided that egress to same is maintained unobstructed, halls are properly lighted, and all landings, passageways, etc., are maintained free and unobstructed. An easily operated panic bolt or other similar device may be installed at street exit door.

(c) Exterior Screened Stairways.—Exterior screened stairways not serving as a required means of egress shall be either removed or maintained structurally safe and properly painted, exits thereto and all platforms and passageways thereof shall be maintained unobstructed, and egress from termination shall be provided for sub-standard fire escapes in subdivision a.

(d) Horizontal Bridges.—Horizontal bridges and party wall balconies between buildings shall be removed or maintained structurally safe and properly painted, and access thereto and all passageways thereof shall be maintained unobstructed.

(e) No sign of any character shall be placed at openings leading to these sub-standard exits.

RULES

COMMUNITY LAUNDRIES IN BUSINESS DISTRICTS

Amended Resolution Adopted by the Board of Appeals, March 16, 1920, Under Cal. No. 549-17-BZ.

WHEREAS, the board of appeals, at its regular meeting, December 16, 1919, unanimously rescinded an opinion incidentally expressed and incorporated in a resolution adopted by the board on May 28, 1917, in acting on Cal. No. 549-17-BZ. This opinion was that a laundry is not a prohibited use in a business district under the building zone resolution. The board unanimously rescinded this expression of opinion, inasmuch as a laundry is a factory within the meaning of the labor law and must be so construed

under the building zone resolution in the absence of any definition therein to the contrary.

Resolved, that this shall not be construed to include within the prohibited uses specified under Section 4 of the building zone resolution a community or neighborhood laundry located in the basement or ground floor of a building within a business district and containing not more than eight (8) rotary washing machines with inside cylinders not more than 30 in. in diameter by 30 in. in length over all nor more than two 20 in. extractors, the 20 in. measurement being the diameter of the inside basket, which machines and extractors shall be operated solely by electric power and do not require the installation of steam boiler or plant.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES-- SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, May 29, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

ures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and fire hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof. may be used in lieu of heads located in peak of roof.

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overflow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

At the base of the main riser;

At each alarm valve;

At each dry-pipe valve;

At each gravity tank;

At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

Above dry-pipe valves;

Below dry-pipe valves;

At the pressure tank;

At the air compressor;

Above the alarm valve;

Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads40
- (b) For Conran* one (1) inch heads10
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 6

Where equipped with an approved quick-opening device, the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads80
- (b) For Conran* one (1) inch heads20
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 12

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads50
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to
12 noon.

All communications should be addressed to the chairman
of the board.

CONTENTS

This issue of the Bulletin contains, in the order
given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Minutes of Meeting, Board of Appeals, May 26,
1925.

Minutes of Special Meeting, Board of Appeals, May
26, 1925.

Reserve Calendar.

Notice of Public Hearing.

Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.

Special meetings as listed in this Calendar.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

Board of Standards and Appeals, as listed in the Cal-
endar.

All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013, Tuesday, June 2, 1925,
at 2 o'clock. At this call each case is set for hearing
on a definite day.

The next subsequent Call of the Calendar will be on
Tuesday, June 9, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in
connection with which court proceedings are pending or in
progress, nor accepted that are not filed within twenty
days from the date of the action of the Administrative Of-
ficial.

Any communication purporting to be an appeal, applica-
tion or petition shall be regarded as a mere notice of in-
tention to seek relief until it is filed on the form required
by the rules of this board.

Upon receipt of any such communication the writer will
be supplied with the official forms for presenting his ap-
peal, application or petition, and if he fails to supply the
data required thereon, within twenty days, his case may be
dismissed for lack of prosecution.

At the time of filing an application, the appellant or peti-
tioner shall forward a signed notice of appeal addressed
to the administrative official (either superintendent of build-
ings or fire commissioner) and file with this board a dupli-
cate of said notice.

Petitioners are advised that their plans must indicate the
points of the compass so as to establish the true location and
position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and
expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

311-25-A.
APPELLANT—Samuel Rosenblum, for Gothard Lowenstein, owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—931-939 Carroll street, Brooklyn.

APPEARANCES—
For Appellant: Samuel Rosenblum.
For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(311-25-A)

WHEREAS, Samuel Rosenblum, for Gothard Lowenstein, owner, filed, March 20, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises at Nos. 931-939 Carroll street, Borough of Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered March 13, 1925, reads:

"New Building Application No. 812-13:

"1. Main conditions as shown by letter from Department of Water, Gas and Electricity are such that the omission of gravity tank would be contrary to Rule No. 8a of Board of Standards and Appeals Rules adopted June 27, 1922, amended July 20th, 1923.";

and

WHEREAS, the building is non-fireproof, one story in height, 135 ft. by 131 ft. (irregular) in area; OCCUPIED as a public garage; and

WHEREAS, appellant contends that the garage is only one story in height and that owing to the railroad cut directly adjoining the premises to the west, the 8 in. city water main in the street terminates in front of the building and cannot, therefore, be fed two ways, and contends further that there is a 30 pounds per inch pressure in said 8 in. main (as per filed letter from the department of water supply, gas and electricity), which affords a greater and more constant supply to the 4 in. standpipe system now installed in the premises.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted only as to omission of tank to standpipe system on condition that a direct connection to city main, of not less than a 4 in. connection, be provided; and that a 40-gallon approved portable fire extinguisher shall be maintained on the premises.

164-25-A.

APPELLANT—Isaac Riesfeld, for Anna Reisfeld, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—303 East 170th street, The Bronx.

APPEARANCES—

For Appellant: Isaac Riesfeld.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Connell, Holland and

Fire Chief Kenlon

Negative

Absent: Mr. Kennedy

THE RESOLUTION:

(164-25-A)

WHEREAS, Isaac Reisfeld, for Anna Reisfeld, owner, filed, February 9, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises No. 303 East 170th street, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, dated June 19, 1924, reads:

"(A) More than two stories immediately above the garage are occupied as a dwelling. Section 154, Chapter 10, Code of Ordinances."

and

WHEREAS, the building is non-fireproof, three stories and basement in height, 25 ft. by 70 ft. in area. OCCUPIED: Basement, garage and boiler room; 1st story, store; 2nd and 3rd stories, dwellings. Party wall fire escape balconies on the 2nd and 3rd stories; and

WHEREAS, appellant contends that the garage portion of the premises is separated from the remainder of the building by 20 in. brick walls and a ceiling constructed of 4 in. hollow tiles, 2½ in. of cement and ½ in. plaster boards, and contends further that the garage is used only by the tenants of the building; and that the building is equipped with party wall balcony fire escapes.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the dimensions of the garage storage area shall be limited to a width of 18 ft. 6 in. and a depth of 20 ft., located at rear of the basement story; that its use and operation shall be restricted to the owner or occupant living on the premises; that the walls of the garage enclosure of the structure shall be unpierced other than the exit doors; that the side walls shall be fire-stopped above masonry to the ceiling line; that the ceiling shall be fire-retarded in accordance with the rules of the board of standards and appeals; and on further condition that a party wall fire escape shall be provided and maintained for the dwelling occupancy on the 2nd and 3rd stories; and that there shall be no gasoline storage equipment maintained on the premises.

414-25-A.

APPELLANT—M. E. Doyle, for Coney Island & Brooklyn R. R. Co., owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—North side of DeKalb avenue 200 feet west of Onderdonk avenue, Ridgewood, Borough of Queens.

APPEARANCES—

For Appellant: T. Carswell, J. A. Boland, M. E. Doyle and Joseph J. Milton.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Holland

Negative

Absent: Fire Chief Kenlon

THE RESOLUTION:

(414-25-A)

WHEREAS, Michael E. Doyle, for Coney Island & Brooklyn R. R. Co., owner, filed, April 17, 1925, an appeal, with the board of appeals, from a decision of the superintendent of buildings, affecting premises north side of DeKalb avenue and 200 ft. west of Onderdonk avenue, Ridgewood Borough of Queens; and

WHEREAS, the decision of the superintendent of buildings rendered April 6, 1925, in acting on Alt. Application No. 640-25, reads:

"3. The following is contrary to the zoning law

"(a) Repair shop for railroad cars in a business district.

"(b) Blacksmithing in a business district.

"4. The following is contrary to Building Code:

"(a) Non-fireproof building exceeding 15,000 square feet."

and

WHEREAS, the building is non-fireproof, one story in height, 150 ft. by 700 ft. in area; OCCUPIED as a car barn and repair shop, 300 persons; the building being located in a business district under the building zone resolution; it is proposed to extend the existing building, the extent being approximately 54 ft. 2 in. by 519 ft. 8 in., irregular, and

WHEREAS, appellant contends that the premises has been used as a car barn for the alteration and repair of cars since 1903 and neither the existing building nor the proposed extension occupy the bed of any streets the property of the City of New York, said streets having been expressly excluded by the Supreme Court of the State of New York by legal opening; that the provisions of the building zone resolution do not prohibit a repair shop for railroad cars with necessary blacksmithing accompanying it; that the existing building is of concrete, brick and steel, with wooden roof covered with tar and gravel; that the proposed extension is to be constructed in the same manner as the existing building and that it is impracticable to provide exits within 100 ft. of all points in the building owing to the character of the building.

Resolved, that the decision of the superintendent of buildings be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 3a, on condition that repair shop shall be restricted to such repairs incidental to the conduct and operation of a railroad car barn, operated in conjunction therewith; as to Item 3b, on condition that such blacksmithing work shall be incidental to the use and operation of railroad car barn operated in conjunction therewith; denied, as to Item 4.

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and

Holland

Absent: Fire Chief Kenlon

MINUTES

THE RESOLUTION:

(1410-24-A)

WHEREAS, Jacob Nash, for Wolins Merchandise Company, owner, filed, November 28, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises at No. 52 Lispenard street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated September 17, 1924, reads:

"Order No. 42K52.11:

"1. Separate portion of premises where combustible fibres are stored from the remainder of the building by walls, floor and ceiling protected by fire retarding material and with all floor openings similarly protected and constructed in a manner approved by the Fire Commissioner. Section 24-6, Chapter 12, Code of Ordinances."

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. 8 in. by 90 ft. 2 in. in area. OCCUPIED: 1st story, store; 2nd story, vacant at present; 3rd story, occupied by appellant for the storage of five tons of woolen clippings, 2 persons; 4th story, manufacture of jewelry cases, 3 persons; 5th story, store for men's clothing; the means of egress consisting of a wooden stairway enclosed in wooden partitions and a sub-standard fire escape on the front of the building; and

WHEREAS, appellant contends that no baling is done on the premises and that the storage consists of baled woolen clips; that aisle spaces to exits are provided and that water pails are distributed throughout the premises in question.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

239-25-A.

APPELLANT—Han A. Kunitz, for Empire State Ice Company, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—890 Grant avenue, The Bronx.

APPEARANCES—

For Appellant: H. A. Kunitz and D. B. Morrow.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Holland 6

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(239-25-A)

WHEREAS, Han A. Kunitz, for Empire State Ice Company, owner, filed, February 24, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises at No. 890 Grant avenue, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, dated November 28, 1924, reads:

"Order No. 26571-LC:

"1. Provide easy access to outside of each fuel oil storage tank for inspection, as per Rule 7, Sec. 3 of the Fuel Oil Rules.

"2. Provide a hydrostatic test for tank as required by the Board of Standards and Appeals in the presence of an inspector of this department.

"5. Provide a hydrostatic test of not less than 150 pounds per square inch for all fuel oil carrying piping of a normal working pressure of less than 100 pounds, as per Rule 8, Sec. 3 of the Fuel Oil Rules.

"9. Provide Fuel Oil Burner or Burners of a type approved by the Board of Standards and Appeals, as per Rule 12."

and

WHEREAS, the building is fireproof, one story in height, 136 ft. by 109 ft. 6 in. in area; OCCUPIED as an ice manufacturing plant, 12 persons in entire building; and

WHEREAS, a fuel oil burning system has been installed consisting of a 2,250-gallon fuel oil storage tank, buried underground, outside the building, a pump, a "Newport" burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the tank and piping are buried in concrete and that they were tested at the time of installation, and requests the acceptance of an affidavit to this effect, and contends further that an application for the approval of the "Newport" burner is on file with the board.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 2 and 5, on condition that an air test shall be made under existing conditions in the presence of a member of the fire prevention bureau, said test to be maintained for not less than 6 hours without loss of pressure; as to Item 9, granted, for a temporary period of ninety (90) days, at owner's risk, subject to action of the board of standards and appeals on petition pending as to approval of Newport burner, on condition that the fuel oil burning equipment otherwise complies with the fuel oil rules in all respects.

THE RESOLUTION:

(132-25-BZ)

WHEREAS, Samuel Cohen, for Sherman-Fulton Co., Inc., owner, filed, January 29, 1925, an application, under the building zone resolution, to permit in a residence district the alteration and conversion of occupancy of a building from residence use to a business use on the 1st story only; premises 321 West 118th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 26, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Manhattan avenue is a residence district and West 118th street is a business district; and

WHEREAS, the decision of the tenement house commissioner, rendered January 22, 1925, reads:

"1. Creating of stores in a residence district is unlawful; said stores are in violation of the Building Zone Resolution. Not further considered."

and

WHEREAS, the existing building is of non-fireproof construction, five stories in height, with a frontage of 25 ft. and a depth of 91 ft.; occupied as an apartment house;

MINUTES

it is proposed to alter the building on the 1st story, Manhattan avenue front, and use said portion as stores; and

WHEREAS, the board deemed that applicant did not establish his basis of appeal under section 21, namely, hardship.

Resolved, that the decision of the tenement house commissioner be and it hereby is affirmed, and the application be and it hereby is denied.

292-25-BZ.

APPLICANT—Samuel Marer, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2621-2631 Aqueduct avenue, The Bronx.

APPEARANCES—

For Applicant: Maurice Deiches and Samuel Marer.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Holland..... 5

Negative: Mr. Connell 1

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(292-25-BZ)

WHEREAS, Samuel Marer, owner, filed, March 16, 1925, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 2621-2631 Aqueduct avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 26, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Aqueduct avenue and University avenue are residence districts and Kingsbridge road is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 25, 1925, in acting on N. B. A. Application No. 335-25, reads:

"1. Erection of proposed garage for the storage of more than five motor vehicles in business and residence district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 150 ft. and a depth of 109.25 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed, in light of surrounding conditions, that it would be a hardship to deny the variation for the erection of the proposed garage abutting an existing garage, the property on the other side to be developed for business purposes.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building be restricted in height to one story; that the rear and gable walls be unpierced throughout their entire height and length; that the proposed garage shall not exceed an area of approximately 109 ft. 3 in. in depth by 150 ft. frontage, located not less than 86 ft. southerly from Kingsbridge road, and shall be erected only on condition that the proposed conforming use adjoining to the north on Kingsbridge road, namely, retail shop and store structure, shall be erected

at the same time and in conjunction therewith; that there shall be no vehicular entrance within 50 ft. of the southerly gable wall on the Aqueduct avenue front; that the front elevation shall be finished with face brick and architectural terra cotta or stone trimmings; that a return drawing of the design of proposed facade shall be made to this board for approval before submitting same to the superintendent of buildings; that any gasoline storage equipment installed shall be located at the extreme northerly end, street front, of the proposed garage; that there shall be no signs or advertising of any nature or description displayed on the premises, except one projecting electric sign indicating title of garage, and no roof sign erected; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within 18 months from the date of this action.

249-25-BZ.

APPLICANT—Peter P. Smith, for Bay Ridge Savings Bank, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a business building to be used for banking purposes.

PREMISES AFFECTED—5315-5325 Fifth avenue, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

THE RESOLUTION:

(249-25-BZ)

WHEREAS, Peter P. Smith, for Bay Ridge Savings Bank, owner, filed, March 25, 1925, an application, under the building zone resolution, to permit the extension, from a business district into a residence district, of a proposed business building to be used for banking purposes; premises 5315-5325 Fifth avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 26, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fifth avenue is a business district, 54th street and 53rd street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 22, 1925, in acting on App. No. 38-25, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 3. The erection of a bank building partly in a residence district."

and

WHEREAS, the proposed building is to be of fireproof construction, three (3) stories in height, with a frontage of 74 ft. 8 in. on Fifth avenue and a depth of 125 ft. on 54th street; to be occupied as a bank, a portion of premises 25 ft. in depth being in the residence district; and

WHEREAS, the board deemed that applicant established his basis of appeal under sections 21 and 7-c of the building zone resolution, and that the proposed extension will provide a community requirement.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application

MINUTES

be and it hereby is *granted on condition* that the exposed rear and gable walls be finished in light-faced brick; that the street facade of the building be finished in face brick or natural stone; that there shall be no advertising signs exposed or displayed on the premises within the residence area of the property; that a return drawing of finished elevations of the street fronts be made to this board for approval before submitting same to the superintendent of buildings; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within 18 months from the date of this action.

244-24-BZ.

APPLICANT—Richards, Smyth & Conway, substituted for S. Millman & Son, for Morris Angert, owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

THE VOTE TO REOPEN AND MODIFY—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell	6
Negative	0
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

(244-24-BZ)

WHEREAS, S. Millman & Son, for M. Angert and E. Edinger, owners, filed, April 30, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1761-1765 Bushwick avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 26, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Bushwick avenue and Fanchon place are business districts and Pellington place is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 28, 1924, in acting on Application No. 9279-24, reads:

"Denied, proposition contrary to the zone resolution, Art. II, Sec. 4. A public garage in a business district."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 60 ft. 6¾ in. and a depth of 137 ft. 6 in.; to be occupied as show-rooms and garage for more than five motor vehicles; and

WHEREAS, applicant has filed the duly acknowledged consent of the owners of 95 per cent of the property frontage deemed by the board to be affected; and

WHEREAS, this application was granted by the board at its meeting July 22, 1924, on certain conditions, and owner, through his attorneys, requested a modification of these conditions as to the use of premises for minor adjustments and repairs and painting of automobiles.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure

be limited to one story in height above grade; that the rear and side walls be unpierced throughout their entire height and length, with the exception of an emergency exit in the rear to property in the same ownership; that the front of the building be finished in face brick, with architectural terra cotta or stone trimmings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within 18 months from the date of this action.

Resolved, further, that this variation also permits such repairs and adjustments as are incidental to the conduct and operation of a garage, *on condition* that no motor-driven machinery be employed or used in making such repairs and permits the painting of automobiles.

809-24-BZ.

APPLICANT—Cass Gilbert, for New York Insurance Co., owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a business two times height district the erection of the street walls of a building to a height exceeding the limit required under the building zone resolution.

PREMISES AFFECTED—North side of East 26th street, south side of East 27th street from Fourth avenue to Madison avenue, Manhattan.

APPEARANCES—

For Applicant: Frederick G. Stickel.

For Opposition: None.

ACTION OF BOARD—Granted extension of time to obtain permits.

THE VOTE TO EXTEND TIME—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland and Connell..	5
Negative	0
Absent: Mr. Kennedy and Fire Chief Kenlon	2

THE RESOLUTION:

(809-24-BZ)

WHEREAS, Cass Gilbert, for New York Life Insurance Co., owner, filed, June 16, 1924, an application, under the building zone resolution, to permit in a business two times height district the erection of the street walls of a building to a height exceeding the limit set by the building zone resolution; premises block bounded by 26th street, 27th street, Fourth avenue and Madison avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, September 30, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that the premises are located in a business and two times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 4, 1924, in acting on N. B. Application No. 295-24, reads:

"2. The height of the building is excessive on the 26th and 27th street fronts—section 8, building zone resolution."

and

WHEREAS, the proposed building is to be of fireproof construction, 21 stories (315 ft.) and 28 stories (400 ft.) in height, with a frontage of 184 ft. and a depth of 388 ft.; to be occupied as stores and offices, a portion of the street wall on the 26th and 27th street fronts not complying with the setback requirements of the building zone resolution; and

WHEREAS, the board decided that there would be hardship in preventing applicant from carrying out the design of the structure as proposed in harmony with architectural practice and in view of the fact that the proposed building sets back from the building line; and

WHEREAS, this application was granted by the board at its meeting, September 30, 1924, on certain conditions, and applicant requested a modification of the time limit imposed.

MINUTES

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted, on condition* that the requirements of the building zone resolution be complied with in all other respects; that all necessary permits for the prosecution of the work shall be obtained within nine (9) months from the date of this action and the erection of the building prosecuted to completion.

429-24-BZ.

APPELLANT—John De Hart, for John J. Daly and Max L. Fried, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the maintenance of a motor vehicle repair shop.

PREMISES AFFECTED—1012-1018 Avenue St. John, The Bronx.

APPEARANCES—None.

ACTION OF BOARD—Appeal accepted for filing, subject to public hearing in due course.

THE VOTE TO ACCEPT APPEAL—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Holland and Connell.. 5
Negative 0
Absent: Mr. Kennedy and Fire Chief Kenlon 2

AREA FIXED.

(515-24-BZ)

The chairman presented and read a communication from Edward P. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 823-829 Classon avenue, Brooklyn.

The following area was approved by the board:

Both sides of Classon avenue from a point 100 feet south of Lincoln place to a point 400 feet north of proposed garage; the north side of Lincoln place and also the south side of St. John's place from Classon avenue to a point 150 feet east of Classon avenue.

Adjourned, 2:15 p. m.

BOARD OF APPEALS

SPECIAL MEETING.

TUESDAY AFTERNOON, MAY 26, 1925.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Acting Fire Chief Martin.

APPEALS FROM ADMINISTRATIVE ORDERS.

447-24-A.

APPELLANT—Keiner Williams Stamping Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—8746 123rd street, Richmond Hill, Queens.

APPEARANCES—

For Appellant: Frederick Fullhardt.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Laid over to June 16, 1925, at 10 a. m., on request of appellant's representative.

85-24-A.

APPELLANT—Philip J. Sinnott, for Harry Schneider, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—6118 Rockaway Beach boulevard, Arverne, Borough of Queens.

APPEARANCES—

For Appellant: None.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Laid over to June 23, 1925, at 10 a. m., on written request.

88-24-A.

APPELLANT—Nathaniel Seaman, for Olivett Distributing Co., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—250 Hudson street, Manhattan.

APPEARANCES—

For Appellant: Joseph A. Courtney.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Laid over to June 9, 1925, at 2 p. m., on request.

89-24-A.

APPELLANT—Corona Chemical Co., Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—43-45 Wooster street, Manhattan.

APPEARANCES—

For Appellant: None.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Laid over to June 9, 1925, at 2 p. m.

331-24-A.

APPELLANT—Board of Education, City of New York, owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—508-534 West 212th street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Laid over to June 30, 1925, at 10 a. m., pending action by board of aldermen.

1510-24-A.

APPELLANT—W. T. McCarthy, for J. Goldstein, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—1038 Ocean avenue, Brooklyn.

APPEARANCES—

For Appellant: W. T. McCarthy.

ACTION OF BOARD—Laid over to June 16, 1925, at 10 a. m., on request of appellant.

1496-24-A.

APPELLANT—Cornell Utilities Co., Inc., for Brotherhood of Locomotive Engineers, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—205-207 West 33rd street, Manhattan.

For Appellant: William Porter.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

MINUTES

THE RESOLUTION:

(1496-24-A)

WHEREAS, Cornell Utilities Co., Inc., for Brotherhood of Locomotive Engineers, owner, filed, December 20, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 205-7 West 33rd street, Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered December 3, 1924, in acting on Alteration Application No. 2138-24, reads:

"2. The use of Grade B Fuel Oil is not permitted in commercial plants or in dwellings of more than two families unless the room in which equipment is used is cut off from the rest of building by fireproof partitions, ceilings and floors. Such rooms must also have direct entrance from street only, and be adequately vented to the outer air."

and

WHEREAS, the building is non-fireproof, three stories and basement in height, 30 ft. by 99 ft. in area. OCCUPIED: Basement, boiler room and above as a bank and office building; and

WHEREAS, a fuel oil burning system has been installed consisting of a 200-gallon fuel oil tank, a 55-gallon auxiliary tank, a Nokol burner and the necessary valves and piping; the ceiling of the basement over the tanks, pumps and piping is not fireproof; the boiler being in a fireproof compartment with a fire door at the opening thereto; and

WHEREAS, appellant contends that due to structural conditions it is impracticable to place a direct stairway from the street to basement, and requests that the fuel oil burning system, as installed, be accepted.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 2, on condition that the boiler room shall be enclosed in approved masonry walls and fire stopped with approved masonry; ceilings to be plastered on wire lath, with not less than $\frac{3}{4}$ in. cement mortar; that said boiler room shall be vented to outer air by means of a galvanized metal duct, with register or screen on the outlet side; that the cellar stairs shall be enclosed in fire-retarding material, with self-closing fireproof door at the lowest level; that a fixed iron engineer's ladder shall be provided and maintained at the front of building with egress directly to street; and that the fuel oil burning equipment shall comply with the fuel oil rules in all other respects.

BUILDING ZONE CASES.

237-25-BZ.

APPLICANT—William F. Doyle, for Bee Dee Realty Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—38-44 State street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: M. Harrison, Sara Stephenson, M. Butler.

ACTION OF BOARD—Laid over to June 9, 1925, at 2 p. m., on request of applicant.

811-24-BZ.

APPLICANT—John J. Dunnigan, for Hattie W. Ayer, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—495-499 East 171st street, The Bronx.

APPEARANCES—

For Applicant: None.

For Opposition: Jacob Feld.

ACTION OF BOARD—Laid over to June 9, 1925, at 2 p. m., on written request of applicant.

1091-24-BZ.

APPLICANT—John W. Clancy, for Valballe Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—341 East 184th street, The Bronx.

APPEARANCES—

For Applicant: Morris A. Sachs.

For Opposition: Stanley Garter and others.

ACTION OF BOARD—Laid over to June 16, 1925, at 10 a. m., on request of objector.

110-25-BZ.

APPLICANT—Edward P. Doyle, for Brecher Building Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—Southeast corner Washington avenue and Fifth avenue, Long Island City, Borough of Queens.

APPEARANCES—

For Applicant: Edward P. Doyle.

For Opposition: Mr. Cella.

ACTION OF BOARD—Laid over to June 16, 1925, at 10 a. m., pending inspection by committee of board.

1272-24-BZ.

APPLICANT—John J. Dunnigan, for Hugo C. Cook, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2311 St. Raymond's avenue, The Bronx.

APPEARANCES—None.

ACTION OF BOARD—Laid over to June 9, 1925, at 2 p. m., on written request of applicant.

245-25-BZ.

APPLICANT—Louis A. Sheinart, for William Cunningham, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1721-1723 Park avenue, Manhattan.

APPEARANCES—

For Applicant: Louis A. Sheinart, Arthur S. Thomas.

For Opposition: George J. Meyer.

ACTION OF BOARD—Application granted on condition

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland and Connell

Negative: Mr. Gunnison and Acting Fire Chief Martin

Absent

THE RESOLUTION:

(245-25-BZ)

WHEREAS, Louis A. Sheinart, for Wm. Cunningham, owner, filed, March 3, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1721-1723 Park avenue, Manhattan; and

MINUTES

WHEREAS, a public hearing was held on this application the board of appeals, at its special meeting, May 26, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and
WHEREAS, the use district maps accompanying the building zone resolution show that Park avenue and East 120th street are business districts; and
WHEREAS, the decision of the superintendent of buildings, rendered February 11, 1925, in acting on N. B. Application No. 82-25, reads:

"1. Location of proposed garage is contrary to the provisions of Section 4, Building Zone Resolution."

WHEREAS, the proposed building is to be of fireproof construction, four stories in height, with a frontage of 10 ft. 2 in. on Park avenue and 88 ft. on East 120th street, to be occupied as a garage for more than five motor vehicles; and

WHEREAS, the board deemed that the applicant supported his application under section 21, and that adjoining properties could be adversely affected.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be erected fireproof; that it shall be limited in height to a three (3) story structure above sidewalk grade; that there shall be no vehicular entrance on 120th street front and that any door opening on 120th street shall be restricted to an emergency exit, not exceeding 3 ft. 8 in. in width; the sills of any windows opening on the 120th street front shall be at least 5 ft. 6 in. above grade; the elevator opening on the Park avenue front to be equipped with automatic self-operating doors, operative only on electric contact; the rear and gable walls to be unpierced throughout their entire height and length; that the front elevation shall be finished with face brick with architectural terra cotta or stone trimmings, laid out in panel design with ornamental cornice; that there shall be no signs, other than one electric projecting sign, confined to the Park avenue front of the structure; any gasoline storage equipment shall be located inside the street wall of the corner formed by the intersection of Park avenue and 120th street; that a return of the street elevation shall be made to this board for approval before submission to the superintendent of buildings; *Resolved, further*, that all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

1583-21-BZ.

APPLICANT—Mrs. Hannah T. Manning.

SUBJECT—Application for reopening (re: order of fire commissioner) to permit in a residence district the maintenance of a garage.

PREMISES AFFECTED—7 Clinton place, The Bronx.

APPEARANCES—

For Applicant: Irene Manning.

For Opposition: None.

ACTION OF BOARD—Extension of time granted.

THE VOTE TO GRANT EXTENSION OF TIME—

Affirmative: Chairman Walsh, Messrs. Kennedy,

Dowd, Gunnison, Holland and Acting Fire

Chief Martin 6

Negative 0

Absent: Mr. Connell 1

THE RESOLUTION:

(1583-21-BZ)

WHEREAS, Hannah T. Manning, owner, filed, December 7, 1921, an application, under the building zone resolution, to permit in a residence district the maintenance of two garages, space in which is rented to persons not residing on premises; premises 7 Clinton place, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, May 23, 1922, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Clinton place and Davidson avenue are residence districts and Jerome avenue is a business district; and

WHEREAS, the order of the fire commissioner, dated December 6, 1921, reads:

"1. Maintenance of your garage is a violation of section 3 of article 2 of the Building Zone Resolution of the Board of Estimate and Apportionment of the City of New York, adopted July 25, 1916, inasmuch as garage is not an accessory to residence on lot and motor vehicles are for sale, for rent or for hire or are subject to charges for storage.

"You are, therefore, ordered to: "1. Discontinue the use of premises for the storage of motor vehicles containing volatile inflammable oil."

and

WHEREAS, the buildings are of metal construction, each one story in height, with a frontage of 30 ft. and 16 ft., respectively, and a depth of 18 ft.; occupied, one for storage of two cars and the other for storage of three cars, space being rented to persons not residing on premises; and

WHEREAS, there would be undue hardship in requiring the owner to immediately discontinue the renting of space in these buildings; and

WHEREAS, this application was granted by the board at its meetings, March 23, 1922, and July 17, 1923, for a temporary period and applicant requested an extension of time.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, for a temporary period of two years from July 17, 1925, *on condition* that the garage use shall be limited to automobiles of the pleasure car type, and *on further condition* that no gasoline shall be stored on the premises, and that no motor vehicle repairing shall be done on the premises.

Adjourned 4.45 p. m.

WILLIAM J. O'GORMAN, Secretary.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 9, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, June 26, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

ures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] *two hundred (200)* feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof. May be used in lieu of heads located in peak of roof.

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the interway. Fittings shall be standard cast iron fittings, and all be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (50) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the up flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;
- On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flow tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads4
- (b) For Conran* one (1) inch heads1
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads1

Where equipped with an approved quick-opening device, the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads8
- (b) For Conran* one (1) inch heads2
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads1

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads5
- (b) For Conran* one (1) inch heads1
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads1

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level of the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internal heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, once before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Minutes of Special Meeting, Board of Standards and Appeals, May 29, 1925.
Minutes of Meeting, Board of Appeals, June 2, 1925.
Minutes of Meeting, Board of Standards and Appeals, June 2, 1925.
Reserve Calendar.
Amendment to Building Zone Resolution.
Notice of Public Hearing.
Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, June 9, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, June 16, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, *Chairman*.

CALL OF CLERK'S CALENDAR.

Tuesday, June 9, 1925, at 2 p. m.

Building Zone Cases.

1425-24-BZ.	APPLICANT—William F. Doyle, for Charles Milgrim, lessee. PREMISES—231 West 74th street, Manhattan. TO PERMIT in a residence district the maintenance of a factory use of an existing building.
1437-24-BZ.	APPLICANT—Charles Moscarelli, owner. PREMISES—1265-1271 60th street, Brooklyn. TO PERMIT in a business district the erection and main- tenance of a garage for the storage of more than five (5) motor vehicles.
327-25-BZ.	APPLICANT—Richard Shutkind, for Richard Schmidt, owner. PREMISES—162-166 Prospect street, Long Island City, Queens. TO PERMIT in a business district the erection and main- tenance of an extension to a dry cleaning estab- lishment.
354-25-BZ.	APPLICANT—A. M. Davis, attorney for Herbert M. Metzger and Amy M. Lindau, owners. PREMISES—55 East 60th street, Manhattan. TO PERMIT in a residence district the alteration and ex- tension of an existing dwelling to be used for busi- ness purposes.
376-25-BZ.	APPLICANT—Charles H. Richter, for Jane A. Moorhead and Helen G. Moorhead, owners. PREMISES—310 Second avenue, Manhattan. TO PERMIT in a residence district the erection and main- tenance of an extension, to an existing building, to be used for store purposes.
398-25-BZ.	APPLICANT—Louis Allen Abramson, for DeKalb Realty Corp., owner. PREMISES—3655-3663 Third avenue, The Bronx. TO PERMIT in an unrestricted district and on a portion of a street between two intersecting streets, in which portion there exists an exit from or an en- trance to a public school, the erection and main- tenance of a garage for the storage of more than five (5) motor vehicles.
1191-23-BZ.	APPLICANT—Nathan Langer, for Commonwealth Savings Bank, owner. PREMISES—425-431 West 209th street, Manhattan. TO PERMIT in a residence district the omission of a rear yard required under the zoning resolution (previ- ously granted as to use district variation—erection of a garage).

CALENDAR

BOARD OF APPEALS.

Tuesday, June 9, 1925, at 10 a. m.

Appeals from Administrative Orders.

- 75-24-A—628-642 West 45th street, Manhattan.
- 59-24-A—126 Franklin street and 220-224 West Broadway, Manhattan.
- 66-24-A—1342 Park avenue, Manhattan.
- 32-25-A—20 Beekman street, Manhattan.
- 66-25-A—637-649 West 125th street, Manhattan.
- 94-25-A—96 Spring street, Manhattan.
- 70-25-A—509 Avenue S, Brooklyn.
- 35-25-A—217-219 West 126th street, Manhattan.
- 70-25-A—South side of Roosevelt avenue, from 21st to 22nd streets, Elmhurst, Queens.
- 31-25-A—218th street, 220th street and Harlem River, Manhattan.
- 39-25-A—West side of Kemble avenue, 1,352 ft. 3½ in. south of Mill avenue, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, June 9, 1925, at 10 o'clock, Room 1013, Municipal Building, on the following matters:*

- AL. NO. 379-25-BZ—Application, April 27, 1925, under the building zone resolution, of Walter Scheminger, applicant and owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles and also a motor vehicle repair shop; premises 350-354 Broadway, southwest corner of Cary avenue, West New Brighton, Staten Island, Richmond.
- AL. NO. 60-25-BZ—Application, January 15, 1925, under the building zone resolution, of Edward Hoffmann, applicant, on behalf of Benenson Realty Co., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 2115-2137 Webster avenue, The Bronx.
- AL. NO. 335-25-BZ—Application, March 27, 1925, under the building zone resolution, of Alfred J. Boulton, applicant, on behalf of The Stuyvesant Real Estate Co., Inc., owner, to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 89-99 Granite street, Brooklyn.
- AL. NO. 338-25-BZ—Application, March 28, 1925, under the building zone resolution, of Euell & Euell, architects, on behalf of Bernardo Affinito, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1295 Cromwell avenue, northwest corner of West 169th street, The Bronx.
- AL. NO. 344-25-BZ—Application, March 30, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Central

Zone Corp., owner, to permit in a business, and also two (2) times height district, the erection of the street walls of a building to a height exceeding the limit set by the zone resolution; premises 15-19 East 33rd street and 18-22 East 34th street, Manhattan.

WILLIAM E. WALSH, *Chairman.*

BOARD OF APPEALS.

SPECIAL MEETING.

Tuesday, June 9, 1925, at 2 p. m.

Appeal from Administrative Order.

- 588-23-A—East side Church street, 200 ft. north of Railroad avenue, Tottenville, S. I., Richmond.
- 588-24-A—250 Hudson street, Manhattan.
- 589-24-A—43-45 Wooster street, Manhattan.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday afternoon, June 9, 1925, at 2 o'clock, in Room 1013, Municipal Building, on the following matters:*

- CAL. NO. 191-25-BZ—Application, February 17, 1925, under the building zone resolution, of James W. Byrnes, applicant, on behalf of Bernard Kiritz, owner, to permit in a residence and "C" area district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles, also the omission of a rear yard required by the building zone resolution; premises 1209-1211 Putnam avenue, Brooklyn.
- CAL. NO. 1057-24-BZ—Application, August 20, 1924, under the building zone resolution, of James J. Walker, applicant, on behalf of William A. Cameron, owner, to permit partly in a residence district and partly in a business district the erection of a garage for the storage of more than five (5) motor vehicles, and also within a "B" area district, the omission of the rear yard required by the zone resolution; premises northwest corner 182nd street and Folin street, The Bronx.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Connell, Holland and Fire Chief Kenlon... 5

Negative

Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

(328-25-A)

WHEREAS, German Kahn, owner, filed, March 26, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 775-87 and 789-97 Humboldt street and 24-32 and 34-42 Moultrie street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated Dec. 16, 1924, reads:

"1. Install a standpipe system with risers 4 inches in diameter (covering both sections) tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation fire department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto."

and

WHEREAS, the building is non-fireproof, one story (19 ft.) in height, having a frontage of 249 ft. on Moultrie street and a frontage of 218 ft. on Humboldt street (a total of approximately 24,000 sq. ft), divided into two approximately equal sections by a 12-inch brick fire wall with two openings therein protected with fireproof self-closing sliding doors (equipped with fusible links) on both sides of dividing wall; OCCUPIED as a smelting works; and

WHEREAS, appellant contends that the building is low in height, faces on two streets and that the nature of the work done on the premises—handling and smelting of metal—is not hazardous;

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the required number of fire buckets shall be maintained on premises; and granted so long as conditions as to occupancy and use, also layout of structure as now sub-divided, remain substantially unchanged.

1426-24-A.

APPELLANT—William F. Doyle, for H. Milgrim & Sons, Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—2121-2129 Broadway and 227-229 West 74th street, Manhattan.

APPEARANCES—

For Appellant: William F. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Connell, Holland and Fire Chief Kenlon

Negative

Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

(1426-25-A)

WHEREAS, William F. Doyle, for Mrs. Theresa D. Browning, owner, filed, December 3, 1924, an appeal, with the board of appeals, from an order of the fire commissioner,

MINUTES

affecting premises 2121-2129 Broadway and 227-229 West 74th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 7, 1924, reads:

"Order No. 63036-F:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check-valves and 2½ inch regulation fire department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the building is non-fireproof, 4 stories (50 ft.) in height, having a frontage of 91 ft. on Broadway and a frontage of 143 ft. on West 74th street; an approximate area of 10,575 sq. ft., OCCUPIED 1st story, restaurant, 2nd and 3rd stories factory, dressmaking and millinery; 4th story, billiard club—approximately 166 persons above the 1st story; and

WHEREAS, appellant contends that the building is low in height, faces on two streets, is equipped with an interior fire alarm system, with a direct communication to fire headquarters, and in view of the fact that the premises will be demolished in two years, requests that the order be held in abeyance until that time.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that not less than eight (8) approved 2½-gallon fire extinguishers shall be provided and maintained in each story; that all legal exits required shall be maintained; that the occupancy and use shall remain unchanged; and granted only for a period of two years from the date of this action.

329-25-A.

APPELLANT—Meyer Moskowitz, for Shelby Construction Co., Inc., owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—448-454 12th street, Brooklyn.

APPEARANCES—

For Appellant: Meyer Moskowitz and Montague Moskowitz.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT:

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy,

Connell and Holland and Fire Chief Kenlon 5

Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

(329-25-A)

WHEREAS, Meyer Moskowitz, for Shelby Construction Co., Inc., owner, filed, March 26, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 448-454 12th street, Brooklyn; and

WHEREAS, the decision of the fire commissioner rendered December 2, 1924, reads:

"1. Resolution of Cal. No. 179-20-S, waiving fireproof construction as in this instance requires that standpipe be attached to interior walls or columns which carry roof girders.

"2. Siamese can not be omitted unless street pressure at main exceeds 45 lbs. Evidence must be obtained from the department of water, gas and electricity in form of a letter, which must be filed.";

and

WHEREAS, the building, located in an unrestricted district, is non-fireproof, one story in height, 100 ft. by 100 ft. in area, OCCUPIED as a public garage for the storage of more than five motor vehicles; equipped with a 2½-inch line, buried underground and connected with the street main, having two 2½-inch risers with 50 ft. of hose at each riser; and

WHEREAS, appellant filed a letter from the department of water supply, gas and electricity stating that the street main in question is fed both ways and has a minimum pressure of 40 lbs. per square inch at curb elevation, and appellant requests that the existing standpipe installation be accepted.

Resolved, that the decision of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

253-25-A.

APPELLANT—Samuel Rosenblum, for Tivoli Construction Corp., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—839 Eighth avenue and 301-307 West 50th street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum and L. S. Bolognino.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Connell, Holland and Fire Chief Kenlon

Negative

Absent: Messrs. Dowd and Gunnison.....

THE RESOLUTION:

(253-25-A)

WHEREAS, Samuel Rosenblum, for Tivoli Construction Corp., lessee, filed, March 5, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 839 Eighth avenue and 301-307 West 50th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 15, 1924, reads:

"Install complete standpipe system in accordance with the requirements of Article 25, Chapter 5, Code of Ordinances, and the regulations of the board of standards and appeals.";

and

WHEREAS, the premises consist of a plot of ground having a frontage of 140 ft. 4 in. on West 50th street and a frontage of 133 ft. 5 in. on Eighth avenue, upon which plot is located a moving picture theatre and five other buildings occupied as stores and dwellings, the lobby of the theatre extending to Eighth avenue; the moving picture theatre is fireproof, two stories in height, 90 ft. 4 in. by 100 ft. 6 in. (irregular) in area, having a total seating capacity of 1,540 persons; 970 being provided for on the 1st story and 570 persons in the balcony; the roof, in the summer time, being occupied as a roof garden; EQUIPPED with a 4-in. line (connected to street main with a 2-in. connection) having three 4-in. risers, two outlets in auditorium, one in balcony, one in roof garden and one in the lobby; and

WHEREAS, appellant contends that the building is used exclusively for moving pictures, with no stage of any kind; exits on two street fronts; that the 6-in. city main in the street is fed both ways and has a minimum pressure of 44 pounds per square inch (submitting a letter from the department of water supply, gas and electricity to this effect), and appellant proposes to remove the present 2-in. connection to the city main and to provide in its stead a 4-in. connection; appellant contends, further, that the stores (under the same ownership as the theatre) are separated from the theatre by an open court, and that the lobby is separated from the other building by a fireproof wall.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and is hereby is granted only so far as it affects the installation of suction tank and fire pump, on condition that the standpipe equipment shall be supplied with a 4-in. connection to city main, fed both ways; and that a 3,500-gallon gravity tank shall be installed not less than 20 ft. above the roof.

APPELLANT—Cornell Utilities Co., Inc., for Straus & Adler Co., owner.

SUBJECT—Appeal from decision of fire commissioner.
REMISES AFFECTED—607-611 West 40th street, Manhattan.

APPEARANCES—
For Appellant: William Porter.
For administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Connell, Holland and Fire Chief Kenlon 5
Negative 0
Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

(272-25-A)

WHEREAS, Cornell Utilities Co., Inc., for Straus & Adler Co., owner, filed, March 10, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 607-611 West 40th street, Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered March 2, 1925, reads:

"2. The use of grade B fuel oil is not permitted in commercial plants and residences of more than two families unless the room in which equipment is used is cut off from the rest of the building by fireproof partitions, ceilings and floors. Such rooms must also have direct entrance from street only and be adequately vented to the outer air."

and
WHEREAS, the building is non-fireproof, 2 stories in height, 75 ft. by 94 ft. in area; OCCUPIED as a slaughter house, 35 persons in entire premises; and

WHEREAS, a fuel oil burning system has been installed, consisting of a 1,065 gallon fuel oil storage tank, buried outside the building; a 60-gallon auxiliary tank and NoKot burners, with the necessary valves and piping to make a complete installation; the walls of the room in which the oil burning equipment is installed are pierced by two openings; one in the front, leading to an engineer's ladder to the street, and also one in the rear leading to the rest of the basement, there being another door leading to a refrigerating plant in same room; and

WHEREAS, appellant contends that the boiler room is separated from the rest of the premises by fireproof partitions, ceilings and floors and that the openings in the walls are protected by double self-closing fireproof doors and that, due to the operation of the slaughter house, it is not convenient to separate the refrigerating room from the boiler room.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal as to Item 2 be and it hereby is *granted on condition* that the ceiling of the boiler room enclosure shall be finished with gypsum blocks on steel supports, plastered with cement mortar; that there shall not be less than two horizontal exits from the boiler room, and an engineer's iron ladder from cellar to street, and that the fuel oil burning equipment shall be installed and maintained in accordance with the fuel oil rules in all other respects.

351-25-A.
APPELLANT—August W. Wehrman, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—2609 Davidson avenue, The Bronx.

APPEARANCES—
For Appellant: Monroe J. Zimmerman.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Connell, Holland and Fire Chief Kenlon 5
Negative 0
Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

(351-25-A)

WHEREAS, August W. Wehrman, owner, filed, April 1, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2609 Davidson avenue, The Bronx; and

WHEREAS, the order of the fire commissioner, dated March 19, 1925, reads:

"Order No. 28650-LC:

"1. Provide a hydrostatic test of not less than one hundred pounds per square inch, for all grade B fuel oil carrying piping, as per Rule 25, Sec. 2 of the fuel oil rules.

"2. Provide a remote control for shutting off the supply of oil to the burner in case of an abnormal discharge, as per Rule 26-c of the fuel oil rules.

"3. Provide fuel oil burner or burners of a type approved by the board of standards and appeals, as per Rule 12 of the fuel oil rules."

and

WHEREAS, the building is non-fireproof, 2 stories and basement in height, 23 ft. by 52 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 500-gallon storage tank buried outside the premises, a 60-gallon auxiliary tank, a Powerlight oil heat burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the piping test has been made by a representative of the fire department and that the installation is provided with a remote control for shutting off the supply of oil to the burner.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal as to Item 1 be and it hereby is *granted on condition* that standard wrought-iron piping shall be used throughout the fuel oil burning equipment and that all joints shall be maintained tight; as to Item 2, *granted on condition* that the supply from storage tank shall be controlled with a shut-off valve on the outside of building; as to Item 3, the appeal be and it hereby is *denied*.

THE RESOLUTION:

WHEREAS, Samuel Rosenblum, for 206 Broadway Company, owner, filed, March 31, 1925, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 204-210 Broadway and 146-158 Fulton street, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated February 25, 1924, read;

MINUTES

"Order No. 55075-F:

"1. Replace the missing shutters with proper iron or kalameined shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at south and east sides of the ten-story building and at east side of five-story building, or other approved protection, as per Sec. 375, Article 18, Chapter 5, of the code of ordinances."

"Order No. 55077-F:

"1. Provide a tank on roof of at least 3,500 gallons capacity for the standpipe system, said tank to be so elevated that the bottom will be not less than 20 feet above the roof level. Section 20, Chapter 12, code of ordinances.";

and

WHEREAS, the building is non-fireproof, 10 stories in height, 62 ft. 8 in. by 161 ft. 6 in. at the 1st to 5th stories inclusive, and 62 ft. 8 in. by 102 ft. 4 in. in area above; separated into two sections by a partition wall with openings therein on the 2nd, 3rd, 4th and 5th stories; OCCUPIED, 1st story, stores; upper stories, offices; 346 persons above the 1st story; and

WHEREAS, there are 8 openings on the 5th story in the easterly wall of the 5-story section, within 50 feet of the roof of the adjacent building and also within 30 ft. of openings in a neighboring building to the east, seven (7) openings on each story above the 5th story in the easterly wall of the 10-story section within 50 ft. of the roof of the 5-story section of premises in question, and seventeen (17) windows in the southerly wall of the 10-story section on the 7th to 10th stories inclusive, within 50 ft. of the roof of a 6-story structure to the south; and

WHEREAS, appellant contends that in regard to the openings in easterly wall of the 5-story section, that the windows forming the exposure are all shuttered and that the windows are in offices; in regard to openings in the easterly wall of the 10-story section, contends that the exposure is the roof of part of the premises in question; in regard to openings in the southerly wall of the 10-story section, contends that the windows along the stairway and elevator shafts (located on this side of the premises in question) are protected by shutters; contends that all of the buildings in question are office buildings, and in regard to the standpipe tank, proposes to arrange the existing 2,800-gallon tank in such a manner as to leave a 2,000-gallon reserve for the standpipe lines.

Resolved, that the orders of the fire commissioner be and they hereby are *affirmed*, and the appeal be and it hereby is *denied*.

BUILDING ZONE CASES.

732-24-BZ.

APPLICANT—William F. Doyle, for Abgo Construction Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—162-172 McDougall street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Hon. John Wirth and Charles H. Ernst.

ACTION OF BOARD—Laid over to June 23, 1925, at 10 a. m., on request of applicant.

1046-24-BZ.

APPLICANT—Thos. F. Martin, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—North side of Second street 170 feet 9 inches east of Fourth avenue, Brooklyn.

APPEARANCES—

For Applicant: David J. Stewart.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Holland, Connell and Fire Chief Kenlon

Negative

Absent: Messrs. Dowd and Gunnison.....

THE RESOLUTION:

(1046-24-BZ)

WHEREAS, Thomas F. Martin, owner, filed, December 9, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises north side of Second street, 170 ft. 9 in. east of Fourth avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting June 2, 1925, after due notice by publication in the Bulletin of the board of standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fourth avenue, east side, is a business district; Fourth avenue, west side, is an unrestricted district and Second street is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 17, 1924, in acting on App. No. 14940-24, reads:

"Public garage in a business district contrary to Art. II, Par. No. 4 of the zone resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, one story in height, with a frontage of 200 ft. and a depth of 100 ft., to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, applicant established his basis of appeal under Section 7-g by filing 82 per cent of consents by affected property owners, and the board deemed that the application should be granted under such conditions as would safeguard affected property.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be limited in height to a one-story building, erected fireproof; that the rear and gable walls shall be unpierced throughout their entire height and length; that the garage area be subdivided, substantially in half, by a wall of approved masonry, any openings therein to be equipped with approved fireproof doors; that any skylights installed shall be glazed with plain glass equipped with wire guards above and below; that the front elevation shall be finished in face brick, panel design, with architectural terra cotta or stone trimmings; that there shall be no roof sign maintained and no advertising on the premises, other than one projecting electric sign, indicating the title of the garage; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1466-24-BZ.

APPLICANT—James McKillop, for Charles Cohen, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—192-194 Huron street, Brooklyn.

APPEARANCES—

For Applicant: James McKillop.

For Opposition: Rose McNamara and others.

ACTION OF BOARD—Application denied.

Negative: Chairman Walsh, Messrs. Kennedy,
Holland, Connell and Fire Chief Kenlon... 5
Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

WHEREAS, James McKillop, for Charles Cohen, owner, filed, December 16, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 192-194 Huron street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting June 2, 1925, after due notice by publication in the Bulletin of the board of standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Huron street is a business district and India street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 24, 1924, in acting on Application No. 22791-24, reads:

"1. Garage for more than 5 motor vehicles prohibited in business district. Zone Resolution, Art. II, Sec. 4 (15). Above application is therefore denied.";

and
WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 50 feet and a depth of 100 feet, to be occupied as a garage for more than five (5) motor vehicles; and

WHEREAS, applicant failed, in the opinion of the board, to establish his basis of appeal under section 21, hardship, and twenty-one affected property owners appeared and protested vigorously against the hardship on them of granting the application.

Resolved, that the decision of the superintendent of buildings be and the same hereby is *affirmed*, and the application be and the same hereby is *denied*.

89-25-BZ.

APPLICANT—Robert T. Lyons, for Bing & Bing, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—110 West 51st street and 109 West 50th street, Manhattan.

APPEARANCES—

For Applicant: Robert T. Lyons.
For Opposition: M. Gollubier, Andrew R. McLaren, Dr. Baruch, Eugene J. Finnegan, A. Cella and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0
Negative: Chairman Walsh, Messrs. Kennedy,
Holland, Connell and Fire Chief Kenlon... 5
Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

(89-25-BZ)

WHEREAS, Robert T. Lyons, for Bing & Bing, Inc., owner, filed, January 22, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 110 West 51st street and 109 West 50th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting June 2, 1925, after due notice by publication in the Bulletin of the board of standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 50th street, West 51st street and Sixth avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings,

rendered January 8, 1925, in acting on N. B. App. No. 714-24, reads:

"1. Proposed garage is unlawful in a business district. Article No. 11, building zone resolution.";

and
WHEREAS, the proposed building is to be of fireproof construction, seven stories in height, with a frontage of 245 feet and a depth of 200 feet 10 inches, to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, there was vigorous objection on the part of affected property owners to the granting of this application on the ground that it would retard the progress of the whole section, and the board deemed that further invasion of the street was unwarranted in light of surrounding conditions and existing circumstances.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed* and the application be and it hereby is *denied*.

202-25-BZ.

APPLICANT—Philip J. Sinnott, for Joseph A. Greenbaum, Rachel Zoel and Morris A. Drucker, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a building to be used for store purposes.

PREMISES AFFECTED—2715-2717 Briggs avenue, The Bronx.

APPEARANCES—

For Applicant: Philip J. Sinnott.
For Opposition: Owen S. N. Tierney, Abraham Spies and Milton Mansback.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0
Negative: Chairman Walsh, Messrs. Kennedy,
Holland, Connell and Fire Chief Kenlon... 5
Absent: Messrs. Dowd and Gunnison..... 2

THE RESOLUTION:

WHEREAS, Philip J. Sinnott, for J. Greenbaum, Rachel Zoel and Morris A. Drucker, owners, filed, February 18, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a building to be used for store purposes; premises 2515-2517 Briggs avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 2, 1925, after due notice by publication in the Bulletin of the board of Standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Briggs avenue and East 196th street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 30, 1925, in acting on N. B. Application No. 173-25, reads:

"1. Erection of proposed building for business use in residence district is contrary to provisions of building zone resolution.";

and
WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 69.91 feet and a depth of 93.85 feet, and to be occupied as stores; and

WHEREAS, the board deemed that applicant did not establish his basis of appeal under section 21, namely, hardship, and there was vigorous opposition on the part of affected property owners to further business invasion in this street, there being but two small one-story existing stores on either street front affected.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed* and the application be and it hereby is *denied*.

Adjourned, 1 p. m.

THE RESOLUTION:

(264-25-S)

WHEREAS, Croker National Fire Prevention Engineering Company, for Joseph Salat, owner, filed, March 9, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 398 First avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 16, 1925, reads:

"Order No. 70887-LD:

"2. Remove the substandard fire escape on the rear of the building or reconstruct same as per Section 274 of the Labor Law and Rule 3A, as amended by the Board of Standards and Appeals.

"Among the defects noted on this fire escape are the following:

"No 60 degree stairways connecting balconies. No stairway from top balcony to roof. Must be maintained structurally safe and properly painted. No sign of any character shall be placed at openings leading to same.

MINUTES

"3. Enclose the interior stairway at north side of building serving as a required means of exit, and the landings, platforms and passageways connected therewith on all sides with partitions of fire resisting material extending continuously from the 1st story to and including bulkhead on the roof, constructed as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories and basement in height, 24 ft. 8 in. by 81 ft. 6 in. in area at the 1st story and 24 ft. 8 in. by 73 ft. 6 in. in area above; OCCUPIED as a tenant factory, 11 persons above the 1st story; the 5th story being vacant at present; EQUIPPED with an interior fire alarm signal system; an interior wooden stairway, extending from the 1st story to the roof, enclosed in wooden partitions, metal covered on both sides, with metal covered wooden doors at openings; a fire escape on the front of the building, extending from the roof to the 1st story balcony, with drop ladder to street; a fire escape on the rear of the building, extending from the top story balcony to 2nd story balcony; windows along course of the fire escapes are fireproof; ROOFS of adjoining buildings to south 12 ft. lower, to north 6 ft. 3 in. lower; and

WHEREAS, petitioner proposes to provide a 60 degree connecting stair on the rear fire escape and also a drop ladder, at the 2nd story balcony, to the adjoining yard at the north, and further proposes to bring up to standard the fire escape on the front of the building, and requests, in view of limiting the occupancy of the premises to 25 persons above the 2nd story, the acceptance of the present stairway enclosure.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 2, on condition that the fire escape shall be maintained structurally safe, with a gooseneck ladder from the top story to the roof, and counterbalanced drop ladder in guides to yard of adjoining premises, with egress therefrom to street, connecting stairs to be not less than 70 degrees; the windows along the course to be made fireproof; and that the fire escape on the street front of the building be made to conform to the labor law; granted, as to Item No. 3, on condition that the existing double sheath wood enclosure around stairs shall be covered with metal on both sides, with self-closing tin-clad doors to all openings; and that the occupancy of the building shall not exceed twenty-five (25) persons above the 2nd story.

315-25-S.

PETITIONER—John J. Gilmartin, for National Licorice Company, owner.

SUBJECT—Variation of labor law as cited in orders of fire Commissioner.

PREMISES AFFECTED—106-116 John street and 227-237 Plymouth street, Brooklyn.

APPEARANCES—

For Petitioner: John J. Gilmartin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

THE RESOLUTION:

(315-25-S)

WHEREAS, John J. Gilmartin, for National Licorice Co., owner, filed, March 26, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 106-116 John street, 227-237 Plymouth street, Brooklyn; and

WHEREAS, the orders of the fire commissioner, dated December 18, 1924, read:

"Order No. 70245-LD:

"1. Remove the substandard fire escape on the John Street side and Plymouth Street side of building or reconstruct same as per Section 274 of the Labor Law and Rule 3-A as amended by the Board of Standards and Appeals May 9, 1924.

"NOTE: Among the defects noted on these fire escapes are the following: Windows on course not fireproof nor self-closing. No 60 degree stairways connecting balconies. No stairway at least 22 in. in width from lowest balcony to ground or drop ladder in guides. Must be maintained structurally safe and properly painted. No sign of any character shall be placed at openings leading to same."

"Order No. 70246-LD:

"1. Provide approved self-closing fire doors at openings leading to the stairway at center of building at north side and to the stairway at the southwest corner of building on all stories, opening outwardly so as not to obstruct the stairway, as per Section 271 of the Labor Law and Rule 507 of the Industrial Code.

"2. Arrange bars and gratings on windows on the north, east, south and west side of basement and 1st story so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for the purposes of egress, as per Section 272 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories in height, having a frontage of 123 ft. on John street and a frontage of 82 ft. on Plymouth street and a depth of 200 ft.; OCCUPIED for the manufacture of and packing licorice, 155 persons above the 1st story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Three interior fireproof stairways, one extending from the 1st story to the top story and two extending from the 1st story to the roof, all stairways enclosed in fireproof partitions with fireproof automatic sliding doors and also wooden doors opening inwardly at openings; three fire escapes with non-fireproof windows along the course thereof; two on the John street front and one on the Plymouth street front, extending from the top story to the 2nd story balcony with drop ladders to street; there are twenty-five windows with iron bars at same in the basement and 1st story of the building; and

WHEREAS, petitioner contends that the existing means of exit are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted, as to Order No. 70245-LD, Item No. 1, on condition that the fire escapes on the street front of the building shall be made structurally safe, and to be provided with drop ladder in guides, and that the required legal interior exits shall be maintained; granted, as to Order No. 70246, Item No. 1, on condition that the doors shall be equipped with fusible links, and granted, as to Item No. 2, on condition that the window guards shall be restricted to wire and made movable; granted only so long as conditions as to use and occupancy remain unchanged.

309-25-S.

PETITIONER—John J. Gilmartin, for Alexander List, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—639-641 West 51st street, Manhattan.

APPEARANCES—

For Petitioner: John J. Gilmartin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

MINUTES

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott 8
Negative 0
Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

THE RESOLUTION:

(309-25-S)

WHEREAS, John J. Gilmartin, for Alexander List, owner, filed, March 20, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 639-641 West 51st street, Manhattan; and February 26, 1925, reads: :

"1. Enclose the interior stairway at the east side of building serving as a required means of exit with partitions of fire resisting material extending continuously from the lowest point of the stairway to the ceiling of the 1st floor. Such enclosure shall lead directly to a door opening outwardly to a street or road. All openings in the enclosure shall be provided with fire doors equipped with self-closing devices, as per Rule 4 of the Board of Standards and Appeals adopted July 29, 1924.

"2. Provide an outside iron balcony fire escape on the rear of the building conforming with Sec. 273 of the Labor Law. * * *";

and

WHEREAS, the building is non-fireproof, two stories in height, 60 ft. by 95 ft. in area; OCCUPIED for the manufacture of printer's ink, 20 persons in the entire building. EXITS: An interior wooden stairway extending from 1st story to 2nd story; enclosed in wooden partitions with wooden doors at openings and a double rung iron ladder to scuttle in roof; ROOFS of adjoining buildings approximately 20 ft. higher; and

WHEREAS, petitioner requests the acceptance of the existing means of exit for a period of two months, at which time the building will be reconstructed.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the stair shall be covered on the loft side of 1st story with plaster boards and metal, all doors to openings therein to be metal covered; and *granted on the further condition* that legal means of exit conforming to the requirements of the labor law shall be provided within two (2) months.

243-25-S.

PETITIONER—Horace Ginsberg, for Select Printing Co., Inc., lessee.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—80 Lafayette street, Manhattan.

APPEARANCES—

For Petitioner: Horace Ginsberg.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott 8
Negative 0
Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

THE RESOLUTION:

(243-25-S)

WHEREAS, Horace Ginsberg, for Hallenbeck, Hungerford Realty Corp., owner, filed, March 2, 1925, a petition, with the board of standards and appeals, for variation from the

requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 80 Lafayette street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered February 25, 1925, in acting on Alt. Application No. 57-25, reads:

"3. Wood partitions not permitted in fireproof factory building."; and

WHEREAS, the building is fireproof, 16 stories in height, 106 ft. by 200 ft. (irregular) in area. OCCUPIED: 1st story, stores; upper stories, offices and 25 per cent manufacturing, 100 persons per story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Four interior stairways, extending from the 1st story to the roof, enclosed in 6 in. terra cotta block partitions with fireproof doors at openings; a fire escape on the rear of the building, extending from the roof to street; and

WHEREAS, on a portion of the 15th story of the building, it is proposed to construct, within 4 in. terra cotta block partition walls, wood and glass office partitions, consisting of oak panelling 7 ft. 6 in. high, with glazed transoms over to ceiling; and

WHEREAS, petitioner contends that the proposed partitions will not interfere with the proper functioning of the sprinkler system and that the partitions will remain in place only for the duration of the lease. (Note—Period of time of duration of lease not stated.)

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the occupants of the executive offices on the 15th story, *on condition* that the office group shall be enclosed in approved fireproof partition, all openings to be equipped with self-closing fireproof doors.

1481-24-S.

PETITIONER—Emil Guterman, for Thomas O'Keeffe, owner.

SUBJECT—Variation of labor law as cited in order of commissioner.

PREMISES AFFECTED—120 South 8th street (rear), Brooklyn.

APPEARANCES—

For Petitioner: Emil Guterman.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott 8
Negative 0
Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

THE RESOLUTION:

(1481-24-S)

WHEREAS, Emil Guterman, for Thomas O'Keeffe, owner, filed, December 16, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 120 South 8th street (rear), Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 2, 1924, reads: :

"Order No. 69090-LD:

"1. Arrange the fire escape on the front of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law * * *.

"NOTE: Among the defects noted are the following:

MINUTES

"Doors and windows on course not fireproof, self-closing. No stairway from lowest balcony to ground.

"2. Extend the interior stairway at the east side of building to the roof, as per Section 271 of the Labor Law.";

and

WHEREAS, the building located at the rear of the lot is non-fireproof, three stories in height, 30.6 ft. by 45 ft. in area; OCCUPIED as an adjunct to a dry-cleaning establishment, 5 persons above the 1st story. EXITS: An interior wooden stairway, extending from the 1st story to the top story, enclosed in wooden partitions, with wooden doors at the openings; a fire escape with wooden doors, glazed with glass, along the course thereof on the front of the building, extending from the roof to 2nd story balcony, with 30 degree stair to yard, with egress from the termination of fire escape by means of alley to street; ROOFS of adjoining buildings are 15 ft. lower; and

WHEREAS, petitioner contends that the fire escape has previously been accepted by the fire department and proposes to make self-closing the wooden doors leading thereto and proposes to provide an iron ladder to scuttle in roof.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that the present doors to balconies shall be made metal covered and self-closing, and that the 2nd story balcony shall be extended to the east end of the property line, connecting with fireproof roof on the one-story adjoining extension, with egress therefrom by means of 60 degree stairs to open alley leading directly to the street; granted, as to Item No. 2, on condition that fixed double rung iron ladder shall be provided from the top story to scuttle in roof; and granted only so long as conditions as to occupancy and use remain substantially unchanged.

332-25-S.

PETITIONER—Ben J. Lubschez, for Reeland Publishing Co., Inc., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—326 West 48th street, Manhattan.

APPEARANCES—

For Petitioner: Ben J. Lubschez.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

THE RESOLUTION:

(332-25-S)

WHEREAS, Ben J. Lubschez, for Reeland Publishing Co., Inc., owner, filed, March 26, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 326 West 48th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 24, 1924, reads:

"Order No. 66702-LD:

"1. Arrange the fire escape on the front of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law.

"NOTE: Among the defects noted on this fire escape are the following: No balcony at 2nd story. No counterbalanced stairs to street. Windows opening on course

not fireproof nor self-closing. No stairway from 2nd story to balcony on 3rd story.";

and

WHEREAS, the building is non-fireproof, four stories height, 25 ft. by 97 ft. in area at the 1st and 2nd stories and 25 ft. by 42 ft. in area above. OCCUPIED: 1st story linotyping, shipping, etc., 9 persons; 2nd story, printing, 15 persons; upper stories, storage; no occupancy. EXITS: An interior wooden stairway extending from the 1st story to the top story, enclosed in Portland cement plaster on metal lath partitions with wooden doors at openings and also an accommodating stairway from the 1st to the 2nd story; a fire escape balcony at the 3rd and 4th stories, connected by an iron stair and a gooseneck ladder to roof. ROOFS of adjoining buildings are two and three stories higher; and

WHEREAS, petitioner proposes to provide a door at the 2nd story rear, affording egress to a proposed iron balcony and 60 degree iron stair leading to yard, with egress to the adjoining yards of the houses to the south, and requests further, in view of the existing limited occupancy, the acceptance of the exits as proposed.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that a fire escape shall be provided on front of building to roof of 2nd story extension, with portable ladder maintained on roof of extension on further condition that iron balcony and 60 degree stairs shall be provided on the rear of the 2nd story to the yard of adjoining premises, with egress therefrom through adjoining tenement house yards to the street; and granted only so long as conditions as to occupancy and use remain unchanged.

333-25-S.

PETITIONER—Serafino Geraci, for Vonhof Realty Corporation, owner.

SUBJECT—Variation of labor law as cited in decision of health commissioner.

PREMISES AFFECTED—29 Stanton street, Manhattan.

APPEARANCES—

For Petitioner: Peter Chieffa.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

THE RESOLUTION:

(333-25-S)

WHEREAS, Serafino Geraci, for Vonhof Realty Corporation, owner, filed, March 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the department of health, affecting premises 29 Stanton street, Manhattan; and

WHEREAS, the decision of the department of health, rendered March 13, 1925, reads:

"In answer to your inquiry, you are hereby notified that your application for a Sanitary Certificate to operate a cellar bakery at 29 Stanton St., New York City, has been denied by the Board of Health, for the reason that the said cellar does not conform to the requirements of Section 338 of Article 12 of the Labor Law of the State of New York.";

and

WHEREAS, the building is non-fireproof, five stories in height, 33 ft. by 60 ft. in area. OCCUPIED: Cellar, bakery; upper stories, store and dwellings, four families per story; the bakery, which is situated in the rear of the cellar, being 8 ft. 6 in. in height, ventilated to an open

MINUTES

ard area by a 3 ft. by 5 ft. window and two 2 ft. 3 in. by ft. windows; the ceiling of the cellar is fireproof; the bakery being separated from the remainder of the cellar by 8 in. brick walls; EGRESS from bakery by fireproof door to steps leading to yard and to fireproof passageway to street; and

WHEREAS, petitioner has submitted a letter from tenement house department showing that the bakery was in operation in the cellar of premises on February 1, 1907, and petitioner contends that the bakery has been operated continuously up to 1920 and closed on account of high cost of materials up to a year ago, and that he had no knowledge of the requirements of law as to certificate of exemption.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that not less than two (2) windows shall be maintained opening direct to the outer air at the rear of the bakery, and that the bakery shall not be extended in area.

37-25-S.

PETITIONER—David M. Jones, for Max Abrahams, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—537-539 Broadway and 108-110 Mercer street, Manhattan.

APPEARANCES—

For Petitioner: David M. Jones.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott . . . 8
Negative 0
Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

THE RESOLUTION:

(337-25-S)

WHEREAS, David M. Jones, for Max Abrahams, owner, filed, March 27, 1925, a petition, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 537-539 Broadway and 108-110 Mercer street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, Order No. 70334-LD, dated December 19, 1924, reads:

"1. Remove the substandard fire-escape on the Mercer Street side of building or reconstruct same as per Section 274 of the Labor Law and Rule 3 as amended by the Board of Standards and Appeals May 9th, 1924.

"NOTE:—Among the defects noted on this fire escape are the following: Windows on course not fireproof nor self-closing. No sign of any character shall be placed at openings leading to same. Fire-escape must be maintained structurally safe and properly painted."

and

WHEREAS, the building, facing on Broadway and also on Mercer street, is non-fireproof, five stories in height, 37 ft. by 200 ft. in area. OCCUPIED: 1st story, stores; upper stories, salesrooms and tenant factory, approximately 20 persons per story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior wooden stairways, each extending from 1st story to roof, enclosed in fire-retarding partitions with fire doors at openings. A sub-standard fire-escape with unprotected windows along the course thereof on the front of the building, extending from the top story (with gooseneck ladder to roof) to 1st story balcony, with counterbalanced stair to street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that sprinkler heads are located about 4 ft. from the windows along the course of the

fire escape, and that the fire escape would offer some advantage to firemen in the event of a fire in the premises.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that all the present sash, on the course of the fire escape, above the 1st story, shall be glazed with wire glass; that the top sash shall be fixed in all cases; that all windows shall be protected with sprinkler heads, not more than three (3) ft. distant therefrom.

273-25-S.

PETITIONER—Thomas B. Leahy, for William Kreinick & Co., Inc., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—131 West 45th street, Manhattan.

APPEARANCES—

For Petitioner: Thomas B. Leahy.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Holland, Connell, Fire Chief Kenlon, Superintendents Brady, Reville, Moore and McDermott 8
Negative 0
Absent: Messrs. Kennedy, Dowd, Gunnison, Deputy Fire Commissioner Hannon and Superintendent Kleinert 5

APPEARANCES—

(273-25-S)

WHEREAS, Thomas B. Leahy, for William Kreinick & Co., Inc., owner, filed, March 11, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 131 West 45th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered February 14, 1925, reads:

"1. A second means of exit must be provided in accordance with Section 270, sub-division 3 of the Labor Law.

"2. The present interior stairway must be extended direct to street enclosed in fireproof partitions."

and

WHEREAS, the building is non-fireproof, four stories and mezzanine in height, 20 ft. by 100 ft. in area in the 1st story and 20 ft. by 90 ft. in area above. OCCUPIED: Stores, showrooms and 25 per cent manufacturing; the means of EGRESS consisting of an interior fireproof stairway extending from the 1st story to the roof, enclosed in fireproof partitions with self-closing fireproof doors at the openings, a 45 degree fire escape on the rear of the building extending from the 2nd story level to the roof, with egress at the 2nd story level by stairs to a mezzanine fireproof passageway connecting with the interior stairs and thence through an open vestibule (with show windows at each side) to street, the vestibule being separated from the remainder of the 1st story by fireproof partitions; and

WHEREAS, it is proposed to provide on the roof of the extension at the rear of the building at the 2nd story level a gate in the fence separating the extension roof from the roofs of the adjoining one-story extensions of buildings to the east and west; and

WHEREAS, petitioner contends that the passageway to the street is open and unobstructed and that the presence of the show windows does not create any hazard, that the proposed additional means of egress from the fire escape provides adequate egress.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted,

MINUTES

as to Item No. 1, *on condition* that a standard fire escape shall be provided on the rear of the premises, from the roof to the 2nd story extension, with egress therefrom over roofs of adjoining premises to the east and west; and also through fireproof passageway, leading directly to the main stairs on the front of the building; *granted*, as to Item No. 2, *on condition* that the stairs shall lead directly to the open store front arcade, separated from the interior of the building by a wall of approved masonry; *granted* only so long as conditions as to occupancy and use remain unchanged.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 1, 1920, under Cal. No. 153-20-S.
The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.
The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.
The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

NOTICE

CITY OF NEW YORK

BOARD OF ESTIMATE AND APPORTIONMENT

AMENDMENT TO SECTION 21, BUILDING ZONE RESOLUTION

(Adopted May 22, 1925)

"No gasoline service station may be erected or extended on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance to a public school; and in no case within a distance of 200 ft. from the nearest exit from or entrance to a public school. This protection shall also apply to duly organized schools for children under 16 years of age, giving regular instruction at least five days a week for eight months or more each year, owned and operated by any established religious body or educational corporation."

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, June 26, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

res shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and fire hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.
